

## New DP-600 Test Registration, Test DP-600 Centres

A certification is not only an affirmation to your ability but also can help you enter a better company and improve your salary. DP-600 exam cram can help you get your certification successfully. We have a professional team to collect and research the latest information for the exam, and we offer you free update for 365 days after payment, so that you can obtain the latest information. In order to build up your confidence for DP-600 Exam Braindumps, we are pass guarantee and money back guarantee if you fail to pass the exam.

## Microsoft Implementing Analytics Solutions Using Microsoft Fabric Sample Questions (Q58-Q63):

### NEW QUESTION # 58

You have a data warehouse that contains a table named Stage. Customers. Stage-Customers contains all the customer record updates from a customer relationship management (CRM) system. There can be multiple updates per customer. You need to write a T-SQL query that will return the customer ID, name, postal code, and the last updated time of the most recent row for each customer ID.

How should you complete the code? To answer, select the appropriate options in the answer area, NOTE Each correct selection is worth one point.

#### Answer:

Explanation:

Explanation:

In the ROW\_NUMBER() function, choose OVER (PARTITION BY CustomerID ORDER BY LastUpdated DESC).

In the WHERE clause, choose WHERE X = 1.

To select the most recent row for each customer ID, you use the ROW\_NUMBER() window function partitioned by CustomerID and ordered by LastUpdated in descending order. This will assign a row number of 1 to the most recent update for each customer. By selecting rows where the row number (X) is 1, you get the latest update per customer.

References =

Use the OVER clause to aggregate data per partition

Use window functions

### NEW QUESTION # 59

You have a Fabric workspace named Workspace 1 that contains a dataflow named Dataflow1. Dataflow1 has a query that returns 2,000 rows. You view the query in Power Query as shown in the following exhibit.

What can you identify about the pickupLongitude column?

- A. The column has duplicate values.
- B. All the table rows are profiled.
- C. The column has missing values.
- D. There are 935 values that occur only once.

#### Answer: A

Explanation:

The pickupLongitude column has duplicate values. This can be inferred because the 'Distinct count' is 935 while the 'Count' is 1000, indicating that there are repeated values within the column. References = Microsoft Power BI documentation on data profiling could provide further insights into understanding and interpreting column statistics like these.

### NEW QUESTION # 60

You have a Fabric tenant named Tenant1 that contains a lakehouse named Lakehouse1.

You need to add data to Lakehouse1 from a CSV file in an Azure Storage account outside of Fabric. The solution must minimize

development effort.

What should you use to add the data?

- A. a pipeline
- B. a copy job
- C. a Dataflow Gen2
- **D. a shortcut**

**Answer: D**

Explanation:

Comprehensive Detailed Explanation

Requirement

Tenant: Fabric tenant Tenant1

Data target: Lakehouse1

Data source: CSV file in an Azure Storage account (outside of Fabric)

Requirement: Minimize development effort

Step 1: Understand options

A). Dataflow Gen2

Used for ETL (transformations, cleansing, ingestion).

More effort because you need to build Power Query transformations.

Not minimal effort for simply exposing a file.

B). Shortcut

Fabric supports creating shortcuts to external data sources (OneLake, ADLS Gen2, Azure Blob, Dataverse, etc.).

Shortcut directly exposes external files/tables inside the lakehouse without copying or moving data.

This is the lowest-effort solution to access external CSV.

C). Copy job

Pipelines have a copy activity to physically copy data into Fabric.

Requires setup and execution. More development effort than a shortcut.

D). Pipeline

Used for orchestrating complex ETL workflows.

Overhead for this scenario.

Step 2: Correct Answer

Since the goal is simply to access a CSV in external storage with minimal development effort, the right solution is:

B). a shortcut

## NEW QUESTION # 61

You have a Microsoft Power BI project that contains a semantic model. You plan to use Azure DevOps for version control.

You need to modify the .gitignore file to prevent the data values from the data sources from being pushed to the repository. Which file should you reference?

- A. unappliedChanges.json
- **B. localSettings.json**
- C. cache.abf
- D. model.bim

**Answer: B**

Explanation:

When using Power BI Project (.pbip) with Git integration:

The .pbip project separates model metadata (schema, measures, relationships, etc.) from actual data values.

The localSettings.json file stores machine-specific and environment-specific settings, including data source credentials and local configurations. These should not be checked into version control to avoid exposing sensitive information or environment-specific configs.

