### CompTIA A+ Certification Exam: Core 2 Sample Questions (Q546-Q551):

#### NEW QUESTION # 546

A technician needs to transfer a file to a user's workstation. Which of the following would BEST accomplish this task utilizing the workstation's built-in protocols?

- A. RMM
- B. MSRA
- C. VPN
- **D. SMB**

**Answer: D**

Explanation:

SMB stands for Server Message Block, which is a network file sharing protocol that allows applications on a computer to read and write to files and to request services from server programs in a computer network. SMB is a built-in protocol in Windows operating systems and can be used to transfer files between computers over a network. The technician can use SMB to access a file share on the user's workstation and copy the file to or from it. VPN stands for virtual private network, which is a technology that creates a secure and encrypted connection over a public network. VPN is not a built-in protocol in Windows operating systems and does not directly transfer files between computers. RMM stands for remote monitoring and management, which is a type of software solution that allows remote management and monitoring of devices and networks. RMM is not a built-in protocol in Windows operating systems and does not directly transfer files between computers. MSRA stands for Microsoft Remote Assistance, which is a feature that allows a user to invite another user to view or control their computer remotely. MSRA is not a protocol, but an application that uses Remote Desktop Protocol (RDP) to establish a connection. MSRA does not directly transfer files between computers.

#### NEW QUESTION # 547

Which of the following physical security controls can prevent laptops from being stolen?

- A. Multifactor authentication
- **B. Equipment lock**
- C. LoJack
- D. Encryption
- E. Bollards

**Answer: B**

Explanation:

An equipment lock is a physical security device that attaches a laptop to a fixed object, such as a desk or a table, with a cable and a lock. This can prevent the laptop from being stolen by unauthorized persons.

Encryption, LoJack, multifactor authentication and bollards are other security measures, but they do not physically prevent theft.

#### NEW QUESTION # 548

Which of the following scripting languages is the most commonly used for system administration on Windows operating systems?

- A. Python
- B. Bash
- C. PowerShell
- D. JavaScript

**Answer: C**

#### NEW QUESTION # 549

Which of the following file extensions are commonly used to install applications on a macOS machine? (Select THREE).

- A. .dmg
- B. .msi
- C. .deb
- D. .Pkg
- E. .apk
- F. .app
- G. .mac
- H. .appx

**Answer: A,D,F**

Explanation:

Explanation

<https://support.microsoft.com/en-us/windows/common-file-name-extensions-in-windows-da4a4430-8e76-89c5-5>

.pkg and .dmg are files used to distribute and install applications on macOS. .pkg files are installer packages that may contain multiple files and executable code, while .dmg files are disk images that can contain a single bundled application or multiple applications. .app files are typically the main executable files for macOS applications. The other options listed are file extensions for applications or installers on other platforms (such as .deb for Debian-based Linux systems, .msi for Windows, and .apk for Android). This information is covered in the CompTIA A+ Core2 documents/guide under the Mac OS section.

#### NEW QUESTION # 550

A technician is installing a new business application on a user's desktop computer. The machine is running Windows 10 Enterprise 32-bit operating system. Which of the following files should the technician execute in order to complete the installation?

- A. Installer\_x86.exe
- B. Installer\_Win10Enterprise.dmg
- C. Installer\_32.msi
- D. Installer\_x64.exe
- E. Installer\_Files.zip

**Answer: A**

Explanation:

The 32-bit operating system can only run 32-bit applications, so the technician should execute the 32-bit installer. The "x86" in the file name refers to the 32-bit architecture.
