100% Exam Passing Guarantee & Money Back Assurance

BTW, DOWNLOAD part of Prep4sureGuide NCP-CN dumps from Cloud Storage: <https://drive.google.com/open?id=1oRgZXceXBatZy5SqKXFIHCpqg8WqQVQc>

It's universally acknowledged that passing the exam is a good wish for all candidates, if you choose NCP-CN study materials of us, we can ensure you that you can pass the exam just one time. We have the professional team to search for and study the latest information for exam, therefore you can get the latest information. Furthermore, the quality and accuracy for NCP-CN Exam briandumps are pretty good. We also pass guarantee and money back guarantee for you fail to pass the exam. Or if you have other exam to attend, we will replace other 2 valid exam dumps for you freely.

In addition to the NCP-CN exam materials, our company also focuses on the preparation and production of other learning materials. If you choose our NCP-CN study guide this time, I believe you will find our products unique and powerful. Then you don't have to spend extra time searching for information when you're facing other exams later, just choose us again. As long as you face problems with the exam, our company is confident to help you solve. Give our NCP-CN practice quiz a choice is to give you a chance to succeed. We are very willing to go hand in hand with you on the way to preparing for NCP-CN exam.

NCP-CN Online Training & NCP-CN Practice Test Fee

A good deal of researches has been made to figure out how to help different kinds of candidates to get NCP-CN certification. We revise and update the NCP-CN test torrent according to the changes of the syllabus and the latest developments in theory and practice. We base the NCP-CN Certification Training on the test of recent years and the industry trends through rigorous analysis.

Therefore, for your convenience, more choices are provided for you, we are pleased to suggest you to choose our NCP-CN exam question for your exam.

Nutanix Certified Professional - Cloud Native v6.10 Sample Questions (Q70-Q75):

NEW QUESTION # 70

A Cloud Engineer wishes to attach existing AKS clusters to a newly deployed NKP management cluster. What should the engineer consider specific to attaching these types of clusters to NKP?

- A. Cert-manager, which is included in NKP, is deployed by default on AKS clusters.
- B. AKS nodes do not use containerd as its container runtime. Therefore it should be deployed to each of the nodes in the AKS clusters prior to attaching them.
- **C. A separate service account should be created for them because their kubeconfig files are not usable out-of-box by NKP Kommander.**
- D. AKS does not have the kubelet installed on them. Therefore the KIB-prep process should be performed on each of the nodes in the AKS clusters prior to attaching them.

Answer: C

Explanation:

The NKPA 6.10 documentation specifies that when attaching external clusters like AKS (Azure Kubernetes Service) to an NKP management cluster using Kommander, the default kubeconfig provided by AKS is typically not directly usable because it lacks the necessary service account details and permissions for NKP to properly manage the cluster. Therefore, the recommended and required approach is to create a separate service account in AKS with the necessary permissions and generate a kubeconfig file for this service account.

Key reference:

"When importing external clusters, such as AKS, the default kubeconfig might not contain the correct permissions for NKP Kommander. A custom kubeconfig for a service account with cluster-admin privileges should be created and used to attach the cluster to NKP." Reference:

Nutanix Kubernetes Platform Administration (NKPA) 6.10 - "Attaching External Clusters" NCP-CN 6.10 Study Guide - "Managing External Clusters"

NEW QUESTION # 71

A company was using a test application called temp-shop developed in the temp-e-commerce NKP Starter cluster. Now, the cluster has just been taking up valuable resources that could be used for other projects, so the development team has decided to remove it. Before proceeding, they verified that they had the cluster configuration file temp-e-commerce.conf.

What command should the development team execute to delete the cluster with its nodes and application?

- A. `nkp delete cluster --cluster-name=temp-shop --self-managed --kubeconfig=temp-shop.conf`
- **B. `nkp delete cluster --cluster-name=temp-e-commerce --self-managed --kubeconfig=temp-e-commerce.conf`**
- C. `nkp delete cluster --all`
- D. `nkp delete cluster --application-name=temp-shop --self-managed --kubeconfig=temp-e-commerce.conf`

Answer: B

Explanation:

