C1000-185 Study Guide: IBM watsonx Generative AI Engineer - Associate & C1000-185 Dumps Torrent & C1000-185 Latest Dumps

The study material provided to the customers is available in three different formats. The first one is PDF (Portable Document Format). It is commonly used for quick preparation. Customers can access the IBM C1000-185 Pdf Dumps anywhere anytime on their smartphones, tablets, and laptops to prepare for IBM C1000-185 certification exam in a short time.

IBM watsonx Generative AI Engineer - Associate Sample Questions (Q188-Q193):

NEW QUESTION # 188
You are creating a prompt template for a generative AI model that helps technical support staff troubleshoot customer issues based

on symptoms provided. The goal is to generate a clear, step-by-step diagnostic process.
What elements would improve the effectiveness of the template? (Select two)

- A. Set a high temperature value to explore more creative diagnostic approaches
- B. Provide explicit instructions to break the response into steps
- C. Include an instruction to ask clarifying questions when the issue is unclear
- D. Incorporate complex technical jargon to ensure expert-level responses
- E. Ask the model to generate multiple diagnostic paths for each issue

Answer: B,C

NEW QUESTION # 189
In the context of prompt engineering, how does the repetition penalty parameter influence the behavior of a generative AI model, and which of the following scenarios demonstrates its correct usage?

- A. A repetition penalty of 0.5 is ideal for generating creative text, as it promotes repetition of key phrases for emphasis
- B. A repetition penalty higher than 1.0 will discourage the model from repeating the same words or phrases, while a value lower than 1.0 encourages repetition
- C. Setting the repetition penalty to 1.0 disables any influence on repetition and allows the model to generate text without penalizing previously used tokens
- D. A repetition penalty of 1.0 encourages the model to introduce more varied word choices in its output

Answer: B

NEW QUESTION # 190
You are working on generating creative text responses using IBM watsonx's generative AI model. You need to adjust the output so that it is more diverse and creative without losing coherence.
Which of the following model parameter settings would best achieve this objective?

- A. Set temperature to 0.2
- B. Set temperature to 2
- C. Set temperature to 1.5
- D. Set temperature to 0

Answer: C

NEW QUESTION # 191
Your team is responsible for deploying a generative AI system that will interact with customers through automated chatbots. To improve the quality and consistency of responses across different queries and customer profiles, the team has developed several prompt templates. These templates aim to standardize input to the model, ensuring that outputs are aligned with business objectives.
However, the team is debating whether using these prompt templates will provide tangible benefits in the deployment.
What is the primary benefit of deploying prompt templates in this AI system?

- A. Improving the scalability of the system by allowing the model to handle more diverse inputs without requiring additional fine-tuning.
- B. Reducing the overall inference time by streamlining the input-output process for the model, ensuring faster responses.
- C. Enhancing the model's ability to generalize across unseen data by training it specifically on the variations included in the prompt template.
- D. Enabling more predictable and consistent outputs across different inputs, aligning the model's responses more closely with the business goals.

Answer: D

NEW QUESTION # 192
You are tasked with deploying two generative AI systems: one for document summarization and another for question-and-answer (Q&A). Both systems need to handle large volumes of unstructured text, but they differ in their response time requirements and

interaction with users.
Which deployment strategy would be most appropriate for this scenario?

- A. Deploy both systems as a single pipeline, with the summarization model providing input to the Q&A model to improve the quality of answers.
- B. Use a rule-based model for summarization and a machine learning-based model for Q&A, combining them into a single service endpoint for deployment.
- C. Use a single deployment strategy where both the summarization and Q&A systems are integrated into a shared model that processes all requests through the same inference pipeline.
- D. Deploy the summarization model as a batch processing system, while the Q&A system is deployed as an on-demand service using a low-latency inference model.

Answer: D
