Reliable Study 350-201 Questions - Valid 350-201 Exam Syllabus

As long as you are willing to exercise on a regular basis, the 350-201 exam will be a piece of cake, because what our 350-201 practice materials include is quintessential points about the exam. And our high pass rate as 98% to 100% are all proved data form our customers who had attended the 350-201 Exam and got their success with the help of our 350-201 study dumps. So just come on and join our success!

Passing the Cisco 350-201 Exam is a requirement for obtaining the Cisco Certified CyberOps Professional certification. Performing CyberOps Using Cisco Security Technologies certification is recognized globally and is highly valued by employers in the cybersecurity industry. It demonstrates that the holder has the knowledge and skills necessary to protect organizations from cyber threats using Cisco security technologies.

Cisco Performing CyberOps Using Cisco Security Technologies Sample Questions (Q100-Q105):

NEW QUESTION # 100
Refer to the exhibit.
What is the connection status of the ICMP event?

- A. blocked by an intrusion policy rule
- B. allowed in the default action
- C. blocked by a configured access policy rule
- D. allowed by a configured access policy rule

Answer: D

NEW QUESTION # 101
An engineer is going through vulnerability triage with company management because of a recent malware outbreak from which 21 affected assets need to be patched or remediated. Management decides not to prioritize fixing the assets and accepts the vulnerabilities. What is the next step the engineer should take?

- A. Investigate the vulnerability to prevent further spread
- B. Isolate the assets affected in a separate network
- C. Apply vendor patches or available hot fixes
- D. Acknowledge the vulnerabilities and document the risk

Answer: B

NEW QUESTION # 102
An organization suffered a security breach in which the attacker exploited a Netlogon Remote Protocol vulnerability for further privilege escalation. Which two actions should the incident response team take to prevent this type of attack from reoccurring? (Choose two.)

- A. Implement a patch management process.
- B. Apply existing patches to the company servers.
- C. Define roles and responsibilities in the incident response playbook.
- D. Scan the company server files for known viruses.
- E. Automate antivirus scans of the company servers.

Answer: A,B

Explanation:
To prevent a security breach exploiting the Netlogon Remote Protocol vulnerability from reoccurring, the incident response team should implement a patch management process and apply existing patches to the company servers5. Patch management ensures that all systems are up-to-date with the latest security patches, which can prevent known vulnerabilities from being exploited6. Applying existing patches is a critical step in securing systems against identified threats, such as the Netlogon Remote Protocol vulnerability5.

NEW QUESTION # 103
Refer to the exhibit.

Which indicator of compromise is represented by this STIX?

- A. cross-site scripting vulnerability to backdoor server
- B. website redirecting traffic to ransomware server
- C. web server vulnerability exploited by malware
- D. website hosting malware to download files

Answer: D

Explanation:
The STIX (Structured Threat Information eXpression) object in the exhibit indicates that the compromise involves a website hosting malware, which is designed to download files onto a user's system without their knowledge. This type of indicator is commonly associated with drive-by download attacks, where visiting a website can result in the automatic download and execution of malware. The STIX object would contain information about the malicious URLs, file hashes, and other relevant indicators that can be used to detect and prevent such threats.

NEW QUESTION # 104
A patient views information that is not theirs when they sign in to the hospital's online portal. The patient calls the support center at the hospital but continues to be put on hold because other patients are experiencing the same issue. An incident has been declared, and an engineer is now on the incident bridge as the CyberOps Tier 3 Analyst. There is a concern about the disclosure of PII occurring in real-time. What is the first step the analyst should take to address this incident?

- A. Review system and application logs to identify errors in the portal code
- B. Contact the third-party handling provider to respond to the incident as critical
- C. Turn off all access to the patient portal to secure patient records

- D. Evaluate visibility tools to determine if external access resulted in tampering

Answer: C

NEW QUESTION # 105