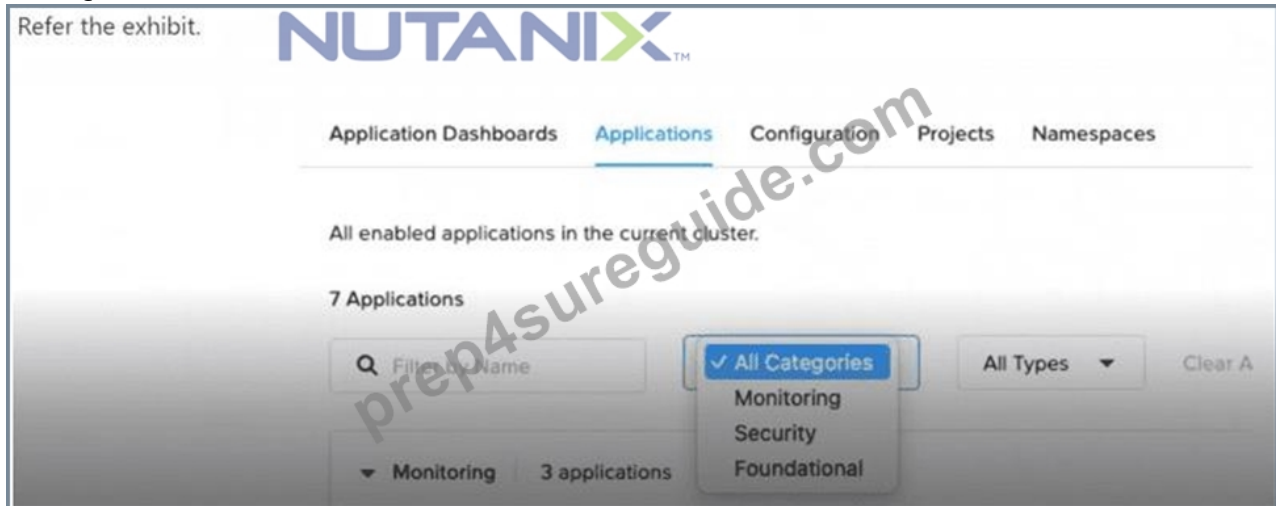

As per the NKPA 6.10 documentation, the correct approach for deleting an entire NKP-managed cluster (including nodes and deployed applications) is to use the `nkp delete cluster` command with the cluster name and `--kubeconfig` parameter. The `--self-managed` flag ensures the deletion of resources provisioned by the cluster.

Exact extract:

"Use `nkp delete cluster --cluster-name=<name> --self-managed --kubeconfig=<config>` to delete a cluster and its associated resources." Reference:

Nutanix Kubernetes Platform Administration (NKPA) 6.10 - "Cluster Deletion Workflow" NCP-CN 6.10 Study Guide - "Deleting a Managed Cluster"

NEW QUESTION # 72

After selecting the Production workspace and selecting View Details for the cluster prod-01, a Platform Engineer wanted to enable the NKP Insights application. This application is under the Observability category, but this category doesn't appear in the list. Which action should the engineer take to be able to deploy the NKP Insights application in the Kubernetes cluster for this workspace?

- A. Select Applications in the left menu, press the three-dot menu in the NKP Insights application option, and select Enable.
- B. Select Clusters in the left menu, select Applications, and select Enable in the NKP Insights three-dot menu.
- C. Select Insights in the left menu and select the Enable button.
- D. Select Clusters in the left menu, select View Details for the cluster prod-01, then in the Application Dashboard, select Enable in the NKP Insights three-dot menu.

Answer: D

NEW QUESTION # 73

A Cloud Engineer would like to configure an NKP cluster that is running in the cloud to dynamically expand and compact its resource capacity for running container workloads. This will help ensure efficient use of resources without impacting online retail transaction performance that is increasingly hitting unpredictable spikes and lulls.

Which autoscaling method does NKP use and how does it scale?

- A. Horizontal-Pod autoscaler and worker node replicas
- B. Cluster autoscaler and worker node replicas
- C. Horizontal-Pod autoscaler and worker node CPU/memory sizing
- D. Cluster autoscaler and worker node CPU/memory sizing

Answer: B

Explanation:

NKP uses the Cluster Autoscaler to scale worker node replicas up or down. This ensures that resource availability dynamically matches workload demand by adjusting the number of worker nodes. Pod-level autoscaling (Horizontal-Pod autoscaler) is also supported for pod scaling but is not responsible for node pool expansion or compaction.

Key Reference:

"NKP uses the Cluster Autoscaler to dynamically adjust worker node pool replicas in response to cluster resource demands."

Reference:

Nutanix Kubernetes Platform Administration (NKPA) 6.10 - "Cluster Autoscaler for Node Pools" NCP-CN 6.10 Study Guide - "Cluster Autoscaler vs Horizontal Pod Autoscaler"

NEW QUESTION # 74

When deploying NKP using the Nutanix provisioning method (CAPX), what are the supported OS platforms?

- A. Flatcar, Rocky Linux, and Ubuntu
- B. CentOS and Ubuntu

- C. CentOS and Rocky Linux
- **D. Rocky Linux and Ubuntu**

Answer: D

Explanation:

The NKPA course specifies the supported operating systems for NKP clusters deployed using the Nutanix provisioning method (CAPX), which leverages Cluster API for Nutanix (CAPX) to provision clusters on Nutanix AHV. The supported OS platforms for CAPX are Rocky Linux and Ubuntu, as these distributions are tested and optimized for Nutanix infrastructure and Kubernetes requirements.

Rocky Linux is a CentOS replacement adopted by Nutanix after CentOS 8's end-of-life in 2021, providing a stable, enterprise-grade OS. Ubuntu, particularly LTS versions like 20.04 or 22.04, is widely supported due to its compatibility with Kubernetes and Nutanix AHV. The Nutanix Cloud Native (NCP-CN) 6.10 Study Guide states: "When deploying NKP with the Nutanix provisioning method (CAPX), the supported OS platforms are Rocky Linux and Ubuntu, ensuring compatibility with Nutanix AHV and Kubernetes." These OS images are typically prepared using NKP Image Builder (NIB) to include necessary components like kubeadm and containerd.

Incorrect Options:

- * A. CentOS and Rocky Linux: CentOS 8 is no longer supported post-2021, and Nutanix has shifted to Rocky Linux.
- * C. Flatcar, Rocky Linux, and Ubuntu: Flatcar Container Linux is not a supported OS for CAPX in NKP deployments.
- * D. CentOS and Ubuntu: CentOS is not supported, as noted above.
