

# 시험준비에 가장 좋은 C-TS470-2412 퍼펙트 최신버전 덤프 덤프공부문제

## Complete Guide to Preparing for the SAP C\_TS470\_2412 Exam

SAP C\_TS470\_2412 Exam Guide

www.ERPPrep.com  
Prepare for the SAP C\_TS470\_2412 certification exam with this comprehensive guide. Gain in-depth knowledge of key topics, exam format, and best practices to enhance your understanding. Access expert strategies, sample questions, and study resources to boost your confidence and ensure success in the SAP S/4HANA Cloud Private Edition, Service certification exam.

BONUS!!! DumpTOP C-TS470-2412 시험 문제집 전체 버전을 무료로 다운로드하세요: <https://drive.google.com/open?id=11ep-rbOF45cYTA-tRqquFJkEaFqRasM0>

IT인증자격증만 소지한다면 일상생활에서 많은 도움이 될 것입니다. 하지만 문제는 어떻게 간단하게 시험을 패스 할것인가 입니다. DumpTOP은 IT전문가들이 제공한 시험관련 최신 연구자료들을 제공해드립니다. DumpTOP을 선택함으로써 여러분은 성공도 선택한것이라고 볼수 있습니다. DumpTOP의 SAP 인증C-TS470-2412시험대비 덤프로 SAP 인증C-TS470-2412시험을 패스하세요.

## SAP C-TS470-2412 시험요강:

주제	소개
주제 1	<ul style="list-style-type: none"><li>Organizational Data: This section of the exam measures the skills of Enterprise Data Managers and covers the structuring and management of organizational data within SAP systems. It focuses on defining key organizational elements, configuring data hierarchies, and ensuring proper integration across business units. Mastery of this domain is essential for maintaining accurate reporting structures, workflow efficiency, and compliance with enterprise-wide data governance policies.</li></ul>

주제 2	<ul style="list-style-type: none"> <li>Service Order Management: This section of the exam measures the skills of SAP Service Operations Consultants and covers the end-to-end management of service orders within SAP. It includes the creation, processing, tracking, and fulfillment of service requests, ensuring seamless coordination between departments. Proper service order management enables organizations to enhance customer satisfaction, streamline operations, and improve response times through integrated workflows.</li> </ul>
주제 3	<ul style="list-style-type: none"> <li>Managing Clean Core: This section of the exam measures the skills of SAP Solution Architects and covers the principles of maintaining a clean core within SAP systems. It focuses on strategies for minimizing customizations, leveraging standard SAP functionalities, and ensuring system integrity while allowing for necessary extensions. The goal is to enhance system performance, ease upgrades, and maintain long-term sustainability.</li> </ul>
주제 4	<ul style="list-style-type: none"> <li>Service Master Data: This section of the exam measures the skills of SAP Master Data Specialists and covers the management and configuration of service-related master data within SAP environments. It includes defining service objects, managing attributes, and ensuring accurate data flow across modules. Effective service master data management helps improve service delivery, optimize resource utilization, and maintain consistency across business processes.</li> </ul>

## SAP C-TS470-2412인증덤프 샘플 다운로드 - C-TS470-2412높은 통과율 공부문제

만약 SAP인증C-TS470-2412시험을 통과하고 싶다면, Pass4Tes의 선택을 추천합니다. Pass4Tes선택은 가장 적은 투자로 많은 이익을 가져올 수 있죠, Pass4Tes에서 제공하는 SAP인증C-TS470-2412시험덤프로 시험패스는 문제없습니다. DumpTOP는 전문적으로 인증 시험관련문제와 답을 만들어내는 제작팀이 있으며, Pass4Tes 이미지 또한 업계에서도 이름이 있답니다

### 최신 SAP Certified Associate C-TS470-2412 무료샘플문제 (Q39-Q44):

#### 질문 # 39

To which of the following can you assign maintenance packages? Note: There are 2 correct answers to this question.

- A. A maintenance strategy
- B. A task list
- C. A service technician
- D. A work schedule

정답: A,B

#### 설명:

In SAP S/4HANA Cloud Private Edition, Service, maintenance packages define the intervals or cycles (e.g., every 6 months, 1,000 hours) at which maintenance activities are performed within a maintenance plan. They are assigned to:

- \* Task list (C): Maintenance packages can be linked to operations in a task list to specify when each operation is due.
- \* Maintenance strategy (D): A maintenance strategy groups multiple packages (e.g., time-based or performance-based cycles) and is assigned to a maintenance plan, which then applies the packages.
- \* Service technician (A): Technicians are assigned to operations, not maintenance packages directly.
- \* Work schedule (B): This is not a standard object in SAP for assigning maintenance packages.

"Maintenance packages are assigned to task lists and maintenance strategies to define the scheduling intervals for maintenance activities in a plan."

#### 질문 # 40

What are possible steps in an in-house repair process in SAP S/4HANA Cloud Private Edition, Service? Note: There are 3 correct answers to this question.

- A. Create an in-house repair for a repair request from a customer.

