

Latest updated CAS-005 Dumps Free Download | Amazing Pass Rate For CAS-005 Exam | Top CAS-005: CompTIA SecurityX Certification Exam

P.S. Free & New CAS-005 dumps are available on Google Drive shared by Real4test: <https://drive.google.com/open?id=1YnT9Y4zaY1W6vgqHHZdlsMlEtLLCRkq8>

Taking CAS-005 practice exams is also important because it helps you overcome your mistakes before the final attempt. When we talk about the CAS-005 certification exam, the CompTIA CAS-005 practice test holds more scoring power because it is all about how you can improve your CompTIA SecurityX Certification Exam (CAS-005) exam preparation. Real4test offers desktop practice exam software and web-based CAS-005 Practice Tests. These CAS-005 practice exams help you know and remove mistakes. This is the reason why the experts suggest taking the CAS-005 practice test with all your concentration and effort.

CompTIA CAS-005 Exam Syllabus Topics:

Topic	Details
Topic 1	Security Engineering: This section measures the skills of CompTIA security architects that involve troubleshooting common issues related to identity and access management (IAM) components within an enterprise environment. Candidates will analyze requirements to enhance endpoint and server security while implementing hardware security technologies. This domain also emphasizes the importance of advanced cryptographic concepts in securing systems.
Topic 2	Security Architecture: This domain focuses on analyzing requirements to design resilient systems, including the configuration of firewalls and intrusion detection systems.
Topic 3	Governance, Risk, and Compliance: This section of the exam measures the skills of CompTIA security architects that cover the implementation of governance components based on organizational security requirements, including developing policies, procedures, and standards. Candidates will learn about managing security programs, including awareness training on phishing and social engineering.
Topic 4	Security Operations: This domain is designed for CompTIA security architects and covers analyzing data to support monitoring and response activities, as well as assessing vulnerabilities and recommending solutions to reduce attack surfaces. Candidates will apply threat-hunting techniques and utilize threat intelligence concepts to enhance operational security.

CompTIA SecurityX Certification Exam Sample Questions (Q83-Q88):

A security architect wants to develop a baseline of security configurations. These configurations automatically will be utilized machine is created. Which of the following technologies should the security architect deploy to accomplish this goal?

Which of the following solutions, if implemented, would mitigate the risk of this issue reoccurring?

- A. Disabling DNS zone transfers
- B. Implementing DNS masking on internal servers
- C. Permitting only clients from internal networks to query DNS
- D. Restricting DNS traffic to UDP'W

Answer: A

Explanation:

The log snippet indicates a DNS AXFR (zone transfer) request, which can be exploited by attackers to gather detailed information about an internal network's infrastructure. Disabling DNS zone transfers is the best solution to mitigate this risk. Zone transfers should generally be restricted to authorized secondary DNS servers and not be publicly accessible, as they can reveal sensitive network information that facilitates lateral movement during an attack.

References:

* CompTIA SecurityX Study Guide: Discusses the importance of securing DNS configurations, including restricting zone transfers.

* NIST Special Publication 800-81, "Secure Domain Name System (DNS) Deployment Guide":

Recommends restricting or disabling DNS zone transfers to prevent information leakage.

NEW QUESTION # 86

A security analyst reviews the following report:

	Location	Chassis manufacturer	OS	Application developer	Vendor
Product A	United States	Local company A	Debian 11	Unknown	Charlie Security Consulting
Product B	United States	Global company B	Red Hat Enterprise Linux	Developer B	BigBox Vulnerabilities

Which of the following assessments is the analyst performing?

- A. Quantitative
- B. Supply chain
- C. System
- D. Organizational

Answer: B

Explanation:

The table shows detailed information about products, including location, chassis manufacturer, OS, application developer, and vendor. This type of information is typically assessed in a supply chain assessment to evaluate the security and reliability of components and services from different suppliers.

Why Supply Chain Assessment?

* Component Evaluation: Assessing the origin and security of each component used in the products, including hardware, software, and third-party services.

* Vendor Reliability: Evaluating the security practices and reliability of vendors involved in providing components or services.

* Risk Management: Identifying potential risks associated with the supply chain, such as vulnerabilities in third-party components or insecure development practices.

Other types of assessments do not align with the detailed supplier and component information provided:

* A. System: Focuses on individual system security, not the broader supply chain.

* C. Quantitative: Focuses on numerical risk assessments, not supplier information.

* D. Organizational: Focuses on internal organizational practices, not external suppliers.

References:

* CompTIA SecurityX Study Guide

* NIST Special Publication 800-161, "Supply Chain Risk Management Practices for Federal Information Systems and Organizations"

* "Supply Chain Security Best Practices," Gartner Research

NEW QUESTION # 87

A company wants to use IoT devices to manage and monitor thermostats at all facilities. The thermostats must receive vendor security updates and limit access to other devices within the organization. Which of the following best addresses the company's requirements?

- A. Configuring IoT devices to always allow automatic updates

- B. Only allowing operation for IoT devices during a specified time window
- **C. Operating IoT devices on a separate network with no access to other devices internally**
- D. Only allowing Internet access to a set of specific domains

Answer: C

Explanation:

The best approach for managing and monitoring IoT devices, such as thermostats, is to operate them on a separate network with no access to other internal devices. This segmentation ensures that the IoT devices are isolated from the main network, reducing the risk of potential security breaches affecting other critical systems. Additionally, this setup allows for secure vendor updates without exposing the broader network to potential vulnerabilities inherent in IoT devices.

NEW QUESTION # 88
