New ISTQB CT-UT Exam Testking - CT-UT Test Sample Questions

For further and better consolidation of your learning on our CT-UT exam questions, our company offers an interactive test engine-Software test engine. And this version is also popular for the advantage of simulating the real CT-UT exam. Please pay attention to the point that the Software version of our CT-UT preparation guide can only apply in the Windows system. When you are practicing

with it, you will find that every time you finished the exam, the exam scores will come out.

ISTQB Certified Tester Usability Tester Sample Questions (Q19-Q24):

NEW QUESTION # 19

Which of the following statements about usability test scripts is wrong?

- A. It contains post-session interview questions.
- B. It is a checklist used by the moderator of a usability test.
- **C. It contains answers to the test questions.**
- D. It contains pre-session interview questions.

Answer: C

Explanation:

A usability test script is a structured document used by the moderator to ensure consistency across test sessions. It typically includes pre-session briefing text, pre- and post-session interview questions, and the specific usability tasks to be performed. However, it does not include answers to the test questions, as usability tests focus on observing user behavior and performance-not testing users' knowledge. Providing answers would bias results and invalidate findings. Thus, option D is incorrect and the best choice.

ISO 25062 - Guidelines for Usability Reporting

#####

NEW QUESTION # 20

You are asked to evaluate the usability of a software application for a law firm. Due to time and budget constraints, it is not possible to include users in the evaluation process.

Which of the following is a valid approach for evaluating the usability in this case?

- A. Usability testing
- **B. Usability Review**
- C. Accessibility Evaluation
- D. User surveys

Answer: B

Explanation:

When actual users cannot be included, a usability review (often an expert or heuristic evaluation) is the most practical method.

Trained evaluators examine the interface against usability principles and standards to identify potential issues. Surveys require user input, and usability testing cannot proceed without users.

Accessibility evaluation targets inclusivity for users with impairments, which is related but not a substitute for overall usability evaluation. Therefore, option A is the only valid method under these constraints.

Nielsen Norman Group: Heuristic Evaluation

Usability.gov: Expert Reviews and Inspections

ISO 9241-110 - Usability Principles

NEW QUESTION # 21

You're defining usability test tasks for a web shop for mobile phones and smartphones. Finding out whether users are able to place an order easily has been identified as the main goal of the usability test.

Which of the following is a reasonable task definition to include in the test?

- A. Enter the item number "1469483" in the search box and click "OK". Put the first item in the cart by clicking "add to bag". Then, click on "checkout" in order to start the order process. After that, fill in the form and click on "submit".
- B. Which mobile operating system do you prefer?
- C. Put the first phone you find in your shopping cart!
- **D. Your phone broke and you're looking for a new smartphone. Your budget is 200\$ and it should have an infrared sensor as you like to operate your home entertainment system with it. Find a suited smartphone and order it!**

Answer: D

Explanation:

Option B represents a realistic, goal-oriented scenario that reflects how an actual user would interact with the website. It incorporates context, user intent, constraints, and desired outcome-all characteristics of well- designed usability tasks. Option A is vague and lacks real-world motivation. Option C is too prescriptive and limits insight into user behavior, while D is a survey question, not a usability task. According to Nielsen Norman Group and ISO 25062, the best usability tasks are scenario-based, realistic, and outcome-driven- making B the correct answer.

Nielsen Norman Group: Writing Effective Usability Tasks

Usability.gov: Scenario-Based Usability Tasks

ISO 25062 - Usability Test Reporting

#####

NEW QUESTION # 22

You're conducting a user survey and you have reached the third stage, selecting an appropriate questionnaire.

You have decided to use a standardized questionnaire as you want to benchmark against previous usability measurements.

Which of the following user questionnaires allow benchmarking against previous usability measurements?

i. SUS

ii. SUMI

iii. WAMMI

- A. i & ii are true, iii is false
- B. i is true, ii & iii are false
- C. ii & iii are true, i is false
- **D. i, ii and iii are true**

Answer: D

Explanation:

SUS (System Usability Scale), SUMI (Software Usability Measurement Inventory), and WAMMI (Website Analysis and Measurement Inventory) are all validated, standardized usability questionnaires that support benchmarking. They allow comparison against known usability scores from a wide variety of systems. These instruments provide numeric scores that can be interpreted using benchmark datasets or industry standards.

Therefore, all three-i, ii, and iii-are true, making D the correct answer.

Here are the verified answers and detailed explanations for Questions 22 through 25, formatted in your specified structure:

#####

NEW QUESTION # 23

Which of the following is the correct distinction between formative and summative usability evaluation?

- A. Summative evaluations focus on improvement, formative evaluations assess the outcome
- B. Summative evaluations mostly rely on experts, formative evaluations require users
- **C. Summative evaluations assess the outcome, formative evaluations focus on improvement**
- D. Summative evaluations mostly rely on user tests, formative evaluations require experts

Answer: C

Explanation:

Formative usability evaluation is conducted during the development process to identify usability problems and improve the product iteratively. It is diagnostic and improvement-focused. Summative evaluation, on the other hand, is done after development to assess the final product's usability, measuring how well it meets defined usability goals. Therefore, the correct distinction is that formative evaluation focuses on improvement, and summative evaluation assesses the outcome. This distinction aligns with widely accepted models such as those defined by ISO 9241-210 and usability.gov.
