

Hohe Qualität von 800-150 Prüfung und Antworten

2026 Die neuesten Zertpruefung 800-150 PDF-Versionen Prüfungsfragen und 800-150 Fragen und Antworten sind kostenlos verfügbar: <https://drive.google.com/open?id=106EkJ3thQrvaFChyvBs6ssRJ7ldOA1-F>

Per Zertpruefung können Sie die neuesten Fragen und Antworten zur Cisco 800-150 Zertifizierungsprüfung bekommen. Bitte kaufen Sie die Produkte schnell, so dass Sie die Prüfung zum ersten mal bestehen können. Zur Zeit besitzt nur PassTest die kürzlich aktualisierten Cisco 800-150 Prüfungsfragen und Antworten .

Die Ausbildungsmaterialien zur Cisco 800-150 Zertifizierungsprüfung aus Zertpruefung enthalten Testfragen und Antworten. Diese Materialien sind von unserer Berufsgruppe aus erfahrenen IT-Experten untersucht und erforscht, deren Autorität zweifellos ist. Sie können auf unserer Webseite einige kostenlosen Testaufgaben und Antworten als Probe herunterladen. Nachdem Sie unsere Ausbildungsmaterialien zur Cisco 800-150 Zertifizierungsprüfung gekauft haben, werden wir Ihnen einjähriger Aktualisierung kostenlos anbieten.

800-150 zu bestehen mit allseitigen Garantien

Heute, wo das Internet schnell entwickelt, ist es ein übliches Phänomen, Online-Ausbildung zu wählen. Zertpruefung ist eine der vielen Online-Ausbildungswebsites. Zertpruefung hat langjährige Erfahrungen und kann den Kandidaten die Lemmaterialien von guter Qualität zur Cisco 800-150 Zertifizierungsprüfung bieten, um ihre Bedürfnisse abzudecken.

Cisco 800-150 Prüfungsplan:

Thema	Einzelheiten
Thema 1	• Cisco Infrastructure and Collaboration Infrastructure: This section of the exam measures the skills of a Collaboration Engineer and focuses on Cisco infrastructure devices, endpoints, and collaboration technologies. It introduces network devices, collaboration endpoints like IP phones and video systems, and explains on-premises collaboration deployments using tools like Cisco Unified Communications Manager. It also covers how video systems integrate into collaboration environments and highlights Cisco's cloud services for enterprise communication, including Webex Meetings, Webex Teams, and hosted collaboration solutions.
Thema 2	• Cisco UCS and Data Center Architecture: This section of the exam measures the skills of a Data Center Engineer and introduces Cisco's UCS and data center solutions. It explains the devices found in a data center, including switches, UCS servers, and director switches, and describes different server deployment models. Students will also learn about virtualization components like virtual machines, hypervisors, cloud computing concepts, and deployment models. The section covers how Cisco UCS devices fit into campus networks, edge locations, and data centers, and explains the key components and connections used in UCS architecture.
Thema 3	• Cisco Software: This section of the exam measures the skills of a Network Engineer and discusses Cisco's software systems and licensing. It explains the difference between IOS install and bundle modes and gives an overview of different licensing models. Students learn how to manage Cisco software images, including backing up, transferring, and installing images via FTP, TFTP, or USB. It also covers how to handle configuration files to keep devices running properly and ensure smooth upgrades or replacements.
Thema 4	• Cisco Hardware Replacement: This section of the exam measures the skills of a Technical Support Engineer and teaches how to safely and correctly replace Cisco hardware. It explains safety procedures such as creating safe work zones and handling electrostatic discharge. Students learn the step-by-step processes to replace a wide range of Cisco devices, from switches and routers to firewalls, UCS servers, and collaboration endpoints. It also covers configuring Cisco NX-OS software, including understanding operating modes, boot procedures, and password recovery, and introduces Cisco collaboration endpoint solutions like IP phones and video systems.
Thema 5	• Common Service Tasks and Tools: This section of the exam measures the skills of a Technical Support Engineer and focuses on tasks commonly needed to manage Cisco devices. It explains how devices boot up, introduces common Cisco IOS commands, and identifies tools for file management. It shows how to confirm physical connections, remotely access devices, and connect to the console port. It also covers how to capture the status of a device, recover passwords, and replace devices by using proper tools. Students are also taught how to find serial numbers on Cisco equipment to assist with support and maintenance activities.

Cisco Supporting Cisco Devices for Field Technicians 800-150 Prüfungsfragen mit Lösungen (Q35-Q40):

35. Frage

What is the primary purpose of changing the configuration register when performing password recovery?

