CAS-004 Flexible Learning Mode & CAS-004 Dumps Free

The CompTIA Advanced Security Practitioner (CASP+) Exam (CAS-004) mock exams will allow you to prepare for the CAS-004 exam in a smarter and faster way. You can improve your understanding of the CAS-004 exam objectives and concepts with the easy-to-understand and actual CAS-004 Exam Questions offered by PDFTorrent. PDFTorrent makes the CAS-004 Practice

Questions affordable for everyone and allows you to find all the information you need to polish your skills to be completely ready to clear the CAS-004 exam on the first attempt.

CompTIA Advanced Security Practitioner (CASP+) Exam Sample Questions (Q27-Q32):

NEW QUESTION # 27
Company A acquired Company . During an audit, a security engineer found Company B's environment was inadequately patched. In response, Company A placed a firewall between the two environments until Company B's infrastructure could be integrated into Company A's security program.
Which of the following risk-handling techniques was used?

- A. Accept
- B. Mitigate
- C. Transfer
- D. Avoid

Answer: B

NEW QUESTION # 28
A security engineer estimates the company's popular web application experiences 100 attempted breaches per day. In the past four years, the company's data has been breached two times.
Which of the following should the engineer report as the ARO for successful breaches?

- A. 36,500
- B. 0.5
- C. 0
- D. 1

Answer: B

Explanation:
Reference: https://blog.netwrix.com/2020/07/24/annual-loss-expectancy-and-quantitative-risk-analysis/ The ARO (annualized rate of occurrence) for successful breaches is the number of times an event is expected to occur in a year. To calculate the ARO for successful breaches, the engineer can divide the number of breaches by the number of years. In this case, the company's data has been breached two times in four years, so the ARO is 2 / 4 = 0.5. The other options are incorrect calculations. Verified References: https://www.

NEW QUESTION # 29
A company plans to build an entirely remote workforce that utilizes a cloud-based infrastructure.
The Chief Information Security Officer asks the security engineer to design connectivity to meet the following requirements:
- Only users with corporate-owned devices can directly access servers
hosted by the cloud provider.
- The company can control what SaaS applications each individual user
can access.
- User browser activity can be monitored.
Which of the following solutions would BEST meet these requirements?

- A. IAM gateway, MDM, and reverse proxy
- B. VPN, CASB, and secure web gateway
- C. API gateway, UEM, and forward proxy
- D. SSL tunnel, DLP, and host-based firewall

Answer: B

Explanation:
A VPN would ensure that only corporate-owned devices can directly access the cloud-based infrastructure.
A Cloud Access Security Broker (CASB) can control the access of individual users to SaaS applications, fulfilling the second

requirement.
A secure web gateway can monitor user browser activity, satisfying the final requirement. The secure web gateway acts as a security layer between the users and the internet, allowing for the monitoring and controlling of web traffic and ensuring that only authorized web resources are accessible.

NEW QUESTION # 30
While investigating a security event, an analyst finds evidence that a user opened an email attachment from an unknown source. Shortly after the user opened the attachment, a group of servers experienced a large amount of network and resource activity. Upon investigating the servers, the analyst discovers the servers were encrypted by ransomware that is demanding payment within 48 hours or all data will be destroyed. The company has no response plans for ransomware.
Which of the following is the NEXT step the analyst should take after reporting the incident to the management team?

- A. Pay the ransom within 48 hours.
- B. Notify law enforcement.
- C. Isolate the servers to prevent the spread.
- D. Request that the affected servers be restored immediately.

Answer: C

Explanation:
Isolating the servers is the best immediate action to take after reporting the incident to the management team, as it can limit the damage and contain the ransomware infection. Paying the ransom is not advisable, as it does not guarantee the recovery of the data and may encourage further attacks. Notifying law enforcement is a possible step, but not the next one after reporting. Requesting that the affected servers be restored immediately may not be feasible or effective, as it depends on the availability and integrity of backups, and it does not address the root cause of the attack. NEW QUESTION # 31
A security engineer is working to secure an organization's VMs. While reviewing the workflow for creating VMs on demand, the engineer raises a concern about the integrity of the secure boot process of the VM guest.
Which of the following would BEST address this concern?

- A. Protect the memory allocation of a Type 1 hypervisor.
- B. Configure file integrity monitoring of the guest OS.
- C. Enable the vTPM on a Type 2 hypervisor.
- D. Only deploy servers that are based on a hardened image.

Answer: C
