Providing You Marvelous High Databricks-Certified-Data-Engineer-Associate Passing Score with 100% Passing Guarantee

A lot of office workers in their own professional development encounter bottleneck and begin to choose to continue to get the test Databricks-Certified-Data-Engineer-Associate certification to the school for further study. We all understand the importance of education, and it is essential to get the Databricks-Certified-Data-Engineer-Associate certification. Learn the importance of self-evident, and the stand or fall of learning outcome measure, in reality of hiring process, for the most part through your grades of high and low, as well as you acquire the qualification of how much remains. Therefore, the Databricks-Certified-Data-Engineer-Associate practice materials can give users more advantages in the future job search, so that users can stand out in the fierce competition and become the best.

Achieving the Databricks Certified Data Engineer Associate certification demonstrates that an individual has the skills and knowledge needed to work with big data, data engineering, and distributed systems using Databricks. Databricks Certified Data Engineer Associate Exam certification is recognized globally and can help professionals advance their careers in data engineering.

>> High Databricks-Certified-Data-Engineer-Associate Passing Score <<

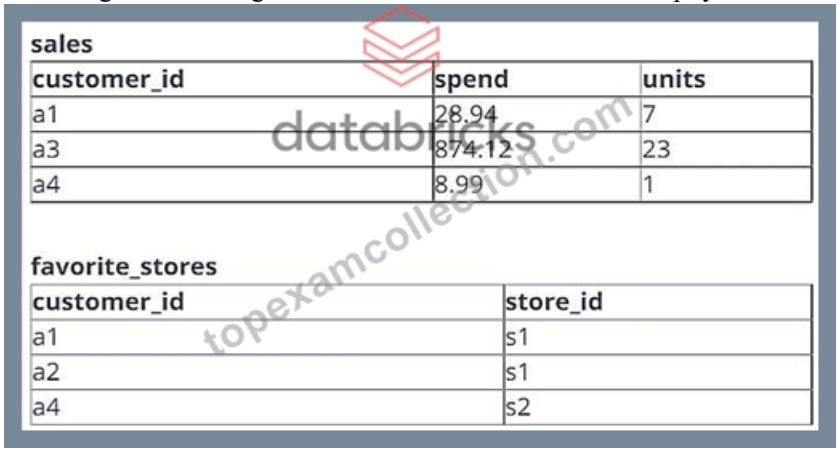
Databricks-Certified-Data-Engineer-Associate Free Updates | Practice Databricks-Certified-Data-Engineer-Associate Exam Online

This product is enough to get ready for the Databricks-Certified-Data-Engineer-Associate test on the first attempt. Three formats are easy to use and meet the needs of every Databricks Certified Data Engineer Associate Exam (Databricks-Certified-Data-Engineer-Associate) test applicant. The Databricks Databricks-Certified-Data-Engineer-Associate practice material's three formats are Desktop practice test software, web-based practice exam, and PDF.

GAQM Databricks-Certified-Data-Engineer-Associate is a certification exam designed to test the skills and knowledge of individuals in the field of data engineering. Databricks-Certified-Data-Engineer-Associate exam is created by GAQM, a leading global provider of certification programs for professionals in various industries. Databricks Certified Data Engineer Associate Exam certification is intended for those who work with Databricks and want to demonstrate their expertise in designing, building, and maintaining data pipelines using this technology.

Databricks Certified Data Engineer Associate Exam Sample Questions (Q124-Q129):

NEW QUESTION # 124
A data engineer is working with two tables. Each of these tables is displayed below in its entirety.



sales

customer_id	spend	units
a1	28.94	7
a3	874.12	23
a4	8.99	1

favorite_stores

customer_id	store_id
a1	s1
a2	s1
a4	s2

The data engineer runs the following query to join these tables together:

```
SELECT
    sales.customer_id,
    sales.spend,
    favorite_stores.store_id
FROM sales
LEFT JOIN favorite_stores
ON sales.customer_id = favorite_stores.customer_id;
```

Which of the following will be returned by the above query?

A.

customer_id	spend	store_id
a1	28.94	s1
a4	8.99	s2

B.

customer_id	spend	units	store_id
a1	28.94	7	s1
a4	8.99	1	s2

C.

customer_id	spend	store_id
a1	28.94	s1
a3	874.12	NULL
a4	8.99	s2

D.

customer_id	spend	store_id
a1	28.94	s1
a2	NULL	s1
a3	874.12	NULL
a4	8.99	s2

E.

customer_id	spend	store_id
a1	28.94	s1
a2	NULL	s1
a4	8.99	s2

databricks
topexamcollection.com

- A. Option C
- B. Option A
- C. Option D
- D. Option B
- E. Option E

Answer: B

Explanation:
Option A is the correct answer because it shows the result of an INNER JOIN between the two tables. An INNER JOIN returns only the rows that have matching values in both tables based on the join condition. In this case, the join condition is ON a.customer_id = c.customer_id, which means that only the rows that have the same customer ID in both tables will be included in the output. The output will have four columns:
customer_id, name, account_id, and overdraft_amt. The output will have four rows, corresponding to the four customers who have accounts in the account table.
The use of INNER JOIN can be referenced from Databricks documentation on SQL JOIN or from other sources like W3Schools or GeeksforGeeks.

