2026 VCESoft最新的1Z0-1151-25 PDF版考試題庫和1Z0-1151-25考試問題和答案免費分享: <https://drive.google.com/open?id=13FOZBQNBQBA8xXwDMNXXGaQwDELrZFt>

我們VCESoft不僅僅提供優質的產品給每位1Z0-1151-25考生，而且提供完善的售後服務給每位考生，如果你使用了我們的產品，我們將讓你享受一年免費的更新，並且在第一時間回饋給每位考生，讓你及時得到更新的最新的考試資料，以最大效益的服務給每位1Z0-1151-25考生。

Oracle 1Z0-1151-25 考試大綱:

主題	簡介
主題 1	<ul style="list-style-type: none">Implement Oracle Database@Google Cloud: This section measures the proficiency of Cloud Database Engineers in utilizing Oracle Database@Google Cloud. It explores the architecture and operational framework for running Oracle databases on Google Cloud. Candidates will learn about onboarding procedures, provisioning resources, and managing database services effectively to optimize performance and availability in a Google Cloud-integrated multi-cloud ecosystem.

主題 2	<ul style="list-style-type: none"> • Implement Oracle Database@Azure: This section tests the expertise of Database Solutions Architects in deploying and managing Oracle Database@Azure. It covers the architectural components and onboarding processes required for provisioning databases in Azure while maintaining Oracle's advanced database capabilities. Candidates will also focus on configuring high availability and disaster recovery strategies to ensure business continuity and data resilience in a multi-cloud setup.
主題 3	<ul style="list-style-type: none"> • Configure Multicloud Connection Options: This section assesses the abilities of Network Engineers in configuring connectivity solutions for OCI multi-cloud environments. It includes setting up secure networking options such as Site-to-Site VPN and FastConnect for seamless cloud integration. Candidates will also learn how to implement Oracle Interconnect services for establishing direct, high-performance connections between OCI and third-party cloud providers like Microsoft Azure and Google Cloud.
主題 4	<ul style="list-style-type: none"> • Core OCI Services Overview: This section evaluates the knowledge of Identity and Database Administrators in managing OCI's core services for multi-cloud integration. It covers the implementation of identity federation between OCI Identity Domains and external identity providers, ensuring secure authentication across multiple cloud environments. Candidates will also gain expertise in configuring Virtual Cloud Network (VCN) components and administering OCI database services, including Base Databases, Autonomous Databases, and HeatWave, to support scalable multi-cloud deployments.
主題 5	<ul style="list-style-type: none"> • Introduction to Multicloud: This section of the exam measures the skills of Cloud Architects in understanding multicloud environments and their benefits. It covers the reasons organizations adopt multi-cloud strategies, including flexibility, cost optimization, and risk management. Candidates will learn about common multicloud use cases and how they are implemented in Oracle Cloud Infrastructure (OCI) to enhance interoperability and performance.

Oracle 1Z0-1151-25證照 - 1Z0-1151-25考試備考經驗

總體來說，VCEsoft 的模擬試題還是比較實用的，知識點也比較明確，據廣大考生反應，真正的 1Z0-1151-25 考題都是我們考題網裡面的原題，而且題目的答案也比較隱晦一些，不懂不明白那個知識。或沒有認真看題目，是不可能選到正確答案的，如果你通過我們的 Oracle 1Z0-1151-25 考題模擬，就能在 1Z0-1151-25 考試中輕鬆過關，讓自己更加接近成功之路。

最新的 Oracle Cloud Infrastructure 1Z0-1151-25 免費考試真題 (Q46-Q51):

問題 #46

What does Oracle Base Database Service utilize in Oracle Cloud Infrastructure to ensure high availability and disaster recovery?

- A. Geography
- **B. Availability domains and fault domains**
- C. Availability set
- D. Availability zone

答案: B

解題說明:

Availability Domains (ADs): These are independent data centers within an OCI region. Each region has multiple ADs. Placing database instances in different ADs protects against failures of an entire data center.

Fault Domains (FDs): Within each AD, there are fault domains. These are groupings of hardware and infrastructure designed to minimize the impact of hardware failures. Placing database instances in different FDs within the same AD protects against failures of physical hardware like power supplies or network switches.

By utilizing both Availability Domains and Fault Domains, Oracle Base Database Service ensures high availability by providing redundancy at multiple levels:

High Availability: Distributing instances across different FDs within an AD protects against local hardware failures.

Disaster Recovery: Distributing instances across different ADs protects against larger-scale events that might affect an entire data center.

Here's why the other options are not the primary mechanism:

Geography: While OCI regions are geographically separated, "geography" itself isn't a specific feature used for high availability within a region. Regions are used for broader disaster recovery strategies (e.g., replicating data to a different region).

Availability set: This is a concept used in other cloud providers (like Azure) but not in OCI.