Other options:

unappliedChanges.json # tracks unsaved changes, not data values.

model.bim # defines the semantic model schema (measures, relationships, metadata) and must be included in version control.

cache.abf# stores Analysis Services cache data, not part of source control.

Therefore, the correct file to exclude is localSettings.json.

Reference:

Power BI Projects and Git integration

localSettings.json in PBIP projects

## NEW QUESTION # 62

You have a Fabric tenant that contains a Microsoft Power BI report named Report 1. Report1 includes a Python visual. Data displayed by the visual is grouped automatically and duplicate rows are NOT displayed. You need all rows to appear in the visual. What should you do?

- A. Reference the columns in the Python code by index.
- B. Add a unique field to each row.
- C. Modify the Summarize By property for all columns.
- D. Modify the Sort Column By property for all columns.

**Answer: A**

Explanation:

To ensure all rows appear in the Python visual within a Power BI report, option C, adding a unique field to each row, is the correct solution. This will prevent automatic grouping by unique values and allow for all instances of data to be represented in the visual.

Reference = For more on Power BI Python visuals and how they handle data, please refer to the Power BI documentation.

Topic 2, Contoso, Ltd.

Overview

Contoso, Ltd. is a US-based health supplements company. Contoso has two divisions named Sales and Research. The Sales division contains two departments named Online Sales and Retail Sales. The Research division assigns internally developed product lines to individual teams of researchers and analysts.

Identity Environment

Contoso has a Microsoft Entra tenant named contoso.com. The tenant contains two groups named ResearchReviewersGroup1 and ResearchReviewersGroup2.

Data Environment

Contoso has the following data environment

- \* The Sales division uses a Microsoft Power BI Premium capacity.
- \* The semantic model of the Online Sales department includes a fact table named Orders that uses import mode. In the system of origin, the OrderID value represents the sequence in which orders are created.
- \* The Research department uses an on-premises, third-party data warehousing product.
- \* Fabric is enabled for contoso.com.
- \* An Azure Data Lake Storage Gen2 storage account named storage1 contains Research division data for a product line named Productline1. The data is in the delta format.
- \* A Data Lake Storage Gen2 storage account named storage2 contains Research division data for a product line named Productline2. The data is in the CSV format.

Planned Changes

Contoso plans to make the following changes:

- \* Enable support for Fabric in the Power BI Premium capacity used by the Sales division.
- \* Make all the data for the Sales division and the Research division available in Fabric.
- \* For the Research division, create two Fabric workspaces named Productline1ws and Productline2ws.
- \* In Productline1ws, create a lakehouse named LakehouseV
- \* In Lakehouse1, create a shortcut to storage1 named ResearchProduct.

Data Analytics Requirements

Contoso identifies the following data analytics requirements:

- \* All the workspaces for the Sales division and the Research division must support all Fabric experiences.
  - \* The Research division workspaces must use a dedicated, on-demand capacity that has per-minute billing.
  - \* The Research division workspaces must be grouped together logically to support OneLake data hub filtering based on the department name.
  - \* For the Research division workspaces, the members of ResearchReviewersGroup1 must be able to read lakehouse and warehouse data and shortcuts by using SQL endpoints.
  - \* For the Research division workspaces, the members of ResearchReviewersGroup2 must be able to read lakehouse data by using Lakehouse explorer.
  - \* All the semantic models and reports for the Research division must use version control that supports branching.
- Data Preparation Requirements
- Contoso identifies the following data preparation requirements:

- \* The Research division data for ProductHne2 must be retrieved from Lakehouse by using Fabric notebooks.
- \* All the Research division data in the lakehouses must be presented as managed tables in Lakehouse explorer.

#### Semantic Model Requirements

Contoso identifies the following requirements for implementing and managing semantic models;

- \* The number of rows added to the Orders table during refreshes must be minimized.
- \* The semantic models in the Research division workspaces must use Direct Lake mode.

#### General Requirements

Contoso identifies the following high-level requirements that must be considered for all solutions:

- \* Follow the principle of least privilege when applicable
- \* Minimize implementation and maintenance effort when possible.

### NEW QUESTION # 63

.....

Compared to other products in the industry, our DP-600 actual exam has a higher pass rate. If you really want to pass the exam, this must be the one that makes you feel the most suitable and effective. According the data which is provided and tested by our loyal customers, our pass rate of the DP-600 Exam Questions is high as 98% to 100%. It is hard to find such high pass rate in the market. And the quality of the DP-600 training guide won't let you down.
