Study Splunk SPLK-2003 Test | Review SPLK-2003 Guide

Study Guide: Lección 2 Test

Content

- Lección 2 Vocabulario (p.80)
  - Quizlet: Vocabulary
- 2.1 Object pronouns (p.54-55)
  - SpanishDict: Object pronouns
- 2.2 Gustar and similar verbs (p.58-59)
  - Kahoot: Gustar verbs
  - Be sure to know the meanings of the *gustar* verbs on page 59
- 2.3 Reflexive verbs (p.62-63)
  - Be sure to know the meaning of the verbs on pages 62-63
  - Kahoot

Format

- ¿Cierto o falso? Vas a escuchar a Marco hablar sobre sus actividades. Indica si lo que dicen las oraciones es cierto o falso. (6pts.)
- Vocabulario. Completa las oraciones con la palabra correcta. (8pts.)
- Escoger. Selecciona las palabras adecuadas para completar las mini-conversaciones (2.1). (8pts.)
- Escoger. Selecciona la respuesta más lógica (2.2). (5pts.)
- Escribir. Describe el último concierto u obra de teatro que viste. Usa como mínimo cinco palabras de la lista (vocab). (5pts.)
- Preguntas. Contesta estas preguntas afirmativamente. Usa pronombres de complemento directo e indirecto. (5pts.)
- Tu ciudad. Escribe oraciones con verbos gustar según el prompt. (5pts.)
- Escribir. Describe lo que haces un típico lunes por la mañana. Usa como mínimo seis verbos reflexivos. (6pts.)

We offer you SPLK-2003 study guide with questions and answers, and you can practice it by concealing the answers, and when you have finished practicing, you can cancel the concealment, through the way like this, you can know the deficient knowledge for SPLK-2003 exam dumps, so that you can put your attention to the disadvantages. In addition, we also have the free demo for SPLK-2003 Study Guide for you to have a try in our website. These free demos will give you a reference of showing the mode of the complete version. If you want SPLK-2003 exam dumps, just add them into your card.

Splunk SPLK-2003 exam is designed to test an individual's proficiency in the administration of Splunk Phantom, a comprehensive security orchestration, automation, and response (SOAR) platform. Splunk Phantom Certified Admin certification is intended for IT professionals who are responsible for managing and maintaining Splunk Phantom in their respective organizations. By passing SPLK-2003 exam, candidates can demonstrate their expertise in deploying, configuring, and troubleshooting Splunk Phantom.

Splunk Phantom platform is a security automation and orchestration tool that helps organizations streamline their security operations. The platform allows organizations to automate repetitive tasks, respond to incidents quickly, and integrate with other security tools to create a comprehensive security solution. The Splunk SPLK-2003 Certification Exam is designed to ensure that certified administrators have the knowledge and skills necessary to manage the platform effectively.

2026 Splunk Reliable Study SPLK-2003 Test

It follows its goal by giving a completely free demo of real Splunk SPLK-2003 exam questions. The free demo will enable users to assess the characteristics of the Splunk SPLK-2003 Exam product. Exams4sures will provide you with free Splunk SPLK-2003 actual questions updates for 365 days after the purchase of our product.

The SPLK-2003 exam is a certification offered by Splunk, a leading provider of software solutions for machine data analysis. SPLK-2003 exam validates the knowledge and skills required to effectively manage and administer the Splunk Phantom platform. SPLK-2003 exam covers a wide range of topics, including Phantom architecture, installation and configuration, automation and playbook development, incident response management, and security operations center (SOC) integration. Candidates who pass the SPLK-2003 Exam will be recognized as Splunk Phantom Certified Admins, which demonstrates their expertise and proficiency in managing and deploying Splunk Phantom in a production environment.

Splunk Phantom Certified Admin Sample Questions (Q45-Q50):

NEW QUESTION # 45
A user wants to get the playbook results for a single artifact. Which steps will accomplish the?

- A. Use the contextual menu from the artifact and select the actions.
- B. Use the contextual menu from the artifact and select run playbook.
- C. Create a new container including Just the artifact in question.
- D. Use the run playbook dialog and set the scope to the artifact.

Answer: B

Explanation:
To get playbook results for a single artifact, a user can utilize the contextual menu option directly from the artifact itself. This method allows for targeted execution of a playbook on just that artifact, facilitating a focused analysis or action based on the data within that specific artifact. This approach is particularly useful when a user needs to drill down into the details of an individual piece of evidence or data point within a larger incident or case, allowing for granular control and execution of playbooks in the Splunk SOAR environment.

