

Latest Salesforce Analytics-Arch-201 Exam Testking - Exam Analytics-Arch-201 Questions Fee

What's more, part of that Pass4SureQuiz Analytics-Arch-201 dumps now are free: https://drive.google.com/open?id=1ZRL_JGgvIDp3jM23Jkrw4NQhWc0mcOh

The social environment is constantly changing, and our Analytics-Arch-201 guide quiz is also advancing with the times. The content of Analytics-Arch-201 exam materials is constantly updated. You can save a lot of time for collecting real-time information. In order to ensure that you can see the updated Analytics-Arch-201 practice prep as soon as possible, our system sends the updated information to your email address first timing. In order to avoid the omission of information, please check your email regularly.

Salesforce Analytics-Arch-201 Exam Syllabus Topics:

Topic	Details

Topic 1	<ul style="list-style-type: none"> Deploy Tableau Server: This domain assesses the ability of Tableau Administrators to perform production-ready deployments of Tableau Server. It encompasses installing and configuring Tableau Server with external components, supporting air-gapped environments, disaster recovery validations, and blue-green deployments. It includes configuring and troubleshooting various authentication methods such as SAML, Kerberos, and LDAP. The section also covers implementing encryption strategies, installing and verifying Tableau Server on Linux and Windows platforms, resolving installation and configuration issues, and managing service accounts and logging.
Topic 2	<ul style="list-style-type: none"> Monitor and Maintain a Tableau Deployment: This section evaluates skills of Tableau Administrators in monitoring, maintaining, and optimizing Tableau environments. It involves creating custom administrative dashboards, conducting load testing using tools like TabJolt, and analyzing test results. Troubleshooting complex performance bottlenecks in workbooks and server resources is key, as is tuning caching and scaling strategies. It covers leveraging observability tools such as the Resource Monitoring Tool, analyzing logs and metrics, and adjusting architecture accordingly. Automation of maintenance functions using APIs, scripting, and scheduling is included, along with managing server extensions, content automation, dashboard extensions, web data connectors, and secure embedded solutions.
Topic 3	<ul style="list-style-type: none"> Design a Tableau Infrastructure: This section of the exam measures skills of Tableau Consultants and focuses on planning and designing a complex Tableau deployment. It covers gathering user requirements, licensing strategies including Authorization-to-Run, high availability and disaster recovery planning, and mapping server add-ons to the organization's needs. It includes planning and implementing Tableau Cloud with Bridge, authentication, user provisioning, and multi-site configuration. Additionally, it addresses migration planning across Tableau products, operating systems, identity stores, and consolidations, as well as designing process topologies, sizing, node roles, and recommending server configurations including security, hardware, and disaster recovery.

Exam Analytics-Arch-201 Questions Fee - Analytics-Arch-201 Reliable Dumps Sheet

False Analytics-Arch-201 practice materials deprive you of valuable possibilities of getting success. As professional model company in this line, success of the Analytics-Arch-201 training guide will be a foreseeable outcome. Even some nit-picking customers cannot stop practicing their high quality and accuracy. We are intransigent to the quality issue and you can totally be confident about their proficiency sternly. Choosing our Analytics-Arch-201 Exam Questions is equal to choosing success.

Salesforce Certified Tableau Architect Sample Questions (Q189-Q194):

NEW QUESTION # 189

A healthcare provider with multiple locations is implementing Tableau and needs to ensure data availability in the event of a system failure. What is the most appropriate strategy for their needs?

- A. Avoid investing in disaster recovery infrastructure to reduce costs
- B. Utilize manual processes for disaster recovery to maintain data control
- C. Implement a geographically dispersed disaster recovery setup for the Tableau deployment**
- D. Focus on high availability within a single location without offsite disaster recovery

Answer: C

Explanation:

Implement a geographically dispersed disaster recovery setup for the Tableau deployment. This strategy ensures that in case of a system failure at one location, the data and services can be quickly restored from another geographical location, which is crucial for maintaining continuous healthcare services. Option A is incorrect because avoiding disaster recovery infrastructure exposes the provider to significant risks of data loss and service disruption. Option B is incorrect as it does not provide a safeguard against disasters that could affect the single location. Option D is incorrect because manual processes are not efficient or reliable enough for the critical data and operational needs of a healthcare provider.

