Axis Network Video Exam Sample Questions (Q104-Q109):

NEW QUESTION # 104

Firmware upgrades are efficiently installed using

- A. **AXIS Device Manager**
- B. AXIS IP Utility
- C. AXIS Streaming Assistant
- D. AXIS Site Designer

Answer: A

Explanation:

Firmware upgrades are efficiently installed using AXIS Device Manager. This tool allows for centralized management of Axis devices, enabling easy firmware updates, configuration changes, and maintenance tasks across multiple devices simultaneously. Axis Device Manager streamlines the process, ensuring that devices remain up-to-date with the latest features and security improvements. Detailed instructions for using AXIS Device Manager are available in Axis' support documentation and user manuals.

NEW QUESTION # 105

As this person enters the scene, what is true about P-frames?

- A. They become more frequent
- B. **They increase in size**
- C. They decrease in size
- D. They become less frequent

Answer: B

Explanation:

As a person enters the scene, P-frames (Predictive frames) increase in size. P-frames contain only the changes in the image from the previous frame (I-frame or another P-frame). When there is movement or new objects enter the scene, more data is needed to describe the changes, resulting in larger P-frames. NEW QUESTION # 106

The reason why the camera is not blinded by the headlights is that

- A. an IR-pass filter is in use.
- B. the gain is set to a high value.
- C. the exposure time is extremely long.
- D. the IR light is the stronger source.

Answer: A

Explanation:

The reason why the camera is not blinded by the headlights is that an IR-pass filter is in use. This filter blocks out visible light, including the bright headlights, and allows only infrared light to pass through. This is particularly useful in nighttime surveillance scenarios where the camera can rely on infrared illumination instead of visible light, ensuring clear visibility even in the presence of bright lights like headlights.

NEW QUESTION # 107

Which of the following statements about multicast video streaming are true? (Choose three)

- A. RTSP streams are always sent through multicast
- B. Multicast uses TCP as transport protocol
- C. Multicast can help to save bandwidth in a network
- D. Multicast can typically not be used to provide video over internet
- E. Multicast extends the viewer capacity of a camera or an encoder from 10-20 to an unlimited number

Answer: C,D,E

Explanation:

Multicast video streaming has several important characteristics:

* A. Multicast can help to save bandwidth in a network because it allows the same video stream to be delivered to multiple users simultaneously, reducing the need for multiple unicast streams.

* B. Multicast can typically not be used to provide video over the internet because many routers and firewalls do not support multicast traffic across the internet, which is more suited for local network environments.

* D. Multicast extends the viewer capacity of a camera or an encoder from 10-20 to an unlimited number, as it does not rely on multiple individual connections to distribute the video stream.

NEW QUESTION # 108

Which features can an outdoor ready camera have to accommodate for changes in weather?

- A. Artic temperature control and IR-cut filter
- B. A cooling fan and a heater element
- C. A heater element and I/O ports
- D. A cooling fan and an IK rating

Answer: B

Explanation:

Outdoor-ready cameras from Axis can be equipped with a cooling fan and a heater element to handle varying weather conditions. The cooling fan helps manage high temperatures by preventing overheating, while the heater element ensures the camera operates effectively in cold environments by preventing frost and condensation. These features allow the camera to maintain optimal

performance and reliability regardless of the weather, as specified in Axis' product datasheets and technical specifications for outdoor models.
