NEW QUESTION # 217

A company will retire a legacy application in one year but wants to decommission the physical environment now. Which migration method is best?

- A. Taking a backup and shutting down the server
- B. Deploying all components using PaaS
- C. Relocating the server to a colocated data center
- D. Performing a physical-to-virtual conversion and hosting on IaaS

Answer: D

Explanation:
CompTIA A+ emphasizes virtualization as an ideal solution during system phase-out or transition periods.
The correct approach here is a P2V (physical-to-virtual) conversion and hosting the server in an Infrastructure as a Service (IaaS) environment. This removes the need for physical hardware while still keeping the application operational for its final year. IaaS provides full control over OS and applications, making it suitable for legacy systems that cannot be rewritten.
Colocation (Option A) still requires physical hardware. PaaS (Option C) is inappropriate because PaaS requires rewriting or replatforming the application. Shutting down the server after a backup (Option D) makes the application immediately unusable. Thus, the best method is to convert to a virtual machine and host it on IaaS.

- A. Toner
- B. Drum
- C. Rollers
- D. Fuser

Answer: A

Explanation:
Streaks and multiple lines on print jobs are commonly caused by an issue with the toner cartridge, such as a damaged or improperly installed cartridge. The technician should replace the toner first as it is the most likely and simplest component to check.

NEW QUESTION # 219
A user is testing a new OS that is contained on a USB drive. The user wants the new OS to load automatically when the computer is turned on. Which of the following should the user configure?

- A. Trusted Platform Module
- B. Boot options
- C. USB permissions
- D. BIOS password

Answer: B

Explanation:
To boot from a USB drive, the user must configure the boot order in the system BIOS/UEFI to prioritize the USB device. This setting tells the computer to load the operating system from the USB device on startup.
From CompTIA A+ 220-1101 Official Study Guide, Objective 3.5 - Configure BIOS/UEFI settings:
"The boot order determines the sequence in which the system firmware attempts to find an OS to boot. Setting USB as the first boot device allows the computer to boot from a USB drive." Verified Source:
