

# Salesforce Analytics-Admn-201 Exam | New Analytics-Admn-201 Study Notes - Money Back Guaranteed of Analytics-Admn-201 Exam Materials

BTW, DOWNLOAD part of ITdumpsfree Analytics-Admn-201 dumps from Cloud Storage: <https://drive.google.com/open?id=1dsbp9MzboCIII0vftuoVD8eGg3Z3ncyS>

The Analytics-Admn-201 exam questions by experts based on the calendar year of all kinds of exam after analysis, it is concluded that conforms to the exam thesis focus in the development trend, and summarize all kind of difficulties you will face, highlight the user review must master the knowledge content. Our Salesforce Certified Tableau Server Administrator study question has high quality. So there is all effective and central practice for you to prepare for your test. With our professional ability, we can accord to the necessary testing points to edit Analytics-Admn-201 Exam Questions. It points to the exam heart to solve your difficulty.

## Salesforce Analytics-Admn-201 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> <li>• <b>Troubleshooting:</b> This section of the exam measures the skills of Support Specialists and covers resolving common Tableau Server issues. Candidates must know how to reset accounts, package logs, validate site resources, rebuild search indexes, and use analysis reports. It also includes understanding the role of browser cookies and creating support requests when needed.</li> </ul>
Topic 2	<ul style="list-style-type: none"> <li>• <b>Migration &amp; Upgrade:</b> This section of the exam measures the skills of System Engineers and covers the process of upgrading and migrating Tableau Server environments. Candidates should understand how to carry out clean reinstalls, migrate servers to new hardware, and maintain backward compatibility during the process.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>• <b>Administration:</b> This section of the exam measures the skills of Tableau Administrators and covers the day-to-day tasks of maintaining Tableau Server. Candidates should understand how to create and manage schedules, subscriptions, backups, and restores, as well as how to use tools such as TSM, Tabcmd, and REST API. It emphasizes monitoring, server analysis, log file usage, and embedding practices. It also includes managing projects, sites, and nested structures, while contrasting end-user and administrator abilities. Knowledge of publishing, web authoring, sharing views, caching, and data source certification is also tested.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>• <b>Installation and Configuration:</b> This section of the exam measures the skills of Server Engineers and covers the process of installing Tableau Server, understanding installation paths, identity store options, SSO integrations, SSL setup, and silent installs. Candidates also need to demonstrate the ability to configure Tableau Server by setting cache, distributing processes, customizing sites, and configuring user quotas. It further includes adding users, managing their roles and permissions, and applying Tableau's security model at different levels from sites to workbooks.</li> </ul>

Topic 5	<ul style="list-style-type: none"> <li>• <b>Connecting to and Preparing Data:</b> This section of the exam measures the skills of Tableau Administrators and covers the basic understanding of Tableau Server's interface, navigation, and overall topology. Candidates are expected to recognize both client and server components, understand how these interact, and know where to find information about versions, releases, and updates. It also focuses on system requirements, including hardware, operating systems, browsers, email configurations, cloud considerations, and licensing models. Additionally, it examines knowledge of server processes, data source types, network infrastructure, and ports needed for a stable deployment.</li> </ul>

## Realistic New Analytics-Admn-201 Study Notes Help You to Get Acquainted with Real Analytics-Admn-201 Exam Simulation

Our Analytics-Admn-201 study guide offers you more than 99% pass guarantee. And we believe you will pass the Analytics-Admn-201 exam just like the other customers. At the same time, if you want to continue learning, Analytics-Admn-201 guide torrent will provide you with the benefits of free updates within one year and a discount of more than one year. In the meantime, as an old customer, you will enjoy more benefits whether you purchase other subject test products or continue to update existing Analytics-Admn-201 learning test.

### Salesforce Certified Tableau Server Administrator Sample Questions (Q20-Q25):

#### NEW QUESTION # 20

Which two types of content can you include in comments on a visualization? (Choose two.)

- A. @mentions
- B. Text
- C. Images (jpg, png)
- D. Interactive snapshots of a view

**Answer: A,B**

Explanation:

Comments on Tableau Server visualizations facilitate collaboration. Let's explore what's supported:

\* Comments Feature: Enabled per site (Settings > General > Allow Comments). Users with "Add Comment" permission can post on views.

\* Option B (Text): Correct.

\* Details: The primary content type-users type free-form text in the comment box.

\* Use: Notes, questions, or feedback (e.g., "Sales spiked here-why?").

\* Option C (@mentions): Correct.

\* Details: Typing @username notifies the mentioned user via email or the UI (if notifications are enabled).

\* Use: Directs comments to specific people (e.g., "@John, check this trend").

\* Option A (Interactive snapshots of a view): Incorrect.

\* Details: Snapshots (static images) aren't supported in comments-users must take screenshots externally and can't embed them interactively.

\* Option D (Images - jpg, png): Incorrect.

\* Details: No attachment or image embedding in comments-text and mentions only. Workaround:

Link to an image hosted elsewhere.

Why This Matters: Comments enhance teamwork, but their simplicity (text + mentions) keeps the interface lightweight and focused.

Reference: Tableau Server Documentation - "Comment on a View" (<https://help.tableau.com/current/server/en-us/comment.htm>).

#### NEW QUESTION # 21

What two events must occur for Tableau Server to recompute queries for a workbook cache after a scheduled refresh? (Choose two.)

- A. The workbook was published in the last month
- **B. The workbook has upcoming scheduled refresh tasks**
- **C. The workbook has been viewed recently**
- D. The All Users group has a permission rule allowing access to the workbook

**Answer: B,C**

Explanation:

Tableau Server uses caching to speed up workbook loading by storing query results. After a scheduled extract refresh updates the data, the cache may need recomputing-let's dive into the mechanics:

\* Caching Basics:

\* VizQL Cache: Stores rendered views and query results for faster access.

\* Refresh Trigger: A scheduled refresh updates the underlying extract (.hyper), but the cache isn't automatically invalidated-it's demand-driven.

\* Recompute Conditions: Tableau recomputes the cache when the workbook is accessed (viewed) and its data has changed (e.g., via refresh).

\* Evaluation:

\* Option B (The workbook has upcoming scheduled refresh tasks): Correct.

\* Why: An upcoming refresh task indicates the workbook relies on an extract with a schedule. After the refresh runs, the data changes, priming the cache for recomputation on next view. Without a schedule, no refresh occurs, so this is a prerequisite.

\* Detail: Schedules are set in Schedules > Tasks-e.g., "Daily at 2 AM."

\* Option D (The workbook has been viewed recently): Correct.

\* Why: Viewing triggers cache recomputation if the data has changed (e.g., post-refresh).

Tableau uses a "lazy caching" model-cache updates only when a user loads the workbook, ensuring fresh results.

\* Detail: "Recently" isn't strictly defined but implies post-refresh access.

\* Option A (Published in the last month): Incorrect.

\* Why: Publish date is irrelevant-cache recomputation ties to data changes and access, not publication timing.

\* Option C (All Users group has permission rule allowing access): Incorrect.

\* Why: Permissions enable viewing, but recomputation requires actual access (viewing) and a refresh event, not just potential access.

Why This Matters: Caching balances performance and freshness-understanding triggers prevents stale data surprises.

Reference: Tableau Server Documentation - "Caching and Performance" ([https://help.tableau.com/current/server/en-us/perf\\_cache.htm](https://help.tableau.com/current/server/en-us/perf_cache.htm)).

## NEW QUESTION # 22

What should you do to ensure that server tasks associated with a particular schedule run one-at-a-time?

- A. Set Execution to Parallel
- B. Set Default priority to 0
- C. Set Frequency to Hourly
- **D. Set Execution to Serial**

**Answer: D**

Explanation:

In Tableau Server, schedules manage tasks such as extract refreshes and subscriptions. The execution mode of a schedule determines how tasks within that schedule are processed by the Background process:

\* Parallel: Tasks run simultaneously (up to the Background process's capacity), which is the default setting.

\* Serial: Tasks run one-at-a-time in sequence, ensuring that one task completes before the next begins.

To ensure tasks associated with a particular schedule run one-at-a-time, you must configure the schedule's execution mode to Serial. This is done in the Tableau Server web interface:

\* Go to Schedules.

\* Select the schedule, click Actions > Edit Schedule.

\* Under Execution, choose Serial instead of Parallel.

\* Option A (Set Execution to Serial): Correct. This directly addresses the requirement by forcing tasks to execute sequentially.

