BONUS!!! Download part of Prep4SureReview NGFW-Engineer dumps for free: <https://drive.google.com/open?id=1n4ifNwWcQShd0pmLdDbpaJEiR9HGwaE0>

It is well known that obtaining such a NGFW-Engineer certificate is very difficult for most people, especially for those who always think that their time is not enough to learn efficiently. With our NGFW-Engineer test prep, you don't have to worry about the complexity and tediousness of the operation. As long as you enter the learning interface of our soft test engine of NGFW-Engineer Quiz guide and start practicing on our Windows software, you will find that there are many small buttons that are designed to better assist you in your learning.

If you really want to pass the real test and get the Palo Alto Networks certification? At first, you should be full knowledgeable and familiar with the NGFW-Engineer certification. Even if you have acquired the knowledge about the NGFW-Engineer actual test, the worries still exist. You do not know what questions you may be faced with when attending the real test. Now, you need the NGFW-Engineer practice dumps which can simulate the actual test to help you. Our NGFW-Engineer training dumps can ensure you pass at first attempt.

>> NGFW-Engineer Exam Collection <<

100% Pass NGFW-Engineer - Palo Alto Networks Next-Generation Firewall Engineer –Trustable Exam Collection

It is well known that even the best people fail sometimes, not to mention the ordinary people. In face of the NGFW-Engineer exam, everyone stands on the same starting line, and those who are not excellent enough must do more. Every year there are a large number of people who can't pass the NGFW-Engineer Exam smoothly. But we are professional in this career for over ten years. And our NGFW-Engineer study materials will help you pass the exam easily.

Palo Alto Networks Next-Generation Firewall Engineer Sample Questions (Q27-Q32):

NEW QUESTION # 27

An organization runs multiple Kubernetes clusters both on-premises and in public clouds (AWS, Azure, GCP). They want to deploy the Palo Alto Networks CN-Series NGFW to secure east-west traffic within each cluster, maintain consistent Security policies across all environments, and dynamically scale as containerized workloads spin up or down. They also plan to use a centralized Panorama instance for policy management and visibility.

Which approach meets these requirements?

- A. Install standalone CN-Series instances in each cluster with local configuration only. Export daily policy configuration snapshots to Panorama for recordkeeping, but do not unify policy enforcement.
- B. Deploy a single CN-Series firewall in the on-premises data center to process traffic for all clusters, connecting remote clusters via VPN or peering. Manage this single instance through Panorama.
- C. Use Kubernetes-native deployment tools (e.g., Helm) to deploy CN-Series in each cluster, ensuring local insertion into the service mesh or CNI. Manage all CN-Series firewalls centrally from Panorama, applying uniform Security policies across on-premises and cloud clusters.
- D. Configure the CN-Series only in public cloud clusters, and rely on Kubernetes Network Policies for on-premises cluster security. Synchronize partial policy information into Panorama manually as needed.

Answer: C

Explanation:

This approach meets all the requirements for securing east-west traffic within each Kubernetes cluster, maintaining consistent security policies across on-premises and cloud environments, and allowing for dynamic scaling of the CN-Series NGFWs as containerized workloads spin up or down. By using Kubernetes-native deployment tools (such as Helm), the CN-Series NGFWs can be deployed and scaled dynamically within each cluster. Local insertion into the service mesh or CNI ensures that the NGFW can inspect traffic at the appropriate points within the cluster.

Centralized management via Panorama ensures that security policies are uniform across both on-premises and cloud environments, providing visibility and control across all clusters.

NEW QUESTION # 28

Without performing a context switch, which set of operations can be performed that will affect the operation of a connected firewall on the Panorama GUI?

- A. Modification of pre-security rules, modification of a virtual router, modification of an IKE Gateway Network Profile
- B. Restarting the local firewall, running a packet capture, accessing the firewall CLI
- C. Modification of post NAT rules, creation of new views on the local firewall ACC tab, creation of local custom reports
- D. Modification of local security rules, modification of a Layer 3 interface, modification of the firewall device hostname

Answer: D

Explanation:

In Panorama, without performing a context switch, the administrator can perform local configuration tasks directly on the connected firewall. The following operations can be done:

Modification of local security rules: Security rules can be modified directly on the connected firewall from the Panorama GUI.

Modification of a Layer 3 interface: Changes to the Layer 3 interfaces on the connected firewall can be done from Panorama, without needing to switch to the firewall's local interface.

