ServiceNow CAD Questions - For Best Result [2025]

We give priority to the relationship between us and users of the CAD preparation materials, as a result of this we are dedicated to create a reliable and secure software system not only in payment on CAD training quiz the but also in their privacy. So we have the responsibility to delete your information and avoid the leakage of your information about purchasing CAD Study Dumps. We believe that mutual understanding is the foundation of the corporation between our customers and us.

ServiceNow Certified Application Developer-ServiceNow Sample Questions (Q194-Q199):

NEW QUESTION # 194

Which of the following is true about `g_scratchpad`?

Choose 2 answers

- A. Does not exist on the mobile platform
- B. Has constructors and methods
- C. Used to push information from the server to the client
- D. Has default properties passed by client-side scripts

Answer: B,C

NEW QUESTION # 195

When working in the Form Designer, configuring the label of a field in a child table changes the label on which table(s)?

- A. parent table
- B. all tables
- C. base table
- D. child table

Answer: D

NEW QUESTION # 196

Which of the following methods are useful in Access Control scripts?

- A. `gs.hasRole()` and `current.isNewRecord()`
- B. `g_user.hasRole()` and `current.isNewRecord()`
- C. `g_user.hasRole()` and `current.isNew()`
- D. `gs.hasRole()` and `current.isNew()`

Answer: A

Explanation:

Access Control scripts are server-side scripts that run when an Access Control rule is evaluated. They can use the `gs` and `current` objects to access the `GlideSystem` and `GlideRecord` methods, respectively. Some of the useful methods in Access Control scripts are:

`gs.hasRole()` - This method checks if the current user has a specified role. It returns true if the user has the role, and false otherwise. For example, `gs.hasRole('admin')` will return true if the user is an administrator, and false otherwise.

`current.isNewRecord()` - This method checks if the current record is a new record that has not been inserted into the database yet. It returns true if the record is new, and false otherwise. For example, `current.isNewRecord()` will return true if the record is being created, and false if the record is being updated or deleted.

The methods `g_user.hasRole()` and `current.isNew()` are not part of the server-side scripting API. They are part of the client-side scripting API, which is used in Client Scripts and UI Policies. They cannot be used in Access Control scripts.
