Free PDF Quiz High Pass-Rate DS0-001 - CompTIA DataSys+ Certification Exam Exam Fee

In the era of information, everything around us is changing all the time, so do the DS0-001 exam. But you don't need to worry it. We take our candidates' future into consideration and pay attention to the development of our DS0-001 study training materials

constantly. Free renewal is provided for you for one year after purchase, so the DS0-001 Latest Questions won't be outdated. The latest DS0-001 latest questions will be sent to you email, so please check then, and just feel free to contact with us if you have any problem. Our reliable DS0-001 exam material will help pass the exam smoothly.

CompTIA DataSys+ Certification Exam Sample Questions (Q120-Q125):

NEW QUESTION # 120

A business analyst is using a client table and an invoice table to create a database view that shows clients who have not made purchases yet. Which of the following joins is most appropriate for the analyst to use to create this database view?

- A. INNER JOIN ON Client.Key = Invoice.Key
- B. RIGHT JOIN ON Client.Key = Invoice.Key WHERE BY Client.Key IS NOLL
- C. LEFT JOIN ON Client.Key = Invoice.Key WHERE BY Invoice.Key IS NOLL
- D. LEFT JOIN ON Client.Key = Invoice.Key

Answer: C

Explanation:

The join that is most appropriate for the analyst to use to create this database view is option D. This join uses the LEFT JOIN clause to combine the client table and the invoice table based on the matching values in the Key column. The WHERE clause filters out the rows where the Invoice.Key column is not null, meaning that the client has made a purchase. The result is a view that shows only the clients who have not made any purchases yet. The other options either do not produce the desired result or have syntax errors. For example, option A would show only the clients who have made purchases, option B would show only the invoices that do not have a matching client, and option C would show all the clients regardless of their purchase status. Reference: CompTIA DataSys+ Course Outline, Domain 1.0 Database Fundamentals, Objective 1.2 Given a scenario, execute database tasks using scripting and programming languages.

NEW QUESTION # 121

Which of the following qualifiers removes duplicate records from a SQL SELECT statement when included in a query?

- A. DISTINCT
- B. TOP 1
- C. SINGLE
- D. UNIQUE

Answer: A

NEW QUESTION # 122

A systems analyst receives an error report and wants to quickly switch the rows to columns in order to match the format required for analysis. Which of the following spreadsheet functions should the analyst use to make this change?

- A. VLookUp
- B. Concat
- C. Transpose
- D. Clean

Answer: C

Explanation:

The Transpose function switches rows to columns (or vice versa), enabling quick reformatting of data for analysis.

NEW QUESTION # 123

An on-premises application server connects to a database in the cloud. Which of the following must be considered to ensure data integrity during transmission?

- A. Masking
- B. Redundancy

- C. Encryption
- D. Bandwidth

Answer: C

Explanation:

The factor that must be considered to ensure data integrity during transmission is encryption.

Encryption is a process that transforms data into an unreadable or scrambled form using an algorithm and a key. Encryption helps protect data integrity during transmission by preventing unauthorized access or modification of data by third parties, such as hackers, eavesdroppers, or interceptors. Encryption also helps verify the identity and authenticity of the source and destination of the data using digital signatures or certificates. The other options are either not related or not sufficient for this purpose. For example, bandwidth is the amount of data that can be transmitted over a network in a given time; redundancy is the duplication of data or components to provide backup or alternative sources in case of failure; masking is a technique that replaces sensitive data with fictitious but realistic data to protect its confidentiality or compliance.

NEW QUESTION # 124

A database administrator needs to provide access to data from two different tables to multiple group users in order to facilitate ongoing reporting. However, some columns in each table are restricted, and users should not be able to see the values in these columns.

Which of the following is the best action for the administrator to take?

- A. Create a trigger.
- B. Create a .csv export.
- C. Create a stored procedure.
- D. Create a view.

Answer: D

Explanation:

The best action for the administrator to take is to create a view. A view is a virtual table that shows a subset of data from one or more tables. The administrator can use a view to provide access to data from two different tables to multiple group users without exposing the restricted columns. The view can also simplify the queries and improve the performance of the reporting process. The other options are either not suitable for this scenario or do not address the requirement of hiding some columns from users. For example, creating a stored procedure would require additional coding and execution, creating a csv export would create a static file that may not reflect the latest data changes, and creating a trigger would perform an action in response to an event rather than provide access to data.

NEW QUESTION # 125

.....

PassExamDumps provides you with the best preparation material. What makes PassExamDumps DS0-001 brain dumps the first choice for their exam preparation is obviously its superior content that beats its competitors in quality and usefulness.

PassExamDumps currently has a clientele of more than 60,000 satisfied customers all over the world. This is factual proof of the incomparable quality of our products. The way our brain dumps introduce you the syllabus contents of DS0-001 Exam increases your confidence to perform well in the actual exam paper.
