P.S. Free & New Databricks-Certified-Data-Engineer-Associate dumps are available on Google Drive shared by Dumpexams:
https://drive.google.com/open?id=1w0_ax9FpGe4uCp1nrLgsEPulH9lfbeyZ

Dumpexams provides Databricks Databricks-Certified-Data-Engineer-Associate desktop-based practice software for you to test your knowledge and abilities. The Databricks-Certified-Data-Engineer-Associate desktop-based practice software has an easy-to-use interface. You will become accustomed to and familiar with the free demo for Databricks Databricks-Certified-Data-Engineer-Associate Exam Questions. Exam self-evaluation techniques in our Databricks-Certified-Data-Engineer-Associate desktop-based software include randomized questions and timed tests. These tools assist you in assessing your ability and identifying areas for improvement to pass the Databricks Certified Data Engineer Associate Exam exam.

Learning knowledge is not only to increase the knowledge reserve, but also to understand how to apply it, and to carry out the theories and principles that have been learned into the specific answer environment. The Databricks Certified Data Engineer Associate Exam exam dumps are designed efficiently and pointedly, so that users can check their learning effects in a timely manner after completing a section. Our Databricks-Certified-Data-Engineer-Associate test material is updating according to the precise of the real exam. Our Databricks Certified Data Engineer Associate Exam exam dumps will help you to conquer all difficulties you may encounter.

Databricks-Certified-Data-Engineer-Associate Study Center, Questions

Databricks-Certified-Data-Engineer-Associate Pdf

We have left some space for you to make notes on the PDF version of the Databricks-Certified-Data-Engineer-Associate study materials. In a word, you need not to spend time on adjusting the PDF version of the Databricks-Certified-Data-Engineer-Associate exam questions. You can directly print it on papers. It is easy to carry. Whenever and wherever you go, you can take out and memorize some questions. There will be detailed explanation for the difficult questions of the Databricks-Certified-Data-Engineer-Associate Preparation quiz. So you do not need to worry about that you cannot understand them.

Databricks Certified Data Engineer Associate Exam covers a range of topics related to data engineering, including data ingestion, ETL (extract, transform, load) processes, data modeling, and data warehousing. Databricks-Certified-Data-Engineer-Associate Exam also covers Databricks-specific tools and technologies, such as Databricks Delta Lake and Databricks Runtime. Passing the exam requires a deep understanding of these topics and the ability to apply that knowledge in real-world scenarios. Successful candidates will have demonstrated their ability to design and implement reliable, scalable, and efficient data pipelines using Databricks.

Databricks Certified Data Engineer Associate Exam Sample Questions (Q135-Q140):

NEW QUESTION # 135

A data engineer has been using a Databricks SQL dashboard to monitor the cleanliness of the input data to a data analytics dashboard for a retail use case. The job has a Databricks SQL query that returns the number of store-level records where sales is equal to zero. The data engineer wants their entire team to be notified via a messaging webhook whenever this value is greater than 0.

Which of the following approaches can the data engineer use to notify their entire team via a messaging webhook whenever the number of stores with \$0 in sales is greater than zero?

- A. They can set up an Alert without notifications.
- B. They can set up an Alert with a custom template.
- C. They can set up an Alert with a new email alert destination.
- D. They can set up an Alert with one-time notifications.
- E. They can set up an Alert with a new webhook alert destination.

Answer: E

Explanation:

A webhook alert destination is a notification destination that allows Databricks to send HTTP POST requests to a third-party endpoint when an alert is triggered. This enables the data engineer to integrate Databricks alerts with their preferred messaging or collaboration platform, such as Slack, Microsoft Teams, or PagerDuty.

To set up a webhook alert destination, the data engineer needs to create and configure a webhook connector in their messaging platform, and then add the webhook URL to the Databricks notification destination. After that, the data engineer can create an alert for their Databricks SQL query, and select the webhook alert destination as the notification destination. The alert can be configured with a custom condition, such as when the number of stores with \$0 in sales is greater than zero, and a custom message template, such as "Alert:

{number_of_stores} stores have \$0 in sales". The alert can also be configured with a recurrence interval, such as every hour, to check the query result periodically. When the alert condition is met, the data engineer and their team will receive a notification via the messaging webhook, with the custom message and a link to the Databricks SQL query. The other options are either not suitable for sending notifications via a messaging webhook (A, B, E), or not suitable for sending recurring notifications. References: Databricks Documentation - Manage notification destinations, Databricks Documentation - Create alerts for Databricks SQL queries, Databricks Documentation - Configure alert conditions and messages.