- A. To erase the entire configuration
- B. To enable advanced debugging features
- C. To ignore the startup configuration
- D. To unlock all user accounts

Antwort: C

Begründung:

During password recovery on Cisco devices, the configuration register is modified to instruct the device to bypass the startup configuration stored in NVRAM. This allows administrators to access the device without being prompted for existing passwords. The standard procedure involves changing the configuration register value to 0x2142, which tells the device to ignore the startup

configuration during the next boot. Once access is gained, the administrator can reset passwords and then restore the original configuration by resetting the configuration register to its default value, typically 0x2102.

36. Frage

Which two settings are standard Cisco console connections when configuring a terminal emulator to connect to the console port of a Cisco switch? (Choose two.)

- A. Stop bits: 2
- B. Parity: Even
- C. Flow control: Hardware
- D. Data bits: 8
- E. Speed (baud rate): 9600

Antwort: D,E

Begründung:

When configuring a terminal emulator (such as PuTTY, Tera Term, or HyperTerminal) to connect to the console port of a Cisco switch, the standard settings are as follows:

* Speed (baud rate): 9600 This is the default transmission speed for Cisco console ports, ensuring compatibility across various devices.

* Data bits: 8 This setting specifies that each character transmitted consists of 8 data bits, which is standard for most serial communications.

* Parity: None No parity bit is used, meaning there is no additional error-checking bit appended to each character.

* Stop bits: 1 One stop bit indicates the end of a character transmission.

* Flow control: None No flow control is employed, allowing continuous data transmission without hardware or software-based pausing.

Therefore, options C (Speed: 9600) and D (Data bits: 8) are correct. Options A (Stop bits: 2), B (Flow control: Hardware), and E (Parity: Even) deviate from the standard settings and may result in communication issues if configured.

37. Frage

Which common CLI command is used to install Cisco NX-OS Software?

- A. boot system
- B. install kickstart
- C. install all
- D. copy tftp: running-config

Antwort: C

Begründung:

The `install all` command is the standard method used to install or upgrade Cisco NX-OS software on Nexus switches. This command streamlines the installation process by automating tasks such as verifying the software image, checking for compatibility, and managing the installation of optional packages or SMUs (Software Maintenance Upgrades). It ensures a comprehensive and efficient upgrade process, minimizing the potential for errors.

Cisco In contrast:

* `copy tftp: running-config` is used to copy configuration files, not software images.

* `install kickstart` is an outdated command from earlier NX-OS versions.

* `boot system` sets the boot variable but does not handle the full installation process.

38. Frage

How must the power to a system with dual power supplies on a Cisco Nexus switch be connected?

- A. Connect each power supply to a separate power source.
- B. Connect both power supplies to a power distribution unit with built-in redundancy.
- C. Connect the primary power supply to the main source and the secondary to a backup generator.
- D. Connect both power supplies to a single power source.

Antwort: A

Begründung:

In a Cisco Nexus switch with dual power supplies, the recommended method is to connect each power supply to a separate power source (Option C). This ensures power redundancy and fault tolerance.

If one power source fails (e.g., due to a power outage or circuit failure), the switch can continue operating uninterrupted using the second power source. Connecting both to a single source (Option D) defeats the purpose of redundancy.

39. Frage

Which two actions ensure a smooth transition to the new hardware when replacing a Cisco UCS C-Series Rack-Mount Server? (Choose two.)

- A. Decommission the server if it is integrated in a Cisco UCS domain.
- B. Back up the server configuration using Cisco Integrated Management Controller.
- C. Reconfigure the DHCP server to assign a new IP address to the replacement server.
- D. Temporarily disable all firewalls during the replacement process.
- E. Update the firmware on the fabric interconnects.

Antwort: A,B

Begründung:

To ensure a smooth replacement of a Cisco UCS C-Series Rack-Mount Server, two critical actions are:

Back up the server configuration using the Cisco Integrated Management Controller (CIMC): This preserves all configuration data such as BIOS settings, RAID setup, and network configuration. After replacing the hardware, this configuration can be restored to minimize setup time.

Decommission the server if it is integrated in a Cisco UCS domain: Before physically replacing the server, decommissioning it ensures the UCS Manager properly releases it from the inventory, preventing configuration conflicts or orphaned profiles.

Other options, like reconfiguring DHCP or disabling firewalls, are not required procedures for a UCS C-Series hardware swap.

40. Frage

.....

Geben Sie sich alle erdenkliche Mühe, um die richtige Prüfungsmaterialien für die Cisco 800-150 Zertifizierungsprüfung in dieser komplizierten und wechselhaften Informationsepoche zu finden? Wir freuen uns darüber, dass Sie Zertpruefung, dieser echte und zuversichtliche Ausbildungsmaterialien zur Cisco 800-150 Zertifizierungsprüfung schließlich finden. Sie werden Ihnen helfen, das schätze Cisco 800-150 Prüfungszertifikat von zu erhalten.
