Reliable CTAL-TM-001 Accurate Prep Material | Amazing Pass Rate For CTAL-TM-001: ISTQB Certified Tester Advanced Level - Test Manager | High-quality Valid CTAL-TM-001 Practice Materials

No study materials can boost so high efficiency and passing rate like our CTAL-TM-001 exam reference when preparing the test CTAL-TM-001 certification. Our CTAL-TM-001 exam practice questions provide the most reliable exam information resources and the most authorized expert verification. Our test bank includes all the possible questions and answers which may appear in the real exam and the quintessence and summary of the exam papers in the past. We strive to use the simplest language to make the learners understand our CTAL-TM-001 Exam Reference and passed the CTAL-TM-001 exam.

ISTQB Certified Tester Advanced Level - Test Manager Sample Questions (Q129-Q134):

NEW QUESTION # 129
Which of the following is required to apply an experience-based testing approach"

- A. Detailed requirements
- B. Usage models
- C. Tester knowledge of the system and its usage
- D. A full risk-assessment to support risk prioritization

Answer: C

Explanation:
Experience-Based Testing:
This testing approach relies on the testers' knowledge, experience, and intuition about the system and its usage rather than formal requirements or models.
It is often used when documentation is incomplete or time constraints limit more structured approaches.
Evaluation of Options:
A (Detailed requirements) and B (Usage models) are associated with structured testing techniques.
C is correct as experience-based testing depends on the testers' understanding of the system.
D (Full risk assessment) supports risk-based testing, not experience-based testing.
Reference and Syllabus Alignment:
Experience-based testing is detailed under "Test Techniques" (TM-1.4.1) in the ISTQB syllabus.

NEW QUESTION # 130
Your team has been assigned to test a loyalty card program for a supermarket chain. Because this is a highly competitive market significant investment has been made to determine the shortcomings of the products offered by competitors While the feature sets are mostly the same, there is a wide variance In usability and performance and the users perceptions of these quality characteristics Given only this information what test approach would be most appropriate?

- A. Risk-based
- B. Model-based
- C. Experience-based
- D. Requirements-based

Answer: A

Explanation:
* Context Analysis:
* Competitive market conditions emphasize the importance of usability, performance, and user perceptions, highlighting risks to user satisfaction and product success.
* Evaluation of Test Approaches:
* A. Model-based:
* Incorrect. This approach is used for validating predefined models, not addressing specific usability and performance risks.
* B. Experience-based:
* Incorrect. Useful for exploratory testing but does not directly align with prioritizing and addressing risks.
* C. Risk-based:
* Correct. Focuses on identifying and mitigating the highest risks, such as usability and performance in this context.
* D. Requirements-based:
* Incorrect. Emphasizes functional completeness, not specific quality characteristics like usability or performance.
* Syllabus Alignment:
* ISTQB Advanced Test Management syllabus highlights risk-based approaches as effective for addressing high-impact quality characteristics (TM-1.3.4).

NEW QUESTION # 131
You have directed one of your testers to construct a "smoke test" to execute against new builds prior to starting formal testing. This is an example of which software development lifecycle activity?
[1]

- A. Change and configuration management
- B. Project management
- C. Technical support
- D. Software development and maintenance

Answer: A

Explanation:

The correct answer is C. Change and configuration management. This is because a smoke test is a type of test that checks the basic functionality and stability of a new build before proceeding to more detailed testing. A smoke test is an example of change and configuration management, which is the activity of controlling and tracking the changes made to the software and its configuration items throughout the software development lifecycle. NEW QUESTION # 132

What is the Risk Priority Number for risk item number 2? 2 credits

- A. 0
- B. 1
- C. 2
- D. 3

Answer: A

NEW QUESTION # 133

Your team has been assigned to a new project You have a mix of manual testers and automation engineers but everyone is currently doing manual testing. The development learn has already decided to use DevOps as its approach but they have never used it before and are happy to take your input Unfortunately, about 50% of the development is completed already In the testing your team is doing they are finding that about 40% of the defects they catch are actually regressions caused by other changes Given this information what should you do to help mitigate risk'?

- A. Review the policies regarding defect reporting and ensure your team is adding all the necessary information to each defect report
- B. Implement code reviews for the development team and require tester signoff before code can be released into the pipeline
- C. Optimize the test environment to provide faster testing with more accurate test data and better testing tools to provide wider coverage
- D. Pivot part of the team from manual testing to test automation development to address the regression risk and implement better quality gates to reduce regressions

Answer: D

Explanation:
Identifying the Risk:
High regression rates (40%) indicate a need to improve regression testing capabilities and reduce risks.
Test automation addresses regressions effectively by enabling faster and repeated testing.
Evaluation of Options:
A is irrelevant to the regression risks highlighted.
B is correct because it emphasizes test automation for regressions and quality gates to prevent defect leaks.
C is partially valid but does not directly address regression issues.
D focuses on development practices, which, while helpful, does not directly reduce regression risks.
Reference and Syllabus Alignment:
This aligns with ISTQB guidelines on balancing manual and automated testing in regression scenarios (TM-1.6.3, TM-1.4.2).

NEW QUESTION # 134

......

What is more difficult is not only passing the ISTQB CTAL-TM-001 Certification Exam, but the acute anxiety and the excessive burden also make the candidate nervous to qualify for the ISTQB Certified Tester Advanced Level - Test Manager certification. If you are going through the same tough challenge, do not worry because ISTQB is here to assist you.
