

JN0-105 Authorized Pdf | New JN0-105 Exam Vce

DOWNLOAD the newest TorrentVCE JN0-105 PDF dumps from Cloud Storage for free: <https://drive.google.com/open?id=1GC0YBAj8oTte3uEhFWHnEW3gZO-3O4wr>

In this social-cultural environment, the JN0-105 certificates mean a lot especially for exam candidates like you. To some extent, these JN0-105 certificates may determine your future. With respect to your worries about the practice exam, we recommend our JN0-105 Preparation materials which have a strong bearing on the outcomes dramatically. For a better understanding of their features, please follow our website and try on them.

Juniper JN0-105 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• User Interfaces: This topic delves into identifying the concepts, operation, or functionality of the Junos user interface.
Topic 2	<ul style="list-style-type: none">• Routing Policy and Firewall Filters: The topic of Routing Policy and Firewall Filters covers routing policy and firewall filters on Junos devices. Furthermore, the topic also deals with routing policies and firewall filters on a Junos device.
Topic 3	<ul style="list-style-type: none">• Networking Fundamentals: The topic networking fundamentals covers identifying the concepts and functionality of different fundamental elements of networking.

Topic 4	<ul style="list-style-type: none"> • Routing Fundamentals: This topic discusses pointing out basic routing concepts or functionality for Junos devices. Moreover, the topic also describes configuring or monitoring basic routing elements for a Junos device.

Latest 100% Free JN0-105 – 100% Free Authorized Pdf | New JN0-105 Exam Vce

As a responsible company, we don't ignore customers after the deal, but will keep an eye on your exam situation. Although we can assure you the passing rate of our JN0-105 study materials nearly 100 %, we can also offer you a full refund if you still have concerns. If you try our JN0-105 Study Materials but fail in the final exam, we can refund the fees in full only if you provide us with a transcript or other proof that you failed the exam.

Juniper Junos, Associate (JNCIA-Junos) Sample Questions (Q108-Q113):

NEW QUESTION # 108

Exhibit.

Referring to the exhibit, which routing configuration is required for these two users to access the remote server?

- A. Users and the server require a default gateway.
- B. Trunk ports must be enabled on the switch.
- C. Users must connect directly to the router.
- D. A routing protocol must be enabled on the router.

Answer: A

Explanation:

In a typical network configuration, users and servers require a default gateway to communicate with devices on different networks or subnets. The default gateway is usually the router's interface on the same network, which routes the traffic to other networks. This is essential for the two users to access the remote server if the server is on a different subnet, which is indicated by the different network addresses.

NEW QUESTION # 109

Click the Exhibit button.

Referring to the exhibit, what should be configured on R1 to advertise a default static route into OSPF?

- A. a management interface
- B. a routing policy
- C. a loopback interface
- D. a firewall filter

Answer: B

Explanation:

To advertise a default static route into OSPF on router R1, a routing policy should be configured. This policy would typically include a statement to match the default route (0.0.0.0/0) and then apply an action to set the route as an OSPF external type, which would then be redistributed into the OSPF domain. The routing policy is a set of conditions and actions that determine how routes are imported into or exported from the routing table and how routes are shared between routing instances or routing protocols. After defining the policy, it must be applied to OSPF under the export section of the OSPF configuration on R1. This process will allow R1 to announce the default route to other OSPF routers in the network, which then can use it as a gateway of last resort to reach the Internet or other networks not explicitly known to the OSPF domain.

NEW QUESTION # 110

You are logged in to a Junos OS device with SSH and issued the show protocols | compare command in the configuration, but no output is shown.

Which statement is correct in this scenario?

- A. There are no changes to the candidate configuration.
- B. You must commit the configuration before any output will be shown.
- C. Someone accidentally deleted the active configuration.
- D. The command only works for interface configuration differences.

Answer: A

Explanation:

The show | compare command in Junos OS is used to display the differences between the candidate configuration and the active configuration. If no output is shown when you issue this command, it means that there are no changes between the candidate configuration and the active configuration. This indicates that the candidate configuration is identical to the active configuration, and thus no differences are displayed.

Reference:

"The show | compare command displays the differences between the candidate configuration and the active configuration. If there are no changes, no output is displayed."

NEW QUESTION # 111

Which two statements are true about the Junos OS? (Choose two.)

- A. Exception traffic is never sent to the control plane.
- B. Routing tables are stored in the forwarding plane.
- C. Exception traffic is sent to the control plane.
- D. Routing tables are stored in the control plane.

Answer: C,D

Explanation:

In Junos OS, as with many network operating systems, the control plane is responsible for processes that determine how to route traffic. This includes maintaining routing tables, which store information about network paths and protocols. Therefore, routing tables are indeed stored in the control plane.

Exception traffic refers to packets that cannot be processed by the normal fast-path processing of the Packet Forwarding Engine (PFE) in the forwarding plane, and thus are sent to the control plane for further processing. This might include packets destined for the router itself, packets that need to be fragmented, or packets that match certain firewall filter criteria, among other reasons.

Routing tables are not stored in the forwarding plane. However, the forwarding plane contains the forwarding table (sometimes referred to as the forwarding information base or FIB), which is a distilled version of the routing table optimized for fast packet forwarding. The forwarding plane uses this information to perform the actual transfer of packets across the network device interfaces.

NEW QUESTION # 112

You are asked to configure your device running Junos OS to automatically archive your configuration upon commit. In this scenario, which two methods are supported by the Junos OS? (Choose two)

- A. RCP
- B. FTP
- C. HTTP
- D. SCP

Answer: A,D

Explanation:

Junos OS supports multiple methods for automatically archiving configurations upon commit. Two of the supported methods are SCP (Secure Copy Protocol) and RCP (Remote Copy Protocol). These methods can be configured to save the configuration files to a remote server automatically whenever a commit is made.

Reference: Juniper Networks Documentation on Configuration Archival

"You can configure Junos OS to automatically archive the configuration using protocols such as SCP and RCP upon commit."
