It is common in modern society that many people who are more knowledgeable and capable than others finally lost some good opportunities for development because they didn't obtain the XSOAR-Engineer Certification. The prerequisite for obtaining the XSOAR-Engineer certification is to pass the exam, but not everyone has the ability to pass it at one time. Because of not having appropriate review methods and review materials, or not grasping the rule of the questions, so many candidates eventually failed to pass even if they have devoted much effort.

## Palo Alto Networks XSOAR Engineer Sample Questions (Q98-Q103):

### NEW QUESTION # 98

What is the default task type when creating an empty task?

- A. Standard (Automated)
- B. Standard (Manual)
- C. Section header
- **D. Conditional**

**Answer: D**

Explanation:

Reference: <https://docs.paloaltonetworks.com/cortex/cortex-xsoar/5-5/cortex-xsoar-admin/playbooks/playbook-tasks/playbook-task-fields.html>

### NEW QUESTION # 99

What does the outgoing mapper support?

- A. Dynamic fields
- B. Classification
- C. Mirroring
- **D. Pre-processing**

**Answer: D**

Explanation:

Reference: <https://xsoar.pan.dev/docs/incidents/incident-classification-mapping>

### NEW QUESTION # 100

An engineer creates a script to display data in markdown format for a layout. When configuring the layout, the new script is not listed.

Which missed configuration step will cause this behavior?.

- A. Ensuring the script has the necessary permissions.
- **B. Tagging the script with Dynamic Section.**
- C. Adding the snippet as an integration command.
- D. Using a markdown output type.

**Answer: B**

Explanation:

The XSOAR Layouts documentation states that scripts can appear inside incident layouts only when they are designated as Dynamic Section scripts. Dynamic Sections are special script types that run automatically within layouts to display enrichment data, contextual summaries, or markdown-rendered information.

When creating such a script, the developer must mark it with the "dynamic-section" tag; otherwise, XSOAR does not expose it as an option during layout configuration. Without this mandatory tag, the script is treated as an ordinary automation and therefore cannot be placed into layout components.

Permissions (option B) affect script execution but do not prevent it from appearing in the layout editor.

Integration commands (option C) are unrelated-dynamic sections do not use integration command definitions. Markdown output type (option D) determines formatting only and does not affect whether the script is selectable within the layout editor.

Thus, the missing configuration step is failing to tag the script as a Dynamic Section, making option A the correct answer according to the official XSOAR documentation.

### NEW QUESTION # 101

Which development languages are supported when creating XSOAR automation scripts?

- A. Python, Powershell, Javascript
- B. C++, Python, Powershell
- C. Javascript, Powershell, C++
- D. Ruby, C++, Python

Answer: A

### NEW QUESTION # 102

In which two scenarios would it be appropriate to implement a loop for a sub-playbook? (Choose two.)

- A. In repetitive process flows with no more than 10 loops
- B. In repetitive processes that requires sub-playbook re-execution
- C. When continuously ingesting incidents from third-party systems
- D. In repetitive process flows to iterate for each playbook input

Answer: C,D

### NEW QUESTION # 103

.....

Our services before, during and after the clients use our XSOAR-Engineer certification material are considerate. Before the purchase, the clients can download and try out our XSOAR-Engineer learning file freely.
