HCLSoftware Certified Administrator- HWA 10.2 Sample Questions (Q242-Q247):

NEW QUESTION # 242

Scenario: After network outage recovery, a fault-tolerant agent relinks but jobs remain stuck. Logs show mailman running but no activity in jobman. Which queue likely contains pending job launches?

- A. Intercom.msg
- B. Mailbox.msg
- C. Serverbox.msg
- **D. Jobmanbox.msg**
- E. Courier.msg

Answer: D

Explanation:

Jobmanbox.msg holds job launch instructions from mailman to jobman; pending entries accumulate during outages.

NEW QUESTION # 243

After deploying HCL Workload Automation 10.2.3 in Kubernetes, the operations team notices that one dynamic agent fails to register, even though the wa-agent service is running. Inspection shows that agent.dynamic.gateway.hostname points to wa-agent, and agent.dynamic.gateway.port is set to 31114, but jobs never reach this agent. The hostname configured in agent.dynamic.gateway.jmFullyQualifiedHostname does not match the pod's actual hostname. How does this mismatch affect registration and workload execution?

- A. The mismatch only affects logging, but registration and job routing still work
- B. The mismatch forces the agent to use non-SSL communication but does not impact registration
- **C. The gateway cannot correctly identify and route messages to the agent, causing registration and job delivery to fail for that agent**
- D. The mismatch is irrelevant; only the port matters for communication

Answer: C

Explanation:

In the HCL Workload Automation Helm configuration, agent.dynamic.gateway.jmFullyQualifiedHostname identifies the hostname of the new dynamic agent that is connecting to the remote gateway. If this value does not match the actual agent hostname, the gateway may not correctly associate incoming connections with the corresponding registered workstation, resulting in failed registration or job routing for that agent. Both hostname and port need to be consistent for routing and identification; a mismatch affects connectivity rather than just logging or SSL behavior.

NEW QUESTION # 244

DWC DB2 z/OS configureDb.sh reports "VCAT catname not authorized" despite correct JCL volname. The STOGROUP TWSSDWC requires catalog override. Which configureDb parameter resolves VCAT authorization for DWC database creation?

- **A. Modify EQQINDWC JCL VCAT parameter pre-execution**
- B. Grant dbadminuser CATALOG ADMIN
- C. --zstogroup=TWSSDWC --zcatalognm=catname
- D. --stogroup TWSSDWC --vcat catname --volser volname in properties

Answer: A

Explanation:

EQQINDWC JCL must specify correct VCAT catname and volname before configureDb execution, as STOGROUP TWSSDWC creation requires catalog authorization at database level.

NEW QUESTION # 245

Scenario: You need to uninstall a fault-tolerant agent silently in HCL Workload Automation 10.2. Which twsinst command achieves this on UNIX?

- A. ./twsinst -remove -uname <user>
- B. ./twsinst -uninstall -quiet
- C. ./twsinst -uninst -uname <user> -silent yes
- D. ./twsinst -uninst -uname <user>
- **E. ./twsinst -uninst -uname <user> --prompt no**

Answer: E

Explanation:

The --prompt no parameter (or equivalent silent mode flags in some contexts) allows non-interactive uninstallation of agents. Combined with -uninst and -uname, it runs the uninstall script without user confirmation prompts, ideal for scripted or automated removals after ensuring prerequisites like stopped processes.

NEW QUESTION # 246

HCL HWA 10.2 DWC SSL encryption with FIPS 140-2 compliance fails: "FIPS mode: Self-test failed". IBM Semeru JDK11 configured but crypto policy unlimited missing. Required jvm.options configuration?

- A. jvm.options: -Djdk.tls.client.protocols=TLSv1.3; -Dcom.ibm.ssl.protocolProvider=IBMJSSE2FIPS
- B. server.xml: <ssl sslProtocol="TLSv1.3" fipsMode="true" enabledCipherSuites="TLS_RSA_WITH_AES_256_CBC_SHA256"/>
- C. export JAVA_OPTS="\$JAVA_OPTS -Djava.security.egd=file:/dev/./urandom -Dfips.provider=BCFIPS"
- **D. -Dcom.ibm.crypto.provider.preferred=FIPS; -Djava.security.properties=/opt/ibm/java-semeru-11/security/java.security_fips**

Answer: D

Explanation:

FIPS requires IBMJSSE2FIPS provider and unlimited jurisdiction policy. Download IBM Semeru JDK11 FIPS, configure jvm.options: -Dcom.ibm.crypto.provider.preferred=FIPS -Djava.security.properties=/opt/ibm/java-semeru-11/fips/java.security_fips where java.security_fips enables BCFKS keystoreType. Liberty starts with FIPS self-tests passed, verify ps aux |grep java shows FIPS provider active.
