Perhaps the most intuitive way is to get the test 156-536 certification to obtain the corresponding qualifications. However, the 156-536 qualification examination is not so simple and requires a lot of effort to review. How to get the test certification effectively, I will introduce you to a product—the 156-536 Learning Materials that tells you that passing the 156-536 exam in a short time is not a fantasy. We have helped tens of thousands of candidates pass their 156-536 exam with 99% pass rate.

CheckPoint Check Point Certified Harmony Endpoint Specialist - R81.20 (CCES) Sample Questions (Q81-Q86):

NEW QUESTION # 81

How does Full Disk Encryption (FDE) add another layer of security?

- A. By offering media encryption
- B. By offering port protection
- C. By offering pre-boot protection
- D. By offering encryption

Answer: C

NEW QUESTION # 82

"Heartbeat" refers to what?

- A. A random server connection
- B. A client connection that happens every 60 seconds
- C. A server connection that happens every 5 minutes
- D. A periodic client connection to the server

Answer: D

NEW QUESTION # 83

What does pre-boot protection require of users?

- A. To authenticate before the computer's OS starts
- B. To regularly change passwords
- C. To authenticate before the computer will start
- D. To answer a security question after login

Answer: A

Explanation:

Pre-boot protection in Check Point Harmony Endpoint requires users to authenticate before the computer's operating system (OS) starts. This ensures that the system remains secure before the OS loads, preventing unauthorized access to encrypted data.

TheCP_R81.20_Harmony_Endpoint_Server_AdminGuide.pdf on page

223, under "Authentication before the Operating System Loads (Pre-boot)," explains:

"only authorized users are given access to information stored on desktops and laptops" by requiring authentication before the OS loads.

This pre-boot authentication process typically involves entering a password, using a smart card, or providing a token response in a pre-boot environment displayed by the Endpoint Client before the Windows or other OS boot sequence begins. This aligns with Option C ("To authenticate before the computer's OS starts").

* Option A ("To authenticate before the computer will start") is misleading; the computer powers on and starts its hardware initialization, but the OS does not load until authentication occurs. "Before the computer will start" implies the hardware itself won't power on, which is inaccurate.

* Option B ("To answer a security question after login") is incorrect because pre-boot protection occurs before the OS login, not after.

* Option D ("To regularly change passwords") relates to password policy (covered on page 264 under "Password Complexity and Security"), not the immediate requirement of pre-boot protection.