- B. Generate a repair object based on the repair order status.
- C. Post a goods receipt for a returned object.
- D. Perform a pre-check for an in-house repair and make a decision
- E. Create an in-house repair after a pre-check for a repair object.

정답: A,C,D

설명:

The in-house repair process (scope item 3XK) in SAP S/4HANA Cloud Private Edition, Service involves handling customer repair requests and processing returned objects. Key steps include:

- \* Perform a pre-check for an in-house repair and make a decision: A pre-check assesses the repair object's condition to decide whether to proceed with repair, reject it, or take other actions. This is a standard initial step.
- \* Post a goods receipt for a returned object: When a customer returns a defective item, a goods receipt is posted (e.g., via transaction MIGO or a service order), creating a repair object in the system.
- \* Create an in-house repair for a repair request from a customer: This step involves creating a repair order (e.g., transaction type REPA) based on a customer's request, initiating the process.
- \* Generate a repair object based on the repair order status: Repair objects are not generated from order status; they are created upon goods receipt or manually.
- \* Create an in-house repair after a pre-check for a repair object: While a pre-check precedes repair, the repair order is typically created first, not after the pre-check as a separate step. These steps align with the SAP Best Practices for in-house repair. "The in-house repair process includes performing a pre- check, posting goods receipt for returns, and creating a repair order based on customer requests." (SAP Signavio Process Navigator, In-House Repair).

질문 # 41

What are the prerequisites when creating a configurable product? Note: There are 2 correct answers to this question.

- A. Defining configurable characteristics
- B. Assigning a characteristic to a serial number
- C. Assigning a variant class to a product
- D. Creating a configuration profile

정답: C,D

설명:

A configurable product in SAP S/4HANA Cloud Private Edition, Service allows customization via variant configuration. The prerequisites are:

- \* Assigning a variant class to a product (A): A variant class defines the configurable characteristics (e.g., size, color) and is assigned to the product master.
- \* Creating a configuration profile (D): The configuration profile links the product to its variant class and defines the configuration logic (e.g., dependencies).
- \* B: Characteristics are defined separately and linked via the variant class, not directly as a prerequisite.
- \* C: Characteristics are not assigned to serial numbers; serial numbers track instances, not configurations.

"Creating a configurable product requires assigning a variant class to the product and creating a configuration profile to enable variant configuration."

질문 # 42

Which assignment is required in a cross-plant planning scenario?

- A. A planner group to several planning plants
- B. Several planning plants to a maintenance plant
- C. Several maintenance plants to a planning plant
- D. A planner group to several maintenance plants

정답: C

설명:

In a cross-plant planning scenario, maintenance activities span multiple plants. The correct answer is B. Let's unpack this.

Cross-Plant Planning Context:

One planning plant oversees maintenance for multiple maintenance plants (where technical objects reside).

### Why Several Maintenance Plants to a Planning Plant?

The planning plant is the central hub for scheduling and resource allocation. Maintenance plants (e.g., Plant 0001, Plant 0002) are assigned to it (e.g., Plant 1000) in customizing (SPRO # Enterprise Structure # Assignment # Plant Maintenance). This ensures a single point of control for work orders and plans across plants.

### Why Not the Others?

- \* A:Planner groups are assigned within a plant, not across plants directly.
- \* C:Multiple planning plants for one maintenance plant is illogical.
- \* D:Planner groups operate within a planning plant, not across multiple.

### Example:

Planning Plant 1000 manages maintenance for Plants 0001 and 0002.

"In cross-plant planning, several maintenance plants are assigned to a planning plant to centralize maintenance scheduling."

### 질문 # 43

Which of the following objects are relevant to determine the correct plant and storage location in service order processing when reserving spare part items? Note: There are 3 correct answers to this question.

- A. Service organization
- B. Sales area
- C. Service team
- D. Service employee
- E. Work center

정답: A,D,E

### 설명:

In SAP S/4HANA Cloud Private Edition, Service, when reserving spare parts in service order processing (e.g., scope item 3D2: Service Order Management and Monitoring), the system determines the plant and storage location based on specific objects:

- \* Service organization: This defines the organizational unit responsible for the service, which is linked to a plant. The plant is a key attribute in logistics and inventory management, making it critical for spare part reservations.
- \* Work center: The work center specifies where the service is performed and is directly tied to a plant. It influences the storage location from which spare parts are drawn, especially in in-house or field service scenarios.
- \* Service employee: The employee assigned to the service order can influence the plant and storage location, particularly in field service scenarios where parts are reserved from a technician's stock (e.g., van stock linked to a specific storage location).
- \* Sales area: While relevant for sales processes, it does not directly determine plant or storage location for spare parts in service order processing.
- \* Service team: Teams are organizational groupings but do not have a direct system linkage to plant /storage location determination for reservations. This logic is part of the integration between service management and logistics in SAP S/4HANA, ensuring accurate inventory allocation."The plant and storage location for spare parts in a service order are derived from the service organization, work center, and assigned service employee." (SAP Help Portal, Service Order Processing).
