## Category-7A-General-and-Household-Pest-Control Reliable Exam Question

As you know, many exam and tests depend on the skills rather than knowledge solely. Our Category-7A-General-and-Household-Pest-Control exam materials are time-tested materials for your information. There are free demos of our Category-7A-General-and-Household-Pest-Control training guide for your reference with brief catalogue and outlines in them. For a Category-7A-General-and-Household-Pest-Control study engine develop to full maturity, it is rewarding and hard. And we have engaged for more than ten years and successfully make every detail of our Category-7A-General-and-Household-Pest-Control practice braindumps to be perfect.

### OCPE Pesticide Applicator Category 7A General and Household Pest Control Exam Sample Questions (Q47-Q52):

#### NEW QUESTION # 47

The most frequently reported vector-borne illness is:

- A. Lyme Disease
- B. Tick Paralysis
- C. Rocky Mountain Spotted Fever

**Answer: A**

Explanation:

Lyme Disease is the most frequently reported vector-borne illness in the U.S., including New Jersey, transmitted by the blacklegged tick. The General Pest Management: Guide for Commercial Applicators

- Category 7A(Chapter 7: Ticks) highlights its prevalence, with thousands of cases reported annually.

Option A (Rocky Mountain Spotted Fever) is less common. Option B (Tick Paralysis) is rare and not a disease but a condition caused by tick bites.

#### NEW QUESTION # 48

The recertification requirements for a commercial pesticide applicator are:

- A. 8 credits core, 24 credits in a category within 3 years
- B. 16 credits per category and 8 credits core within 5 years
- C. 80 dollars per year

**Answer: B**

Explanation:

NJDEP requires commercial pesticide applicators to recertify every five years. For Category 7A applicators, this involves earning 8 credits in Core (general pesticide safety and regulations) and 16 credits in each category (e.g., 7A) within that five-year period

(N.J.A.C. 7:30-6.4). Option A is incorrect because the category credits are 16, not 24, and the timeframe is five years, not three.

Option B (80 dollars per year) is irrelevant to recertification credits, though there may be fees for licensing.

#### NEW QUESTION # 49

Chemical resistant gloves should be worn:

- A. Only when applying a pesticide
- B. Only when mixing a pesticide
- C. When mixing or applying a pesticide

**Answer: C**

Explanation:

Chemical-resistant gloves are a critical piece of personal protective equipment (PPE) for pesticide applicators. The General Pest Management: Guide for Commercial Applicators - Category 7A(Chapter

3: Pesticide Safety) and NJDEP guidelines require gloves to be worn when mixing or applying a pesticide, as both activities pose a risk of dermal exposure, the most common cause of pesticide poisoning (see Question 18). Option A (only when applying) ignores the risk during mixing, and Option C (only when mixing) ignores the risk during application.

### NEW QUESTION # 50

Lice infestations are best treated by a:

- A. Residual pesticide treatment
- **B. Doctor or public health official**
- C. Heat treatment

**Answer: B**

Explanation:

Lice infestations (e.g., head lice) are a public health concern and are best treated by a doctor or public health official using FDA-approved pediculicides or non-chemical methods like combing. The General Pest Management: Guide for Commercial Applicators - Category 7A (Chapter 7: Lice) notes that lice treatments are typically medical, not structural pest control, and fall outside the scope of Category 7A applicators. Option B (residual pesticide treatment) is not appropriate for lice on humans. Option C (heat treatment) may be used for items like bedding but not directly for lice infestations on people.

### NEW QUESTION # 51

Power sprayers:

- A. Are pre-calibrated at the factory and further calibration is not necessary
- B. Need an annual calibration
- **C. Need to have their calibration checked to ensure the proper amount of pesticide is being delivered**

**Answer: C**

Explanation:

Power sprayers must be calibrated to ensure the correct amount of pesticide is applied, as application rates can vary due to wear, nozzle changes, or pressure adjustments. The General Pest Management: Guide for Commercial Applicators - Category 7A (Chapter 5: Pesticide Application) stresses that applicators should check calibration regularly to ensure accuracy, especially for Category 7A applications. Option A is incorrect because factory calibration does not account for field conditions or equipment changes. Option C (annual calibration) is a good practice but not a strict requirement; the need for calibration depends on usage and equipment condition.

### NEW QUESTION # 52

.....

If you do not have access to internet most of the time, if you need to go somewhere is in an offline state, but you want to learn for your Category-7A-General-and-Household-Pest-Control exam.
