Category-7A-General-and-Household-Pest-Control Latest Examprep

To pass the OCPE Category-7A-General-and-Household-Pest-Control certification exam, you need to master complicated subjects related to Pesticide Applicator Category 7A General and Household Pest Control Exam. ExamsTorrent verified OCPE Category-7A-General-and-Household-Pest-Control pdf questions can help you prepare for this exam by covering every topic in the exam and giving you the opportunity to practice for the actual exam. Download ExamsTorrent OCPE Category-7A-General-and-Household-Pest-Control PDF Questions today and get ready to demonstrate your expertise in solving complex OCPE real-life problems.

OCPE Pesticide Applicator Category 7A General and Household Pest Control Exam Sample Questions (Q38-Q43):

NEW QUESTION # 38

Never get rid of rinsate or unused pesticide material:

- A. On the soil
- B. Into a drain or sewer
- C. Both of the answers are applicable

Answer: C

Explanation:

Disposing of rinsate (rinse water from cleaning equipment) or unused pesticide material improperly can lead to environmental contamination. NJDEP regulations (N.J.A.C. 7:30-9.12) and the General Pest Management: Guide for Commercial Applicators - Category 7A(Chapter 3: Pesticide Safety) prohibit disposal on the soil (which can contaminate groundwater) or into a drain or sewer (which can pollute water systems). Both methods are illegal and environmentally harmful, making Option C correct. Rinsate should be applied to a labeled site or disposed of at a designated facility.

NEW QUESTION # 39

The suggested re-entry interval for applications of TEMPRID is:

- A. Wait until treated area is dry
- B. 12 hours
- C. 24 hours

Answer: A

Explanation:

The TEMPRID SC label specifies that the re-entry interval for treated areas is to wait until the treated area is dry, typically 1-2 hours under normal conditions, unless otherwise specified for specific uses.

This ensures that the pesticide has settled and there is no risk of exposure to wet residues. The General Pest Management: Guide for Commercial Applicators - Category 7A(Chapter 5: Pesticide Application) aligns with this guidance for most indoor applications. Option A (24 hours) and Option C (12 hours) are incorrect, as they exceed the label's re-entry requirement unless specified for a specific situation (e.g., in schools, where additional restrictions may apply).

NEW QUESTION # 40

Bedbugs go through:

- A. Gradual metamorphosis (nymphs similar to adult stage)
- B. Four distinct stages of development (egg, larva, pupa, and adult)
- C. Just two stages (egg and adult)

Answer: A

Explanation:

Bedbugs undergo gradual metamorphosis, also known as incomplete metamorphosis, which includes three stages: egg, nymph, and adult. Nymphs resemble smaller versions of adults and go through several molts before reaching maturity. The General Pest

Management: Guide for Commercial Applicators - Category 7A(Chapter 7: Bedbugs) confirms this life cycle. Option A (four stages: egg, larva, pupa, adult) describes complete metamorphosis, typical of insects like beetles, not bedbugs. Option C (two stages) is incorrect, as nymph stages are a critical part of bedbug development.

NEW QUESTION # 41

When used in integrated bed bug elimination programs, TEMPRID:

- A. Applications cannot be made prior to heat treatments
- B. Efficacy is affected by heat treatments
- C. Efficacy is not affected by heat treatment; therefore TEMPRID can be applied before heat treatments

Answer: C

Explanation:

TEMPRID SC's efficacy is not affected by heat treatments, as its active ingredients (imidacloprid and beta-cyfluthrin) remain stable under high temperatures used in bedbug heat treatments. The TEMPRID SC label and the General Pest Management: Guide for Commercial Applicators - Category

7A(Chapter 7: Bedbugs) confirm that TEMPRID can be applied before heat treatments as part of an integrated approach, as heat drives bedbugs out of hiding, increasing their contact with the pesticide.

Option A (cannot be made prior to heat treatments) is incorrect, as the label allows this. Option B (efficacy affected by heat) is incorrect, as TEMPRID's performance is not diminished by heat.

NEW QUESTION # 42

Chemical resistant gloves should be worn:

- A. When mixing or applying a pesticide
- B. Only when mixing a pesticide
- C. Only when applying a pesticide

Answer: A

Explanation:

Chemical-resistant gloves are a critical piece of personal protective equipment (PPE) for pesticide applicators. The General Pest Management: Guide for Commercial Applicators - Category 7A(Chapter

3: Pesticide Safety) and NJDEP guidelines require gloves to be worn when mixing or applying a pesticide, as both activities pose a risk of dermal exposure, the most common cause of pesticide poisoning (see Question 18). Option A (only when applying) ignores the risk during mixing, and Option C (only when mixing) ignores the risk during application.

NEW QUESTION # 43

.....

As old saying goes, no pains, no gains. You must depend on yourself to acquire what you want. No one can substitute you with the process. Of course, life has shortcut, which can ensure you have a bright future. Our Category-7A-General-and-Household-Pest-Control training quiz will become your new hope.
