## **Salesforce Certified MuleSoft Hyperautomation Developer Sample Questions (Q16-Q21):**

### **NEW QUESTION # 16**

AnyAirlines implements a credit card program that requires customer applications to go through a review process before approval. They want to develop a series of hyperautomation solutions that will integrate to process the applications and enter the customer's information into a legacy system once approved.

They want to complete the following components:

An Einstein bot that will initiate the credit card application and create a record of an existing Salesforce Custom Object A Salesforce flow that marks the credit card application as approved in Salesforce An RPA process that interacts with multiple applications and websites A simple MuleSoft Composer flow that triggers if a credit card application is approved and then invokes an RPA process Which component will likely require the most effort to complete?

- A. An Einstein bot that will initiate the credit card application and create a record of an existing Salesforce Custom Object
- B. A Salesforce flow that marks the credit card application as approved in Salesforce
- C. An RPA process that interacts with multiple applications and websites
- D. A simple MuleSoft Composer flow that triggers if a credit card application is approved and then invokes an RPA process

**Answer: C**

Explanation:

Developing an RPA process that interacts with multiple applications and websites typically requires the most effort due to several factors:

Complexity of Interaction:

RPA processes involve simulating human actions to interact with different user interfaces. This includes navigating web pages, filling out forms, and clicking buttons, which can be complex and time-consuming to script and test.

Integration Challenges:

The RPA process must handle different applications and websites, each with unique behaviors and potential for errors. Ensuring reliable and consistent interaction across these systems requires thorough testing and potentially custom handling for each system.

Maintenance and Updates:

RPA processes need to be maintained and updated as the applications or websites they interact with change.

This ongoing effort can be significant compared to other components.

### NEW QUESTION # 17

Northern Trail Outfitters publishes REST APIs to Anypoint Exchange. They write the REST APIs using RAML and share these APIs with internal and external users.

In which language or languages can a user download these APIs?

- A. RAML and OAS only
- B. RAML and Apiary only
- C. RAML only
- D. RAML, OAS, and Apiary

**Answer: A**

Explanation:

Users can download REST APIs published to Anypoint Exchange in the following languages:

RAML (RESTful API Modeling Language):

RAML is a modeling language for defining APIs, used by MuleSoft for creating REST APIs.

OAS (OpenAPI Specification):

OAS, also known as Swagger, is another widely-used standard for defining APIs.

MuleSoft supports both RAML and OAS formats, allowing users to choose between these two standards when downloading API definitions.

Anypoint Exchange API Documentation

MuleSoft RAML and OAS Documentation

### NEW QUESTION # 18

Which Connected App scope should be used to connect RPA Manager with an Anypoint Platform account?

- A. API Catalog Contributor
- B. Exchange Administrator
- C. Application Creator
- D. RPA Integrator

**Answer: D**

Explanation:

To connect RPA Manager with an Anypoint Platform account, the appropriate Connected App scope is RPA Integrator:

RPA Integrator Scope:

The RPA Integrator scope is designed to provide the necessary permissions for integrating RPA Manager with Anypoint Platform. This scope allows the connected app to interact with the RPA Manager and manage RPA processes.

Connected App Configuration:

When setting up a connected app in Anypoint Platform, select the RPA Integrator scope to ensure that the integration can access and manage the RPA processes as required.

MuleSoft RPA Documentation

Anypoint Platform Connected Apps Documentation

### NEW QUESTION # 19

AnyAirlines is creating a hyperautomation solution that will run any time a record is created in NetSuite and will update a record in Salesforce. Many records present in Salesforce need to be related to the updated record. AnyAirlines wants to automatically update each of these dependent records.

When combined, which two hyperautomation solutions should be used to automate this process without involving IT? (Choose two.)

- A. MuleSoft RPA
- B. Salesforce Flow
- C. Anypoint Platform
- D. MuleSoft Composer

**Answer: B,D**

Explanation:

To automate the process of updating related records in Salesforce when a record is created in NetSuite, combining Salesforce Flow and MuleSoft Composer is ideal:

MuleSoft Composer:

Use MuleSoft Composer to create a flow that triggers when a new record is created in NetSuite.

Configure the flow to update the corresponding record in Salesforce. This ensures that changes in NetSuite are automatically reflected in Salesforce.

Salesforce Flow:

Use Salesforce Flow to create a record-triggered flow that updates all dependent records whenever the primary Salesforce record is updated.

This flow can be set to trigger on updates to the primary record and include logic to identify and update all related records.

Combining MuleSoft Composer for integration and Salesforce Flow for in-Salesforce automation ensures that the entire process is streamlined and automated without requiring IT involvement.

### NEW QUESTION # 20

Northern Trail Outfitters must create a near real-time inventory API that can be used within its retail POS systems, across its mobile and online stores, and by its strategic B2B e-commerce partners. The API must provide accurate and up-to-date product inventory levels. The data currently resides in both SAP and NetSuite.

According to best practices, which hyperautomation tool should be used to build this solution?

- A. MuleSoft RPA
- B. Anypoint Platform
- C. MuleSoft Composer
- D. Salesforce Flow

**Answer: B**

Explanation:

To create a near real-time inventory API that integrates data from SAP and NetSuite and can be used across various platforms and partners, the Anypoint Platform is the most suitable tool:

Anypoint Platform:

Anypoint Platform provides comprehensive integration capabilities, including real-time data processing, API management, and connectivity to various systems like SAP and NetSuite.

It supports building robust, scalable APIs that can handle near real-time data synchronization, ensuring accurate and up-to-date

inventory levels across multiple channels.

Best Practices:

Using Anypoint Platform, you can design and manage APIs with fine-grained control over security, performance, and monitoring, adhering to best practices for enterprise integration.
