## New CAD Braindumps - CAD Test Practice

No matter what kind of CAD learning materials you need, you can find the best one for you. Our expert team has spent a lot of time and energy just to provide you with the best quality CAD study guide. CAD Exam Materials will definitely make you feel value for money. Your exam results will help you prove this! And countless of the candidates have been benefited from our CAD practice braindumps.

The CAD Certification is recognized globally as a valuable credential for ServiceNow professionals. It demonstrates the candidate's ability to design and develop applications that improve business processes and enhance user experience. Certified Application Developer-ServiceNow certification also shows that the candidate is committed to maintaining their knowledge and skills in ServiceNow application development, making them a valuable asset to any organization that uses the platform.

## ServiceNow Certified Application Developer-ServiceNow Sample Questions (Q176-Q181):

### NEW QUESTION # 176

The customer has asked that you change the default layout of the Task list. They would like these columns, in this order:

- \* Number
- \* Task Type
- \* Parent
- \* Short Description
- \* Assignment Group

\* Assignee

\* Updated

After navigating to the list, where would you click, to meet this requirement?

- A. Click List Context Menu > Personalize List
- **B. Right click on any column header Context Menu > Configure > List Layout**
- C. Click List Context Menu > Configure > Columns
- D. Right click List Gear icon > Configure > Columns

**Answer: B**

#### NEW QUESTION # 177

What is a Module?

- **A. The functionality within an application menu such as opening a page in the content frame or a separate tab or window**
- B. A group of menus, or pages, providing related information and functionality to end-users
- C. A web-based way of providing software to end-users
- D. A way of helping users quickly access information and services by filtering the items in the Application Navigator

**Answer: A**

Explanation:

[https://docs.servicenow.com/bundle/rome-platform-user-interface/page/administer/navigation-and-ui/task/\\_t\\_CreateAModule.html](https://docs.servicenow.com/bundle/rome-platform-user-interface/page/administer/navigation-and-ui/task/_t_CreateAModule.html)

A module is the functionality within an application menu such as opening a page in the content frame or a separate tab or window. For example, Open is a module under the Problem application menu that opens a list of problem records. Modules are the second level navigation options for applications. #### NEW QUESTION # 178

Which one of the following database operations cannot be controlled with Application Access?

- **A. Query**
- B. Delete
- C. Create
- D. Update

**Answer: A**

Explanation:

Application Access is a feature that allows you to control the access level of other application scopes to your application's data tables. You can use Application Access to control the following database operations:

Create: This operation allows the user to create new records on the table. You can enable or disable this operation by selecting or clearing the Can create option.

Delete: This operation allows the user to delete existing records on the table. You can enable or disable this operation by selecting or clearing the Can delete option.

Read: This operation allows the user to view the records on the table. You can enable or disable this operation by selecting or clearing the Can read option.

Write: This operation allows the user to modify the records on the table. You can enable or disable this operation by selecting or clearing the Can write option.

The one database operation that cannot be controlled with Application Access is Query. Query is not an operation, but a method of the GlideRecord class that is used to retrieve records from the database on the server-side. Query is not part of the Application Access rules, but it is affected by the Access Controls and the user's roles.

#### NEW QUESTION # 179

To see what scripts, reports, and other application artifacts will be in a published application:

- A. Open the artifact records individually to verify the value in the Application field
- B. Enter the name of the Application in the Global search field
- C. Examine the Application Files Related List in the application to be published
- **D. Open the list of Update Sets for the instance**

**Answer: D**

#### NEW QUESTION # 180

In a privately-scoped application, which methods are used for logging messages in server-side scripts? (Choose 2 answers)

- A. `gs.logError()`
- **B. `gs.info()`**
- **C. `gs.error()`**
- D. `gs.iog()`
- E. `gs.debug()`

**Answer: B,C**

Explanation:

Understanding Scoped Applications: Scoped applications in ServiceNow are designed to isolate and protect application-specific code and data. Server-side scripts within scoped applications can use the `gs` (GlideSystem) object for logging and debugging purposes. However, not all `gs` methods are appropriate or valid for scoped applications.

Valid Logging Methods in Scoped Applications:

`gs.info()`: This method logs informational messages to the system log. It is commonly used for general-purpose logging when developers need to track execution flow or display debug data. Example:

```
gs.info('This is an informational log message.');
```

`gs.error()`: This method logs error messages to the system log. It is used to indicate problems or issues encountered during script execution. Example:

```
gs.error('An error occurred during script execution.');
```

Incorrect Options Explained:

`gs.debug()` (Option B): This method is not valid in scoped applications. It is a legacy logging method available in the global scope but restricted in scoped applications.

`gs.iog()` (Option C): This is a typographical error and not a valid `gs` method in ServiceNow.

`gs.logError()` (Option E): This is not a recognized ServiceNow API method. To log errors, `gs.error()` is used instead.

Best Practices for Logging:

Logging should be meaningful and avoid unnecessary entries to keep logs clean and manageable.

Avoid excessive use of logging in production environments, as it can clutter the system logs and potentially degrade performance.

ServiceNow Developer Documentation on GlideSystem (`gs`).