\* Option B (Set Default priority to 0): Incorrect. Priority (1-100) determines the order of task execution across all schedules, not whether tasks run one-at-a-time within a single schedule. Also, 0 is not a valid priority value (minimum is 1).

\* Option C (Set Frequency to Hourly): Incorrect. Frequency (e.g., hourly, daily) controls when the schedule runs, not how tasks within it are executed.

\* Option D (Set Execution to Parallel): Incorrect. Parallel execution allows tasks to run simultaneously, which contradicts the requirement.

Reference: Tableau Server Documentation - "Create or Modify a Schedule" ([https://help.tableau.com/current/server/en-us/schedule\\_manage\\_create.htm](https://help.tableau.com/current/server/en-us/schedule_manage_create.htm)).

### NEW QUESTION # 23

What are two features of the Tableau Server user-based license? (Choose two.)

- A. A perpetual license
- **B. Enables distinct user roles**
- C. Restricts the number of machine cores you can deploy
- **D. A subscription license**

**Answer: B,D**

Explanation:

Tableau Server's user-based licensing model assigns licenses to individual users (Creator, Explorer, Viewer) rather than machines or cores. Key features include:

- \* Subscription license: Licenses are typically subscription-based, renewed annually or monthly, aligning with Tableau's pricing model.
- \* Distinct user roles: It supports three roles (Creator, Explorer, Viewer), each with specific capabilities, enabling granular access control.
- \* Option A (A subscription license): Correct. User-based licenses are subscription-based by default.
- \* Option B (Enables distinct user roles): Correct. The model defines Creator, Explorer, and Viewer roles.
- \* Option C (Restricts the number of machine cores): Incorrect. This applies to core-based licensing, not user-based.
- \* Option D (A perpetual license): Incorrect. Perpetual licenses were phased out; user-based licenses are subscription-based as of recent models.

Reference: Tableau Server Documentation - "Licensing Overview" ([https://help.tableau.com/current/server/en-us/license\\_usage.htm](https://help.tableau.com/current/server/en-us/license_usage.htm)).

### NEW QUESTION # 24

When you use trusted tickets in Tableau Server, users can:

- A. Save and edit workbooks
- B. Embed database credentials
- C. Encrypt database connections
- **D. Access embedded views without being prompted for credentials**

**Answer: D**

Explanation:

Trusted Tickets is an authentication method in Tableau Server for embedding views in external applications (e.g., portals) without requiring users to log in manually. Here's how it works:

- \* A trusted application (e.g., a web server) authenticates with Tableau Server using a trusted IP or username/password.
- \* Tableau Server issues a temporary ticket (a unique string).
- \* The ticket is embedded in a view URL (e.g., `/trusted/<ticket>/views/...`), granting access to the view for a short period (configurable, default 5 minutes).
- \* Option A (Access embedded views without being prompted for credentials): Correct. Trusted tickets enable SSO-like behavior for embedded content, bypassing the login prompt if the ticket is valid. This is ideal for seamless integration into external systems.
- \* Option B (Encrypt database connections): Incorrect. Encryption is handled by data source configurations (e.g., SSL), not trusted tickets, which focus on user authentication.
- \* Option C (Save and edit workbooks): Incorrect. Trusted tickets grant view access, not edit permissions—those depend on the user's site role and permissions.
- \* Option D (Embed database credentials): Incorrect. Trusted tickets authenticate users to Tableau Server, not databases—database credentials are managed separately in the data source.

Why This Matters: Trusted tickets simplify embedding Tableau content securely in custom applications, enhancing user experience.

Reference: Tableau Server Documentation - "Trusted Authentication" ([https://help.tableau.com/current/server/en-us/trusted\\_auth.htm](https://help.tableau.com/current/server/en-us/trusted_auth.htm)).

### NEW QUESTION # 25

.....

As the world's well-known training website, ITdumpsfree Salesforce Analytics-Admn-201 test questions and test answers are fit to all of the world. You will refer to free demo and pdf. Questions and answers is also the realest. Our ITdumpsfree is the springboard which can help IT people to improve their power. The passing rate of ITdumpsfree Salesforce Analytics-Admn-201 braindump is 100%. Therefore, many people choose it to get Salesforce Analytics-Admn-201 certification.
