XSOAR-Engineer Valid Test Topics - XSOAR-Engineer Latest Test Fee

XSOAR-Engineer certifications establish your professional worth beyond your estimation. Procuring XSOAR-Engineer certification is to make sure an extensive range of opportunities in the industry and doubling your present earning prospects. DumpStillValid' XSOAR-Engineer Practice Test dumps provide you the best practical pathway to obtain the most career-enhancing, XSOAR-Engineer certification.

Palo Alto Networks XSOAR Engineer Sample Questions (Q17-Q22):

NEW QUESTION # 17

Which two components have their own context data? (Choose two.)

- A. Task
- B. Field
- C. Sub-playbook
- D. Incident

Answer: C,D

NEW QUESTION # 18

Within the playbook editor, which function allows a user to associate a task output to an incident field?.

- A. Inputs.
- B. Extend context.
- C. Mapping.
- D. Classification.

Answer: B

Explanation:

The XSOAR Playbook Editor allows engineers to manipulate and transform context data dynamically.

According to the XSOAR Admin and Playbook Development Guides, "Extend Context" is the dedicated mechanism that enables a task to save output values into new or existing context keys, including keys that correspond to incident fields. By defining a key under the "Extend Context" section, the playbook task can map specific outputs-such as JSON fields, strings, arrays, or nested objects-to a structured location within the incident context. These keys can then be used to populate incident fields through further playbook tasks, field mappings, or automated incident field updates.

Classification (option A) applies only during ingestion and cannot assign task outputs to incident fields. Inputs (option B) define what data a task receives, not how it is stored afterward. Mapping (option D) belongs to the ingestion pipeline and determines how event fields become incident fields during creation, not during playbook execution.

Therefore, Extend Context is the correct feature that allows a task to associate its output with incident fields, making option C the correct answer based on documentation.

NEW QUESTION # 19

Based on the images below,

1 Get

2 Filter (Get subset of the data, e.g. File.Type is PDF) Persons.friends
Where all of the following are true for Persons.friends

Persons.friends Not in Persons.family

3 Apply transformers on the field (Optional)

ReverseList

FirstArrayElement

ParseJSON

Get field (field: name)

+ Add transformer

```

1 - Persons: [
2   _id: "68408caf6b513c7661cea7b2"
3   age: 29
4   eyeColor: "green"
5   family: [
6     0: [{"name":"Jane McBride","age":23}]
7     1: [{"name":"Hubbard Wilcox","age":34}]
8     2: [{"name":"Selma Moon","age":55}]
9   ]
10  friends: [
11    0: [{"name":"Richardson Morales","age":28}]
12    1: [{"name":"Michael Henderson","age":31}]
13    2: [{"name":"Hubbard Wilcox","age":34}]
14  ]
15  isActive: false
16  name: "Heather Hayes"
17 ]

```

what will be the result of the Filters and Transformers?.

- A. Michael Henderson.
- B. Selma Moon.
- C. Richardson Morales.
- D. Hubbard Wilcox.

Answer: A

NEW QUESTION # 20

What is an example of a generic reputation command?

- A. !getReputation
- B. !enrichIndicator
- C. !reputation
- D. !ip

Answer: C

NEW QUESTION # 21

In which two scenarios would it be appropriate to implement a loop for a sub-playbook? (Choose two.)

- A. In repetitive processes that requires sub-playbook re-execution
- B. In repetitive process flows to iterate for each playbook input
- C. In repetitive process flows with no more than 10 loops
- D. When continuously ingesting incidents from third-party systems

Answer: B,D

NEW QUESTION # 22

.....

When you get the XSOAR-Engineer study practice, do not think it is just the exam questions & answers. We provide you with the most accurate training material and guarantee for pass. The Palo Alto Networks XSOAR-Engineer explanations is together with the

vapes