NEW QUESTION # 190

For a small startup with limited IT resources, which identity store and authentication configuration would be most suitable for their new Tableau Server deployment?

- A. Integrating with an external enterprise-level identity provider, regardless of the cost
- B. Using Tableau Server's built-in local identity store for simplicity and ease of management
- C. Implementing a complex LDAP-based system for future scalability
- D. Requiring users to have separate credentials for Tableau Server, unrelated to other systems

Answer: B

Explanation:

Using Tableau Server's built-in local identity store for simplicity and ease of management For a small startup with limited resources, using Tableau Server's built-in local identity store offers a simple and manageable solution, avoiding the complexity and cost of more advanced systems. Option A is incorrect as a complex LDAP system might be too resource-intensive for a small startup. Option C is incorrect because integrating with an external enterprise-level provider might be unnecessary and costly for a small team. Option D is incorrect because requiring separate credentials can lead to inefficient user management and a poor user experience.

NEW QUESTION # 191

In planning the migration of their Tableau Server from an Active Directory-based identity store to an LDAP-based system, what should be the primary focus to maintain user access and security?

- A. Ensuring that user roles and permissions are accurately mapped and transferred to the new LDAP system
- B. Completing the migration in the least possible time without testing
- C. Migrating user passwords directly from Active Directory to LDAP
- D. Relying on default settings in LDAP without custom configurations

Answer: A

Explanation:

Ensuring that user roles and permissions are accurately mapped and transferred to the new LDAP system Accurate mapping and transfer of user roles and permissions are critical for maintaining access control and security in the new LDAP system, ensuring seamless user experience and data protection. Option A is incorrect because user passwords typically cannot be directly migrated due to security protocols. Option C is incorrect as LDAP configurations may need customization to meet the specific needs of the organization. Option D is incorrect because rushing the migration without adequate testing can lead to significant security and access issues.

NEW QUESTION # 192

An organization with a large volume of real-time data needs to integrate this data with Tableau. When is it appropriate to use external services in this scenario?

- A. Implement external services for real-time data processing and streaming before integrating with Tableau
- B. External services should only be used for historical data, not for real-time data
- C. Avoid using external services and rely solely on Tableau Server for real-time data processing
- D. Use external services to store all the real-time data, regardless of its relevance to Tableau

Answer: A

Explanation:

Implement external services for real-time data processing and streaming before integrating with Tableau For handling large volumes of real-time data, using external services for initial processing and streaming can be more efficient, allowing Tableau to effectively integrate and visualize the processed data. Option A is incorrect as it's inefficient to use external services for storing all data, especially if not all of it is relevant for Tableau. Option C is incorrect because relying solely on Tableau Server may not be efficient for large-scale real-time data processing. Option D is incorrect as external services can be valuable for both real-time and historical data, depending on the use case.

NEW QUESTION # 193

A company using Tableau Cloud experiences intermittent performance issues, particularly during peak usage times. What should be the first step in troubleshooting these issues?

- A. Reducing the number of dashboards available to users to decrease load
- **B. Analyzing user access patterns and resource utilization to identify bottlenecks**
- C. Immediately upgrading the company's internet connection
- D. Increasing the number of Tableau Cloud instances without analyzing usage patterns

Answer: B

Explanation:

Analyzing user access patterns and resource utilization to identify bottlenecks This approach involves a methodical analysis to understand the root cause of performance issues, focusing on how and when the resources are being utilized. Option A is incorrect because increasing cloud instances without understanding the issue may not resolve the problem and could lead to un-necessary costs. Option C is incorrect as upgrading the internet connection might not address the underlying issue within Tableau Cloud's configuration. Option D is incorrect because reducing the number of dashboards does not directly address the issue of performance during peak times and might hinder business operations.

NEW QUESTION # 194

.....

Our professional experts have compiled the Analytics-Arch-201 exam questions carefully and skillfully to let all of our worthy customers understand so that even an average candidate can learn the simplified information on the syllabus contents and grasp it to ace exam by the first attempt. It is the easiest track that can lead you to your ultimate destination with our Analytics-Arch-201 Practice Engine. And as our pass rate of the Analytics-Arch-201 learning guide is high as 98% to 100%, you will pass the exam for sure.