NEW QUESTION # 125
A data engineer is designing a data pipeline. The source system generates files in a shared directory that is also used by other processes. As a result, the files should be kept as is and will accumulate in the directory. The data engineer needs to identify which files are new since the previous run in the pipeline, and set up the pipeline to only ingest those new files with each run.

Which of the following tools can the data engineer use to solve this problem?

- A. Databricks SQL
- B. Delta Lake
- C. Data Explorer
- D. Unity Catalog
- E. Auto Loader

Answer: E

NEW QUESTION # 126
A data engineer has three tables in a Delta Live Tables (DLT) pipeline. They have configured the pipeline to drop invalid records at each table. They notice that some data is being dropped due to quality concerns at some point in the DLT pipeline. They would like to determine at which table in their pipeline the data is being dropped.
Which of the following approaches can the data engineer take to identify the table that is dropping the records?

- A. They can set up DLT to notify them via email when records are dropped.
- B. They cannot determine which table is dropping the records.
- C. They can set up separate expectations for each table when developing their DLT pipeline.
- D. They can navigate to the DLT pipeline page, click on the "Error" button, and review the present errors.
- E. They can navigate to the DLT pipeline page, click on each table, and view the data quality statistics.

Answer: E

Explanation:
Explanation
To identify the table in a Delta Live Tables (DLT) pipeline where data is being dropped due to quality concerns, the data engineer can navigate to the DLT pipeline page, click on each table in the pipeline, and view the data quality statistics. These statistics often include information about records dropped, violations of expectations, and other data quality metrics. By examining the data quality statistics for each table in the pipeline, the data engineer can determine at which table the data is being dropped.

NEW QUESTION # 127
A data engineer is processing ingested streaming tables and needs to filter out NULL values in the order_datetime column from the raw streaming table orders_raw and store the results in a new table orders_valid using DLT.
Which code snippet should the data engineer use?

- A.
```
CREATE OR REFRESH STREAMING TABLE orders_valid(
  CONSTRAINT valid_date
  EXPECT (order_datetime IS NOT NULL)
  ON VIOLATION DROP ROW
)
AS SELECT * FROM STREAM orders_raw;
```
- B.
```
CREATE OR REFRESH STREAMING TABLE orders_valid
(
  CONSTRAINT valid_date EXPECT (order_datetime IS NOT NULL)
  ON VIOLATION DROP ROW
)
AS SELECT * FROM orders_raw;
```
- C.
```
CREATE OR REFRESH STREAMING TABLE orders_valid
AS
SELECT *
FROM STREAM(orders_raw)
WHERE order_datetime IS NOT NULL;
```

```
CREATE OR REPLACE STREAMING TABLE orders_valid
(
  FILTER (order_datetime IS NOT NULL)
)
AS SELECT * FROM STREAM(orders_raw);
```

- D.

Answer: C

NEW QUESTION # 128
A data engineer needs to apply custom logic to identify employees with more than 5 years of experience in array column employees in table stores. The custom logic should create a new column exp_employees that is an array of all of the employees with more than 5 years of experience for each row. In order to apply this custom logic at scale, the data engineer wants to use the FILTER higher-order function.
Which of the following code blocks successfully completes this task?

A.
```
SELECT
    store_id,
    employees,
    FILTER (employees, i -> i.years_exp > 5) AS exp_employees
FROM stores;
```

B.
```
SELECT
    store_id,
    employees,
    FILTER (exp_employees, years_exp > 5) AS exp_employees
FROM stores;
```

C.
```
SELECT
    store_id,
    employees,
    FILTER (employees, years_exp > 5) AS exp_employees
FROM stores;
```

D.
```
SELECT
    store_id,
    employees,
    CASE WHEN employees.years_exp > 5 THEN employees
         ELSE NULL
    END AS exp_employees
FROM stores;
```

E.
```
SELECT
    store_id,
    employees,
    FILTER (exp_employees, i -> i.years_exp > 5) AS exp_employees
FROM stores;
```

topexamcollection.com

- A. Option C
- B. Option A
- C. Option D
- D. Option B
- E. Option E

Answer: B

Explanation:
Option A is the correct answer because it uses the FILTER higher-order function correctly to filter out employees with more than 5 years of experience from the array column "employees". It applies a lambda function i -> i.years_exp > 5 that checks if the years of experience of each employee in the array is greater than 5. If this condition is met, the employee is included in the new array column "exp_employees".
The use of higher-order functions like FILTER can be referenced from Databricks documentation on Higher- Order Functions.
