

# Quiz Fantastic GH-500 - Dumps GitHub Advanced Security Free

P.S. Free 2026 Microsoft GH-500 dumps are available on Google Drive shared by Pass4training: [https://drive.google.com/open?id=1pj0b\\_\\_rxJTFcme-r9OrfX05TyaS\\_jQ\\_Q](https://drive.google.com/open?id=1pj0b__rxJTFcme-r9OrfX05TyaS_jQ_Q)

The study system of our company will provide all customers with the best study materials. If you buy the GH-500 latest questions of our company, you will have the right to enjoy all the GH-500 certification training materials from our company. By updating the study system of the GH-500 Training Materials, we can guarantee that our company can provide the newest information about the exam for all people. We believe that getting the newest information about the exam will help all customers pass the GH-500 exam easily.

You should figure out what kind of GH-500 test guide is most suitable for you. We here promise you that our GH-500 certification material is the best in the market, which can definitely exert positive effect on your study. Our GH-500 learn tool create a kind of relaxing learning atmosphere that improve the quality as well as the efficiency, on one hand provide conveniences, on the other hand offer great flexibility and mobility for our customers. And we believe you will love our GH-500 Exam Questions if you can free download the demo of our GH-500 learning guide.

## Excellent Dumps GH-500 Free | GH-500 100% Free Valid Exam Practice

Some people worry that our aim is not to GitHub Advanced Security guide torrent but to sell their privacy information to the third part to cause serious consequences. But we promise to you our privacy protection is very strict and we won't sell the client's privacy to others for our own benefits. Our aim to sell the GH-500 test torrent to the client is to help them pass the exam and not to seek illegal benefits. For that time is extremely important for the learners, everybody hope that they can get the efficient learning. So clients can use our GH-500 Test Torrent immediately is the great merit of our product. When you begin to use, you can enjoy the various functions and benefits of our product such as it can simulate the exam and boosts the timing function.

## Microsoft GitHub Advanced Security Sample Questions (Q83-Q88):

### NEW QUESTION # 83

Where can you use CodeQL analysis for code scanning? Each answer presents part of the solution. (Choose two.)

- A. in the Files changed tab of the pull request
- B. in an external continuous integration (CI) system
- C. in a third-party Git repository
- D. in a workflow

Answer: B,D

Explanation:

In a workflow: GitHub Actions workflows are the most common place for CodeQL code scanning.

The codeql-analysis.yml defines how the analysis runs and when it triggers.

In an external CI system: GitHub allows you to run CodeQL analysis outside of GitHub Actions.

Once complete, the results can be uploaded using the upload-sarif action to make alerts visible in the repository.

You cannot run or trigger analysis from third-party repositories directly, and the Files changed tab in pull requests only shows diff-not analysis results.

#### NEW QUESTION # 84

What does code scanning do?

- A. It analyzes a GitHub repository to find security vulnerabilities
- B. It prevents code pushes with vulnerabilities as a pre-receive hook
- C. It scans your entire Git history on branches present in your GitHub repository for any secrets
- D. It contacts maintainers to ask them to create security advisories if a vulnerability is found

**Answer: A**

Explanation:

Code scanning is a static analysis feature that examines your source code to identify security vulnerabilities and coding errors. It runs either on every push, pull request, or a scheduled time depending on the workflow configuration.

It does not automatically contact maintainers, scan full Git history, or block pushes unless explicitly configured to do so.

#### NEW QUESTION # 85

You have enabled Dependabot alerts on your repository. If Dependabot detects a vulnerable dependency, it sends an alert when:

- A. a contributor adds the vulnerable dependency to a manifest in the repository.
- B. manifests and lock files are out of date and a version needs to be updated.
- C. the vulnerability is removed from the GitHub Advisory Database.
- D. a contributor makes a change to a function in the code.

**Answer: A**

Explanation:

Detection of insecure dependencies

Dependabot performs a scan of the default branch of your repository to detect insecure dependencies, and sends Dependabot alerts when:

\* A new advisory is added to the GitHub Advisory Database.

\* The dependency graph for a repository changes. For example, when a contributor pushes a commit to change the packages or versions it depends on, or when the code of one of the dependencies changes.

Additionally, GitHub can review any dependencies added, updated, or removed in a pull request made against the default branch of a repository, and flag any changes that would reduce the security of your project. This allows you to spot and deal with vulnerable dependencies before, rather than after, they reach your codebase.

Note: When you push a commit to GitHub that changes or adds a supported manifest or lock file to the default branch, the dependency graph is automatically updated. In addition, the graph is updated when anyone pushes a change to the repository of one of your dependencies.

#### NEW QUESTION # 86

When using CodeQL, what extension stores query suite definitions?

- A. .ql
- B. .yaml
- C. .qll
- D. .qls

**Answer: D**

Explanation:

Query suite definitions in CodeQL are stored using the .qls file extension. A query suite defines a collection of queries to be run during an analysis and allows for grouping them based on categories like language, security relevance, or custom filters.

In contrast:

.ql files are individual queries.

.qll files are libraries used by .ql queries.

.yml is used for workflows, not query suites.

### NEW QUESTION # 87

In the pull request, how can developers avoid adding new dependencies with known vulnerabilities?

- A. Add Dependabot rules.
- B. Enable Dependabot security updates.
- C. Enable Dependabot alerts.
- D. Add a workflow with the dependency review action.

**Answer: D**

Explanation:

To detect and block vulnerable dependencies before merge, developers should use the Dependency Review GitHub Action in their pull request workflows. It scans all proposed dependency changes and flags any packages with known vulnerabilities.

This is a preventative measure during development, unlike Dependabot, which reacts after the fact.

### NEW QUESTION # 88

.....

Our GH-500 preparation exam can provide all customers with the After-sales service guarantee. The After-sales service guarantee is mainly reflected in our high-efficient and helpful service. We are glad to receive all your questions on our GH-500 Exam Dumps. If you have any questions about our GH-500 study questions, you have the right to answer us in anytime. Our online workers will solve your problem immediately after receiving your questions.
