If you attend Microsoft certification GH-100 Exams, your choosing VCE4Plus is to choose success! I wish you good luck.

### Microsoft GH-100 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> <li>Support GitHub Enterprise for users and key stakeholders: This section of the exam measures skills of GitHub Enterprise Administrators and covers supporting users, identifying issues that can be resolved internally versus those needing GitHub Support, and generating support bundles and diagnostics. It also involves recognizing underutilized features, managing workflows like branching and pull requests, understanding CI</li> <li>CD strategies, recommending tooling, and extending capabilities through APIs or Marketplace apps.</li> </ul>

Topic 2	<ul style="list-style-type: none"> <li>• Enable secure software development and ensure compliance: This section of the exam measures skills of GitHub Enterprise Administrators and deals with applying GitHub's security and compliance capabilities. It covers policies, auditing, scrubbing sensitive data, secret scanning, code scanning with CodeQL, dependency management with Dependabot, and implementing security response plans. It also explores authentication tokens, app security policies, and enterprise managed users.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>• Describe how GitHub is deployed, distributed, and licensed: This section of the exam measures skills of GitHub Enterprise Administrators and highlights the deployment models of GitHub Enterprise Server, Enterprise Cloud, and GitHub AE. It covers licensing structures, billing for seat licenses and metered services, support options, and monitoring license usage across users and machine accounts.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>• Manage user identities and GitHub authentication: This section of the exam measures skills of DevOps Engineers and focuses on managing authentication and identity across organizations using SAML SSO, SCIM, and team synchronization. Candidates need to understand identity providers, user membership implications, authorization models, and enforcing security measures such as two-factor authentication.</li> </ul>
Topic 5	<ul style="list-style-type: none"> <li>• Manage GitHub Actions: This section of the exam measures skills of DevOps Engineers and emphasizes managing workflows, reusable actions, and distribution strategies within the enterprise. It explains configuring organization-level policies, managing self-hosted and GitHub-hosted runners, controlling access through IP allow lists, handling encrypted secrets, and integrating third-party vaults for workflow security.</li> </ul>

## Microsoft GitHub Administration Sample Questions (Q31-Q36):

### NEW QUESTION # 31

Which of the following is a key benefit of using GitHub Marketplace Apps in an enterprise?

- A. They guarantee no downtime during enterprise GitHub maintenance windows
- B. They often include integrations with external services, reducing the need for custom code
- C. All apps come pre-approved by GitHub's internal security team
- D. Apps eliminate the need for GitHub Actions entirely

**Answer: B**

Explanation:

GitHub Marketplace Apps come with built-in integrations to external services - so you can plug in things like CI servers, code-quality scanners, or deployment tools without writing and maintaining custom connectors.

### NEW QUESTION # 32

You want to ensure a secret is automatically available to only workflows in internal and private repositories in the organization. Where do you configure the required access policy?

- A. Organization secret
- B. Actions policies
- C. Runner groups
- D. Rulesets

**Answer: A**

Explanation:

You set the access policy on the Organization Secret itself - configuring its visibility so it's scoped automatically to only internal and private repositories.

### NEW QUESTION # 33

Which feature is unique to self-hosted runners?

- A. Automatic updates to the operating system

- B. GPU support
- **C. Execute scripts before and after a job**
- D. Dynamic scaling

**Answer: C**

Explanation:

Self-hosted runners support custom pre- and post-job scripts via runner hooks, letting you run arbitrary scripts before a job starts and after it finishes - capabilities not available on GitHub-hosted runners.

#### NEW QUESTION # 34

What is the key benefit of using a GitHub security advisory within a repository?

- A. It automatically reverts commits that introduced the vulnerability.
- **B. It allows maintainers to privately disclose, discuss, and publish vulnerabilities.**
- C. It flags all forks of the repository as vulnerable.
- D. It prevents users from cloning the repository until issues are resolved.

**Answer: B**

Explanation:

GitHub security advisories let maintainers privately disclose, discuss fixes, and then publish vulnerabilities in a controlled manner within the repository.

#### NEW QUESTION # 35

Which of the following GitHub token types supports fine-grained repository permissions AND is recommended for CI/CD automation?

- A. Personal Access Tokens (PATs)
- **B. GitHub App Installation Access Tokens**
- C. Device Tokens
- D. OAuth tokens

**Answer: B**

Explanation:

GitHub App Installation Access Tokens are privileged to the exact permissions you grant the App - down to individual repositories - and rotate automatically, making them the recommended choice for CI/CD automation workflows that demand least-privilege, fine-grained access.

#### NEW QUESTION # 36