NEW QUESTION # 136

A data engineer is getting a partner organization up to speed with Databricks account. Both teams share some business use cases. The data engineer has to share some of your Unity-Catalog managed delta tables and the notebook jobs creating those tables with the partner organization.

How can the data engineer seamlessly share the required information?

- A. Share access to codebase via Github and allow them to ingest datasets from your Datalake.
- B. Zip all the code and share via email and allow data ingestion from your data lake
- C. Share required datasets and notebooks via Delta Sharing. Manage permissions via Unity Catalog.

- D. Data and Notebooks can be shared simply using Unity Catalog.

Answer: C

NEW QUESTION # 137

A Delta Live Table pipeline includes two datasets defined using STREAMING LIVE TABLE. Three datasets are defined against Delta Lake table sources using LIVE TABLE.

The table is configured to run in Production mode using the Continuous Pipeline Mode.

Assuming previously unprocessed data exists and all definitions are valid, what is the expected outcome after clicking Start to update the pipeline?

- A. All datasets will be updated once and the pipeline will shut down. The compute resources will be terminated.
- B. All datasets will be updated at set intervals until the pipeline is shut down. The compute resources will persist to allow for additional testing.
- C. All datasets will be updated once and the pipeline will shut down. The compute resources will persist to allow for additional testing.
- D. All datasets will be updated at set intervals until the pipeline is shut down. The compute resources will be deployed for the update and terminated when the pipeline is stopped.
- E. All datasets will be updated once and the pipeline will persist without any processing. The compute resources will persist but go unused.

Answer: C

NEW QUESTION # 138

A data engineer has configured a Structured Streaming job to read from a table, manipulate the data, and then perform a streaming write into a new table.

The code block used by the data engineer is below:

If the data engineer only wants the query to process all of the available data in as many batches as required, which of the following lines of code should the data engineer use to fill in the blank?

- A. `processingTime(1)`
- B. `trigger(parallelBatch=True)`
- C. `trigger(availableNow=True)`
- D. `trigger(processingTime="once")`
- E. `trigger(continuous="once")`

Answer: C

Explanation:

Explanation

NEW QUESTION # 139

A Delta Live Table pipeline includes two datasets defined using STREAMING LIVE TABLE. Three datasets are defined against Delta Lake table sources using LIVE TABLE.

The table is configured to run in Development mode using the Continuous Pipeline Mode.

Assuming previously unprocessed data exists and all definitions are valid, what is the expected outcome after clicking Start to update the pipeline?

- A. All datasets will be updated once and the pipeline will shut down. The compute resources will be terminated.
- B. All datasets will be updated at set intervals until the pipeline is shut down. The compute resources will persist to allow for additional testing.
- C. All datasets will be updated once and the pipeline will shut down. The compute resources will persist to allow for additional testing.
- D. All datasets will be updated at set intervals until the pipeline is shut down. The compute resources will persist until the pipeline is shut down.
- E. All datasets will be updated once and the pipeline will persist without any processing. The compute resources will persist

but go unused.

Answer: D

Explanation:

The Continuous Pipeline Mode for Delta Live Tables allows the pipeline to run continuously and process data as it arrives. This mode is suitable for streaming ingest and CDC workloads that require low-latency updates. The Development mode for Delta Live Tables allows the pipeline to run on a dedicated cluster that is not shared with other pipelines. This mode is useful for testing and debugging the pipeline logic before deploying it to production. Therefore, the correct answer is B, because the pipeline will run continuously on a dedicated cluster until it is manually stopped, and the compute resources will be released only after the pipeline is shut down. Reference: Databricks Documentation - Configure pipeline settings for Delta Live Tables, Databricks Documentation - Continuous vs. triggered pipeline execution, Databricks Documentation - Development vs. production mode.

NEW QUESTION # 140

.....

Today is the best time to become competitive Dumpexams and updated in the market. You can do this easily. Just enroll in the Databricks-Certified-Data-Engineer-Associate exam and start Databricks-Certified-Data-Engineer-Associate certification exam preparation Databricks Databricks-Certified-Data-Engineer-Associate Exam Dumps. Solutions Databricks-Certified-Data-Engineer-Associate exam dumps after paying an affordable Databricks Certified Data Engineer Associate Exam (Databricks-Certified-Data-Engineer-Associate) exam questions charge and start this journey without wasting further time.
