CompTIA A+ Certification Exam: Core 2 Sample Questions (Q373-Q378):

NEW QUESTION # 373

A technician wants to install Developer Mode on a Windows laptop but is receiving a "failed to install package" message. Which of the following should the technician do first?

- A. Enable SSH.
- B. Reboot computer.
- C. Ensure internet connectivity.
- D. Check for Windows updates.

Answer: D

Explanation:

Developer Mode on Windows 10 is a feature that allows developers to test and debug their applications on their devices, as well as sideload apps and access other developer tools¹². To enable Developer Mode, the user needs to go to the Settings app, select Update & Security, choose For Developers, and switch to Developer Mode¹²³. However, enabling Developer Mode requires internet connectivity, as Windows will download and install a package of features, such as Windows Device Portal and SSH services, that are necessary for Developer Mode¹²⁴. If the user does not have internet connectivity, they will receive a "failed to install package" message when trying to enable Developer Mode¹²⁴. Therefore, the first thing that the technician should do is to ensure that the laptop has internet access, either through Wi-Fi or Ethernet, and then try to enable Developer Mode again¹²⁴

NEW QUESTION # 374

You have been contacted through the help desk chat application. A user is setting up a replacement SOHO router. Assist the user with setting up the router.

INSTRUCTIONS

Select the most appropriate statement for each response. Click the send button after each response to continue the chat. If at any time you would like to bring back the initial state of the simulation, please click the Reset All button.

Answer:

Explanation:

The screenshot shows a chat interface with a customer message and a support response. The customer message is: "I just received a new router for the office, and I need help setting it up." The support response is: "I am happy to assist you today." The customer then asks: "I need to set up my basic security settings." The support agent asks: "Is this the first router in your office?" The customer replies: "No, it is a replacement. The last router broke. I am currently logged in and connected to the router's web page." The support agent provides instructions: "The first thing you need to do is change the default password." A large watermark for "CompTIA" is overlaid across the bottom of the chat window.

To: Customer

 I just received a new router for the office, and I need help setting it up.

 I am happy to assist you today.

 I need to set up my basic security settings.

 Is this the first router in your office?

 No, it is a replacement. The last router broke.
I am currently logged in and connected to the router's web page.

 The first thing you need to do is change the default password.

 Create a new password with an uppercase, a lowercase, and a special character.

That is complete now, and the router is asking to reboot. Should I reboot to move on?

Yes, reboot please.

What is next?

Do you know the name of the network you connected to before?

Yes.

Change the SSID to the previously used network name.

Also, make sure to change your wireless password to the one previously used.

That is done. Thank you for your help.

You are welcome. Is there anything else I can help you with?

No, I am all set.

NEW QUESTION # 375

A technician needs to configure laptops so that only administrators can enable virtualization technology if needed. Which of the following should the technician configure?

- A. BIOS password
- B. Screen lock
- C. AutoRun setting
- D. Guest account

Answer: A

NEW QUESTION # 376

A company recently outsourced its night-shift cleaning service. A technician is concerned about having unsupervised contractors in the building. Which of the following security measures can be used to prevent the computers from being accessed? (Select two).

* Implementing data-at-rest encryption

- A. Restricting log-in times
- B. Disabling local administrator accounts
- C. Restricting user permissions
- D. Enabling a screen lock
- E. Disabling AutoRun

Answer: B,C

Explanation:

The correct answers are D. Restricting log-in times and E. Enabling a screen lock. These are the security measures that can be used to prevent the computers from being accessed by unsupervised contractors in the building.

* Restricting log-in times means setting a policy that allows users to log in only during certain hours, such as the regular working hours of the company. This will prevent unauthorized access by contractors who work at night1.

* Enabling a screen lock means setting a policy that requires users to enter a password or a PIN to unlock their screens after a period of inactivity. This will prevent unauthorized access by contractors who might try to use the computers when the users are

away2.

NEW QUESTION # 377

A macOS user needs to create another virtual desktop space. Which of the following applications will allow the user to accomplish this task?

- A. Dock
- B. Spotlight
- **C. Mission Control**
- D. Launchpad

Answer: C

Explanation:

Explanation

application that will allow a macOS user to create another virtual desktop space is Mission Control. Mission Control lets you create additional desktops, called spaces, to organize the windows of your apps. You can create a space by entering Mission Control and clicking the Add button in the Spaces bar1. You can also assign apps to specific spaces and move between them easily1.