Availability zone: This is a term used in other cloud providers (like AWS) and is conceptually similar to Availability Domains in OCI.

問題 #47

Regarding the benefits of multicloud, which of the following statements is NOT accurate?

- A. Multicloud enables businesses to avoid vendor lock-in, providing greater flexibility in choosing services.
- **B. A major advantage of Multicloud is to simplify the management of the different services into a single pane of glass.**
- C. Multicloud allows organizations to utilize specialized, best-of-breed services available from different vendors.
- D. By distributing workloads across multiple providers, multicloud improves overall resilience and reduces the impact of localized failures.

答案: B

解題說明:

In reality, managing a multicloud environment is often more complex than managing a single-cloud environment. Each cloud provider has its own management tools, APIs, and interfaces. Integrating these into a true "single pane of glass" is a significant challenge, although there are emerging tools and platforms attempting to address this. It's not a simplification; it's an added layer of complexity. The other statements are accurate:

a) Multicloud enables businesses to avoid vendor lock-in, providing greater flexibility in choosing services: This is a key driver for multicloud adoption.

b) Multicloud allows organizations to utilize specialized, best-of-breed services available from different vendors: Different cloud providers excel in different areas, and multicloud allows organizations to take advantage of these specializations.

d) By distributing workloads across multiple providers, multicloud improves overall resilience and reduces the impact of localized failures: This is a core benefit of multicloud for disaster recovery and business continuity.

問題 #48

What is the purpose of federating the Azure tenant's Microsoft Entra ID with an OCI identity domain?

- A. To specify an Azure Virtual Network (VNet) in Azure during provisioning
- B. To enable bi-directional communication between Azure and OCI
- C. To specify an Azure Virtual Network (VNet) in Azure during provisioning
- **D. To allow Azure users to log in to the OCI Console using the same Azure credentials used for Azure**

答案: D

問題 #49

In the Oracle Database@Azure service, how are resources provisioned?

- **A. Oracle Exadata Infrastructure and VM Cluster are provisioned exclusively in the Azure portal.**
- B. Oracle Exadata Infrastructure and VM Cluster are set up in the OCI console, while Oracle container and pluggable databases are managed in the Azure portal.
- C. Both Oracle Exadata Infrastructure and VM Cluster, as well as Oracle container and pluggable databases, are provisioned through the Azure portal.
- D. Oracle Exadata VM Cluster and container databases are provisioned via the OCI console.

答案: A

解題說明:

Oracle Database@Azure is a service where Exadata infrastructure is deployed within Azure datacenters. Therefore, the provisioning of the underlying infrastructure-the Exadata machines, networking, and virtual machine cluster-is managed through the Azure portal. Here's a breakdown:

Exadata Infrastructure and VM Cluster: These are the foundational components of the service. Because the hardware and virtualization reside within Azure's environment, their provisioning and management are handled through the Azure portal. This includes setting up the compute nodes, storage servers, network configuration, and the virtual machine cluster that runs the Oracle

software.

Why the other options are incorrect:

- Both Oracle Exadata Infrastructure and VM Cluster, as well as Oracle container and pluggable databases, are provisioned through the Azure portal: While the infrastructure is managed in Azure, the actual database instances (Container Databases and Pluggable Databases) are managed using Oracle tools and potentially through the OCI console for some specific tasks, not directly through the Azure portal.
- Oracle Exadata Infrastructure and VM Cluster are set up in the OCI console, while Oracle container and pluggable databases are managed in the Azure portal: This is incorrect. Since the Exadata hardware resides in Azure, the OCI console is not involved in the infrastructure provisioning.
- Oracle Exadata VM Cluster and container databases are provisioned via the OCI console: This is also incorrect. The VM cluster resides within Azure, so the OCI console is not used for its provisioning.

問題 #50

What is the key difference between the purchase workflows for the private and public offers of Oracle Database@Google Cloud?

- A. The public offer is billed through Oracle, while the private offer is billed through Google Cloud.
- B. The private offer involves negotiating a contract with an Oracle sales representative, while the public offer does not.**
- C. The public offer allows for the use of existing OCI accounts, while the private offer does not.
- D. The private offer requires approval from Google Cloud, while the public offer does not.

答案: B

解題說明:

The key difference is that private offers for Oracle Database@Google Cloud require negotiation with an Oracle sales representative to create a tailored contract in the Google Cloud Marketplace, whereas public offers are standardized and directly available without negotiation. Option D is incorrect; both are billed through Google Cloud. Options A and B misrepresent the workflows. Oracle's purchasing documentation outlines this sales-driven process for private offers.

問題 #51

.....

在談到1Z0-1151-25考試認證，很難忽視的是可靠性，VCESoft的1Z0-1151-25考試培訓資料是特別設計，以最大限度的提高你的工作效率，本站在全球範圍內執行這項考試通過率最大化。