NEW QUESTION # 46
What are the components of the I2A2 design methodology?

- A. Inputs, Interactions, Apps, Artifacts
- B. Inputs, Interactions, Actions, Artifacts
- C. Inputs, Interactions, Actions, Assets
- D. Inputs, Interactions, Actions, Apps

Answer: B

Explanation:
I2A2 design methodology is a framework for designing playbooks that consists of four components:
*Inputs: The data that is required for the playbook to run, such as artifacts, parameters, or custom fields.
*Interactions: The blocks that allow the playbook to communicate with users or other systems, such as prompts, comments, or emails.
*Actions: The blocks that execute the core logic of the playbook, such as app actions, filters, decisions, or utilities.
*Artifacts: The data that is generated or modified by the playbook, such as new artifacts, container fields, or notes.
The I2A2 design methodology helps you to plan, structure, and test your playbooks in a modular and efficient way. Therefore, option B is the correct answer, as it lists the correct components of the I2A2 design methodology. Option A is incorrect, because apps are not a component of the I2A2 design methodology, but a source of actions that can be used in the playbook. Option C is incorrect, for the same reason as option A.
Option D is incorrect, because assets are not a component of the I2A2 design methodology, but a configuration of app credentials that can be used in the playbook.
1: Use a playbook design methodology in Administer Splunk SOAR (Cloud)
The I2A2 design methodology is an approach used in Splunk SOAR to structure and design playbooks. The acronym stands for Inputs, Interactions, Actions, and Artifacts. This methodology guides the creation of playbooks by focusing on these four key components, ensuring that all necessary aspects of an automated response are considered and effectively implemented within the platform.

NEW QUESTION # 47
On a multi-tenant Phantom server, what is the default tenant's ID?

- A. 0
- B. *
- C. Default
- D. 1

Answer: D

Explanation:
Explanation
The correct answer is C because the default tenant's ID is 1. The tenant ID is a unique identifier for each tenant on a multi-tenant Phantom server. The default tenant is the tenant that is created when Phantom is installed and contains all the existing data and assets. The default tenant's ID is always 1 and cannot be changed. Other tenants have IDs that are assigned sequentially starting from 2. See Splunk SOAR Documentation for more details.

NEW QUESTION # 48
How can a child playbook access the parent playbook's action results?

- A. By setting scope to ALL when starting the child.
- B. When configuring the playbook block in the parent, add the desired results in the Scope parameter.
- C. The parent can create an artifact with the data needed by the did.
- D. Child playbooks can access parent playbook data while the parent Is still running.

Answer: B

Explanation:
In Splunk Phantom, child playbooks can access the action results of a parent playbook through the use of the Scope parameter. When a parent playbook calls a child playbook, it can pass certain data along by setting the Scope parameter to include the desired action results. This parameter is configured within the playbook block that initiates the child playbook. By specifying the appropriate scope, the parent playbook effectively determines what data the child playbook will have access to, allowing for a more modular and organized flow of information between playbooks.

NEW QUESTION # 49
When working with complex data paths, which operator is used to access a sub-element inside another element?

- A. *(asterisk)
- B. :(colon)
- C. !(pipe)
- D. .(dot)

Answer: D

Explanation:
Explanation
The correct answer is D because the dot (.) operator is used to access a sub-element inside another element when working with complex datapaths. For example, if the datapath is container['artifacts'][0]['cef']['sourceAddress'], the dot operator is used to access the sourceAddress sub-element inside the cef element. The answer A is incorrect because the pipe (!) operator is used to chain multiple filters or functions when working with complex datapaths. For example, if the datapath is container['artifacts'][0]['cef'] ['sourceAddress']!startswith('10.'), the pipe operator is used to apply the startswith function to the sourceAddress element. The answer B is incorrect because the asterisk (*) operator is used to iterate over all the elements of an array when working with complex datapaths. For example, if the datapath is container['artifacts'][*]['cef']['sourceAddress'], the asterisk operator is used to access the sourceAddress element of all the artifacts in the container. The answer C is incorrect because the colon (:) operator is used to specify a range of elements in an array when working with complex datapaths. For example, if the datapath is container['artifacts'][0:5]['cef']['sourceAddress'], the colon operator is used to access the sourceAddress element of the first five artifacts in the container. Reference: Splunk SOAR Playbook Development Guide, page 28.
