## 220-1202 Exam Sample Questions - Test 220-1202 Valid

Immediately after you have made a purchase for our 220-1202 practice dumps, you can download our 220-1202 study materials to

make preparations. It is universally acknowledged that time is a key factor in terms of the success. The more time you spend in the preparation for 220-1202 Training Materials, the higher possibility you will pass the exam. And with our 220-1202 study torrent, you can get preparations and get success as early as possible.

## CompTIA A+ Certification Exam: Core 2 Sample Questions (Q136-Q141):

### NEW QUESTION # 136

A user is working from home and is unable to access work files on a company laptop. Which of the following should a technician configure to fix the network access issue?

- A. Wide-area network
- B. Proxy network settings
- C. Virtual private network
- D. Wireless network

**Answer: C**

Explanation:

A VPN creates a secure tunnel from the user's home network into the corporate network, providing the necessary routing and access controls for the laptop to reach internal file servers. Without a VPN, the device remains outside the corporate LAN and cannot directly reach protected resources.

A VPN creates a secure tunnel from the user's home network into the corporate network, providing the necessary routing and access controls for the laptop to reach internal file servers. Without a VPN, the device remains outside the corporate LAN and cannot directly reach protected resources.

### NEW QUESTION # 137

A technician uses AI to draft a proposal about the benefits of new software. When reading the draft, the technician notices that the draft contains factually incorrect information. Which of the following best describes this scenario?

- A. Hallucinations
- B. Appropriate use
- C. Plagiarism
- D. Data privacy

**Answer: A**

Explanation:

When an AI model generates plausible-sounding but factually inaccurate or fabricated information, it's referred to as a "hallucination." Identifying and correcting these errors is essential to ensure the accuracy and reliability of AI-assisted content.

### NEW QUESTION # 138

The screen of a previously working computer repeatedly displays an OS Not Found error message when the computer is started. Only a USB drive, a keyboard, and a mouse are plugged into the computer. Which of the following should a technician do first?

- A. Run data recovery tools on the disk.
- B. Partition the disk using the GPT format.
- C. Check boot options.
- D. Switch from UEFI to BIOS.

**Answer: C**

Explanation:

An "OS Not Found" error most commonly indicates the system isn't booting from the correct device. Verifying and correcting the boot order (ensuring the internal hard drive is prioritized over USB or other entries) is the quickest first step before making any changes to the disk or firmware settings.

### NEW QUESTION # 139

A user reports getting a BSOD error on their computer at least twice a day. Which of the following should the technician use to determine the cause?

- A. Device Manager
- B. Performance Monitor
- C. System Information
- D. Event Viewer

**Answer: D**

Explanation:

Event Viewer logs system errors, including the critical events that lead up to and include Blue Screen of Death (BSOD) incidents. By reviewing the "System" and "Application" logs, especially the error entries and any bugcheck codes, you can identify the faulting driver, service, or hardware component responsible for the crashes.

#### **NEW QUESTION # 140**

A technician is setting up a surveillance system for a customer. The customer wants access to the system's web interface on the LAN via the system's IP address. Which of the following should the technician use to prevent external log-in attempts from the internet?

- A. Static IP
- B. Content filtering
- C. Subnetting
- D. Port mapping

**Answer: D**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

To prevent external access, the technician should avoid exposing the surveillance system's port to the public internet. Port mapping (also known as port forwarding) is the method used to control which internal devices and ports are accessible from the outside. By not configuring port forwarding for the device, external login attempts are effectively blocked.

B: Subnetting organizes IP addresses but doesn't directly restrict access.

C: A static IP ensures consistent addressing but does not secure access.

D: Content filtering is used to restrict web content, not to block access to a web interface.