Modification of the firewall device hostname: The firewall's hostname can be changed via Panorama.

NEW QUESTION # 29

How does a Palo Alto Networks NGFW respond when the preemptive hold time is set to 0 minutes during configuration of route monitoring?

- A. It reinstalls the route into the routing information base (RIB) as soon as the path comes up.
- B. It accepts the configuration but throws a warning message.
- C. It does not accept the configuration.
- D. It removes the static route because 0 is a NULL value

Answer: A

Explanation:

When the preemptive hold time is set to 0 minutes in route monitoring, the firewall is configured to immediately reinstall the route into the Routing Information Base (RIB) as soon as the monitored path comes up. This essentially means that the firewall will not wait for any predefined hold time before reestablishing the route once the monitoring condition is met, ensuring a faster recovery of the route.

NEW QUESTION # 30

To maintain security efficacy of its public cloud resources by using native tools, a company purchases Cloud NGFW credits to replicate the Panorama, PA-Series, and VM-Series devices used in physical data centers. Resources exist on AWS and Azure: The AWS deployment is architected with AWS Transit Gateway, to which all resources connect. The Azure deployment is architected with each application independently routing traffic. The engineer deploying Cloud NGFW in these two cloud environments must account for the following:

Minimize changes to the two cloud environments

Scale to the demands of the applications while using the least amount of compute resources. Allow the company to unify the Security policies across all protected areas. Which two implementations will meet these requirements? (Choose two.)

- A. Deploy Cloud NGFW for Azure in vWAN, create a vWAN to route all appropriate traffic to the Cloud NGFW attached to the vWAN, and manage the policy with local rules.
- B. Deploy a VM-Series firewall in AWS in each VPC, create an IPSec tunnel between AWS and Azure, and manage the policy with Panorama.
- C. Deploy Cloud NGFW for Azure in vNET/s, update the vNET/s routing to path traffic through the deployed NGFWs, and manage the policy with Panorama.
- D. Deploy Cloud NGFW for AWS in a centralized Security VPC, update the Transit Gateway to route all appropriate traffic through the Security VPC, and manage the policy with Panorama.

Answer: C,D

Explanation:

To meet the company's requirements - minimizing changes to the cloud environments, optimizing compute resources, and unifying security policies - the best approach is to deploy Cloud NGFW solutions natively for AWS and Azure while managing policies centrally with Panorama.

In Azure, using Cloud NGFW for Azure deployed within vNETs allows traffic to be routed through security appliances efficiently without requiring a complete re-architecture. This approach aligns with Azure's existing routing mechanism while maintaining security. In AWS, deploying Cloud NGFW for AWS in a centralized Security VPC and integrating it with AWS Transit Gateway enables traffic inspection for all connected VPCs without modifying individual workloads. This method ensures efficient scaling and minimal infrastructure changes while maintaining security consistency.

NEW QUESTION # 31

How does a Palo Alto Networks firewall choose the best route when it receives routes for the same destination from different routing protocols?

- A. The route that was received first will be entered into the forwarding table, and all subsequent routes will be rejected.
- B. It compares the administrative distance and chooses the one with the highest value.
- C. It compares the administrative distance and chooses the one with the lowest value.
- D. It will attempt to load balance the traffic across all routes.

Answer: C

Explanation:

When a Palo Alto Networks firewall receives routes for the same destination from different routing protocols, it uses the administrative distance (AD) to determine the best route. The administrative distance is a measure of the trustworthiness of a route, with a lower value indicating higher preference. The firewall will choose the route with the lowest administrative distance to populate its forwarding table.

NEW QUESTION # 32

.....

NGFW-Engineer study material is suitable for all people. Whether you are a student or an office worker, whether you are a veteran or a rookie who has just entered the industry, NGFW-Engineer test answers will be your best choice. For office workers, NGFW-

Engineer test dumps provide you with more flexible study time. You can download learning materials to your mobile phone and study at anytime, anywhere. And as an industry rookie, those unreadable words and expressions in professional books often make you feel mad, but NGFW-Engineer Study Materials will help you to solve this problem perfectly. All the language used in NGFW-Engineer study materials is very simple and easy to understand. With NGFW-Engineer test answers, you don't have to worry about that you don't understand the content of professional books. You also don't need to spend expensive tuition to go to tutoring class. NGFW-Engineer test dumps can help you solve all the problems in your study.
