

# Juniper Excellent Test JN0-650 Dump–Pass JN0-650 First Attempt

www.NITExam.com  
This Juniper JN0-650 Enterprise Routing and Switching Professional Study Guide provides in-depth coverage of advanced routing protocols, enterprise switching concepts, and routing policy implementation in Junos OS. It includes practical configuration examples, troubleshooting strategies, and exam-style practice questions to prepare candidates for the 90-minute JNCIP-ENT certification exam. Ideal for network engineers advancing their professional Juniper certification.

What's more, part of that BraindumpsVCE JN0-650 dumps now are free: [https://drive.google.com/open?id=143hpn09cEFmQhIrXSo\\_Y1H6pe2QyR6E\\_](https://drive.google.com/open?id=143hpn09cEFmQhIrXSo_Y1H6pe2QyR6E_)

If you are overwhelmed with the job at hand, and struggle to figure out how to prioritize your efforts, these would be the basic problem of low efficiency and production. You will never doubt anymore with our JN0-650 test prep. With our JN0-650 exam questions, you will not only get the JN0-650 Certification quickly, but also you can get the best and helpful knowledge. And that when you make a payment for our JN0-650 quiz torrent, you will possess this product in 5-10 minutes and enjoy the pleasure and satisfaction of your study time.

## Juniper JN0-650 Exam Overview:

|                                     |                                                                                            |

## Take your Preparation to the Next Level with Actual JN0-650 Questions of BraindumpsVCE

Our product boosts varied functions to be convenient for you to master the JN0-650 training materials and get a good preparation for the exam and they include the self-learning function, the self-assessment function, the function to stimulate the exam and the timing function. We provide 24-hours online on JN0-650 Guide prep customer service and the long-distance professional personnel assistance to for the client. If clients have any problems about our JN0-650 study materials they can contact our customer service at any time.

### Juniper JN0-650 Exam Syllabus Topics:

| Topic   | Details                                                                                                                                                                                                                                                                                   |
|---------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Topic 1 | <ul style="list-style-type: none"> <li>Ethernet Switching and Spanning Tree: This section covers advanced Layer 2 switching including filter-based VLANs, private VLANs, MVRP, Layer 2 tunneling via Q-in-Q and L2PT, plus MSTP and VSTP protocols.</li> </ul>                            |
| Topic 2 | <ul style="list-style-type: none"> <li>EVPN: This section addresses Ethernet VPN technology for Layer 2 over Layer 3 connectivity, covering EVPN route types, VXLAN encapsulation, and multi-homing configurations.</li> </ul>                                                            |
| Topic 3 | <ul style="list-style-type: none"> <li>IP Multicast: This domain addresses one-to-many communication using multicast routing, covering addressing, ASM vs SSM models, RPF, IGMP</li> <li>snooping, PIM sparse-mode, rendezvous points, Anycast RP, MSDP, and routing policies.</li> </ul> |
| Topic 4 | <ul style="list-style-type: none"> <li>IP Telephony Features: This section focuses on features supporting VoIP deployments including Power over Ethernet, LLDP</li> <li>LLDP-MED protocols, and voice VLAN implementation.</li> </ul>                                                     |
| Topic 5 | <ul style="list-style-type: none"> <li>Layer 2 Authentication and Access Control: This domain examines network access control mechanisms including 802.1x, MAC RADIUS, captive portal, server fail fallback, guest VLANs, and multi-method authentication considerations.</li> </ul>      |

## Juniper Enterprise Routing and Switching, Professional (JNCIP-ENT) Sample Questions (Q114-Q119):

### NEW QUESTION # 114

Which multicast protocol is responsible for creating a shortest path tree for each source?

- A. IGMP
- B. MSDP
- C. PIM Dense Mode
- D. PIM Sparse Mode

**Answer: D**

### NEW QUESTION # 115

Select the correct statements regarding the route selection process in IS-IS. (Choose two)

- A. IS-IS prefers routes with the highest metric.

- B. IS-IS prefers routes with the lowest metric.
- C. Routes within the same area are preferred over inter-area routes.
- D. IS-IS uses a random selection process when multiple paths have the same metric.

Answer: B,C

#### NEW QUESTION # 116

Exhibit.

```
[edit]
user@RouteReflector# show protocols
bgp {
  group int-group {
    type internal;
    local-address 172.16.10.1;
    export NHS;
    cluster 172.16.10.1;
    neighbor 172.16.10.3;
    neighbor 172.16.10.2;
  }
}
[edit]
user@RouteReflector# show policy-options
policy-statement NHS {
  term 10 {
    from protocol bgp;
    then {
      next-hop self;
    }
  }
}
```

You have determined that traffic in your network is being routed through your route reflector instead of using the optimal path. Referring to the exhibit, what are two configuration changes on the route reflector that would solve the problem? (Choose two.)

- A. set protocols bgp group int-group import NHS
- B. delete protocols bgp group int-group export NHS
- C. set policy-options policy-statement NHS term 10 from route-type external
- D. set policy-options policy-statement NHS term 10 from route-type internal

Answer: B,D

Explanation:

The exhibit shows a BGP Route Reflector (RR) configuration where an export policy named NHS (Next-Hop Self) is applied to the internal BGP group int-group. The policy NHS sets the next-hop self attribute for BGP routes.

The Problem (Traffic Tromboning): In a standard BGP Route Reflector design, the RR should reflect routes without modifying the BGP next-hop attribute. By applying a next-hop self policy on the export to clients, the RR tells all its clients that it is the exit point for those routes. Consequently, all data plane traffic is sent to the RR first before being forwarded to the actual destination, rather than following the optimal direct path between clients. This is known as "traffic tromboning" or suboptimal routing.

The Solution (Option C): The most direct way to fix this is to delete the export policy that is forcing the next-hop to be the RR. By deleting protocols bgp group int-group export NHS, the RR will resume standard behavior and reflect the original next-hop received from the route source, allowing clients to route traffic directly to the correct destination.

The Refined Solution (Option D): If you must keep the NHS policy (perhaps for routes learned from external peers), you should ensure it only applies to those specific routes. By adding from route-type internal to the policy term and then potentially changing the logic (or simply narrowing the scope), you can prevent the RR from incorrectly applying next-hop self to internal routes that it is merely reflecting. In the context of this specific problem, Option D combined with a change in the policy's action or scope helps ensure reflected internal routes maintain their original, optimal next-hops.

Option A is incorrect because setting next-hop self for external routes is common practice, but it doesn't solve the problem of internal reflected routes being diverted to the RR.

Option B is incorrect because applying this as an import policy would change how the RR itself sees the routes, but it wouldn't fix the attributes being sent out to the clients in the reflection process.

### NEW QUESTION # 117

Which multicast routing protocol uses a shared tree only, without the option for a shortest-path tree?

- A. PIM-Dense Mode
- B. PIM-Source Specific Multicast
- C. PIM-Sparse Mode
- **D. Bidirectional PIM**

Answer: D

### NEW QUESTION # 118

The connection between DC1 and DC2 is routed as shown in the exhibit.

In this scenario, which statement is correct?

- A. L3VPN must be enabled to advertise reachability.
- B. Type 2 and Type 5 routes will be exchanged between DC1 and DC2.
- C. An IP prefix route provides encoding for intra-subnet forwarding.
- **D. The border devices must be able to perform Layer 3 routing and provide IRB functionality.**

**Answer: D**
