2026 Manufacturing-Cloud-Professional – 100% Free Reliable Test Labs | Perfect Manufacturing-Cloud-Professional Valid Exam Dumps

Why we are ahead of the other sites in the IT training industry? Because the information we provide have a wider coverage, higher quality, and the accuracy is also higher. So DumpsFree is not only the best choice for you to participate in the Salesforce Certification Manufacturing-Cloud-Professional Exam, but also the best protection for your success.

Salesforce Manufacturing Cloud Accredited Professional Exam Sample Questions (Q84-Q89):

NEW QUESTION # 84

Which three actions are available when using the mass update multiple values of a single metric of a sales agreement terms tab?

- A. Replace with
- B. Update with
- C. Increase by
- D. Multiple by
- E. Decrease by

Answer: A,C,E

Explanation:

When using the mass update multiple values of a single metric of a sales agreement terms tab, the three actions that are available are: replace with, decrease by, and increase by. These actions allow the user to update the values of a metric across multiple periods and products in a sales agreement. For example, the user can replace the forecasted quantity of a product with a new value, or increase the discount percentage of a product by a certain amount. The other options, update with and multiply by, are not valid actions for mass update. Reference: Mass Update Account Forecast Action, Update Multiple Values in Advanced Account Forecasts

NEW QUESTION # 85

In Tableau CRM for Manufacturing, which three user types can be selected to receive credit for an order in the Tableau CRM configuration wizard then calculating actuals against account manager targets?

- A. Order Owner
- B. Custom Lookup Field for a user on Account.
- C. Opportunity Owner
- D. Account Owner
- E. Other User

Answer: A,D,E

Explanation:

Explanation

The Opportunity Owner, Order Owner, and Account Owner are the user types that can be selected in the Tableau CRM configuration wizard to receive credit for an order when calculating actuals against account manager targets. These user types are linked to the opportunity, order and account respectively, and are likely to be the users responsible for the sales transaction.

NEW QUESTION # 86

When list views are selected for account forecasts, which two permissions options may be based on the list view so the Account managers can generate forecasts?

- A. All users can see the list views
- B. Share list view with group of users
- C. All users above hierarchy can see this list views
- D. Share list view with account owners

Answer: B,D

Explanation:

Explanation

When list views are selected for account forecasts, the account managers can generate forecasts based on the list view if they have one of these two permissions options: share list view with group of users or share list view with account owners. These options allow the account managers to see only the accounts that they have access to, and not all the accounts in the org. This way, they can create more accurate and relevant forecasts for their accounts. References: Create and Edit Permission Set List Views, Set Up Users and Permissions for Manufacturing Cloud

NEW QUESTION # 87

Which two statements are true, if an org hits the account product period forecast record limit?

- A. New products added to account forecasts will not be included in recalculations
- B. New products are not added when recalculating a single account forecast or recalculating all account forecasts
- C. The add products option will no longer appear on the agreement terms tab
- D. New Products cannot be added to account forecasts

Answer: B,D

Explanation:

The account product period forecast record limit is the maximum number of records that can be stored in the Account Product

Period Forecast object, which represents the quantity and revenue information of products for a particular time period of the forecast rolling period¹. The default limit is 9 million records, but it can be changed by the admin².

If the org hits the limit, new products cannot be added to account forecasts, and new products are not added when recalculating a single account forecast or recalculating all account forecasts². This means that the forecast data will not reflect the latest changes in the product portfolio and may affect the accuracy of the forecast. The add products option will still appear on the agreement terms tab, but it will not work if the limit is reached. New products added to account forecasts will be included in recalculations, as long as the limit is not exceeded. NEW QUESTION # 88

Which two options can be used to populate a custom metric so that it shows on forecast grid?

- A. Implement a record trigger flow on Account Product Forecast (APF)
- B. Implement an apex trigger on Account Product period Forecast (APPF)
- C. Used to recalculate all forecast button on the account forecast settings page
- D. Implement an record trigger on Account Product period Forecast (APPF)
- E. Implement an apex trigger on Account Product Forecast (APF)

Answer: A,B

Explanation:

You can use apex triggers to populate a custom metric on the forecast grid. A custom metric is a field that you can add to the Account Product Forecast (APF) or Account Product Period Forecast (APPF) objects to display additional information on the forecast grid. For example, you can create a custom metric to show the profit margin or the cost of goods sold for each product. To populate a custom metric, you need to write an apex trigger on the APF or APPF object that calculates the value of the custom metric based on the data in the record. You can use the standard or custom fields in the APF or APPF object as inputs for the calculation. For example, you can use the Planned Quantity, Planned Revenue, and Product Cost fields to calculate the profit margin. You can also use the fields from the related objects, such as the Account, Product, or Sales Agreement, by using the relationship queries. For example, you can use the Account Name or the Sales Agreement Status fields to filter the records for the calculation. After writing the apex trigger, you need to deploy it to your org and activate it. Then, you can add the custom metric field to the forecast grid layout and see the values populated on the grid.
