- A. Mule message attributes
- **B. Mule event**
- C. Mule message
- D. Mule message payload

**NEW QUESTION # 177**

A shopping API contains a method to look up store details by department To get information for a particular store, web clients will submit requests with a query parameter named department and a URI parameter named storeId.

What is a valid RAML snippet that supports requests from web clients to get data for a specific storeId and department name?

- A. 

```
/(storeId):
  get:
    queryParameters:
      department:
```
- B. 

```
get:
  queryParameters:
    {storeId}:
  queryParameters:
    department:
```
- C. 

```
/department:
  get:
    uriParameter:
      storeId:
```
- D. 

```
get:
  queryParameters:
    department:
  uriParameters:
    storeId:
```

**Answer: A**

Explanation:

Lets revise few concepts RAML which can help us to find the answer of this question.

## URI Parameters

Lets have a look at below example.

```
/foos:
```

```
/{id}:
```

```
/name/{name}:
```

Here, the braces { } around property names define URI parameters. They represent placeholders in each URI and do not reference root-level RAML file properties as we saw above in the baseUri declaration. The added lines represent the resources /foos/{id} and /foos/name/{name}.

## Query Parameters

Now we'll define a way to query the foos collection using query parameters. Note that query parameters are defined using the same syntax that we used above for data types:

```
/foos:
```

```
get:
```

```
description: List all Foos matching query criteria, if provided;
```

```
otherwise list all Foos
```

```
queryParameters:
```

```
name?: string
```

```
ownerName?: string
```

Based on the above information , below is the only option which defines storeid as uri parameter and department as query parameter.

```
/{storeId}:
```

```
get:
```

```
queryParameter:
```

```
department:
```

## NEW QUESTION # 178

What is the trait name you would use for specifying client credentials in RAML?

- A. client-id-required
- B. client-id
- C. headers
- D. cannot be specified in RAML

**Answer: A**

Explanation:

client-id-required enforces clients to add client\_id and client\_secret.

Please refer to below steps.

Add a section called traits: at the root level to define query parameters:

```
traits:
```

```
- client-id-required:
```

```
queryParameters:
```

```
client_id:
```

```
type: string
```

```
client_secret:
```

```
type: string
```

2) Reference the trait in each of the methods to specify that each of the methods require these query parameters. After each method in the RAML file, add is: [client-id-required]. For example:

```
/users:
```

```
get:
```

```
is: [client-id-required]
```

```
description: Gets a list of JSONPlaceholder users.
```
