General pest management 7a

To control pests of structures, pesticide application is the only means for suppressing pests.
False
When technicians use other practices in addition to pesticide use for controlling pests: These practices often reduce pesticide use or make such use a secondary operation of the program.
The title technician is used in this manual to denote:
All of the above.
Which Michigan regulation requires that pesticide applications be made in a manner that prevents off-target discharges of pesticides, and that pesticide application equipment be properly calibrated and in sound mechanical condition?
Regulation 637
Which Michigan legislation gives the MDARD authority to certify commercial applicators and to prescribe standards for certification?
Natural Resources and Environmental Protection Act
Which federal legislation specifies that all pesticides be classified as either general-use or restricted-use?
FIFRA
Which Michigan legislation establishes the types of certified applicators and expands the pesticide record-keeping requirements?
Regulation 636
Structural pest managers do not have to concern themselves with the possibility of harming endangered species.
False
In Michigan, a vehicle used to transport pesticides for a pesticide application business must:
Have the name of the pesticide applicator firm and the business phone number printed on the exterior
In Michigan, commercial pesticide applicators must provide their customer written information in the Applicator Service Agreement including:
All of the above.
Describe what type of pesticide information should be a part of the risk and benefit information provided to customers.
Definition, general description, why pesticide is used, general toxicity information (i.e., compound type, where applied, exposure information, amount/type applied, label compliance), precautionary measures and instructions to customer on site preparation, precautions, etc.
If requested, a commercial pesticide applicator must provide the customer with pesticide product labels and MSDS sheets.
True
Pesticide drift is not a concern to Category 7A applicators.
False
Notification and posting requirements include:

OCPE Pesticide Applicator Category 7A General and Household Pest Control Exam 認定 Category-7A-General-and-Household-Pest-Control 試験問題 (Q10-Q15):

質問 # 10

Which is the correct choice for the following application situation using TEMPRID?

For an outdoor application for ticks, the:

- A. 7A category does not cover treatment for ticks outdoors; you would need a 7B category certification
- B. Suggested rate of application is 0.075% per 1000 sq. ft.
- C. Suggested rate of application is 0.54 fluid ozs. per 1000 sq. ft.

正解: C

解説:

TEMPRID SC (a common pesticide for Category 7A) is labeled for outdoor tick control. The label specifies a rate of 0.54 fl. oz. per 1000 sq. ft. for outdoor perimeter applications, which aligns with the General Pest Management: Guide for Commercial Applicators - Category 7A (Chapter 5: Pesticide Application) for tick control. Option A is incorrect because Category 7A does cover outdoor tick treatments adjacent to structures (see Question 63). Option B (0.075% per 1000 sq. ft.) refers to a concentration rate for indoor applications, not the volume rate for outdoor use.

質問 # 11

The "recipe" used to mix the pesticide includes the:

- A. Rate per given area
- B. Percentage of water used
- C. Total amount of pesticide concentrate and diluent

正解: C

解説:

The "recipe" for mixing a pesticide refers to the specific instructions for preparing the pesticide solution, which includes the total amount of pesticide concentrate (active ingredient) and diluent (e.g., water or another carrier) to achieve the correct concentration for application. This is detailed on the pesticide label and in the General Pest Management: Guide for Commercial Applicators - Category 7A (Chapter 5: Pesticide Application). Option B (percentage of water) is incorrect because the label specifies amounts, not percentages. Option C (rate per given area) refers to the application rate, not the mixing recipe.

質問 # 12

Notification requirements for multi-family residents require:

- A. A decal notice in each unit prior to the application
- B. Decal notification in all entryways to the building
- C. The post-application decal notice in each unit

正解: B

解説:

For multi-family residences, NJDEP regulations (N.J.A.C. 7:30-9.13) require decal notification in all entryways to the building to inform residents of pesticide applications. This ensures visibility for all tenants without requiring individual unit notices. Option A (decal in each unit prior) is not required, though advance notice to tenants is. Option C (post-application decal in each unit) is impractical and not mandated; post-application notices are typically posted in common areas.

質問 # 13

The two modes of action for the pesticide product TEMPRID are:

- A. Contact and systemic
- B. Combined neurotoxin only
- C. Mist or foam

正解: A

解説:

TEMPRID SC contains two active ingredients: imidacloprid and beta-cyfluthrin. Imidacloprid acts as a systemic insecticide, being absorbed by the pest and affecting its nervous system over time, while beta-cyfluthrin acts as a contact insecticide, killing pests on direct exposure by disrupting nerve function.

The TEMPRID SC label and the General Pest Management: Guide for Commercial Applicators - Category 7A (Chapter 6: Pesticide Types) describe these dual modes of action, which make TEMPRID effective against a wide range of pests. Option B (combined neurotoxin only) is partially correct but does not specify the contact and systemic nature. Option C (mist or foam) refers to application methods, not modes of action.

質問 # 14

Mites are related to ticks; the itch mite and follicle mite are a problem for man and:

- A. Require the use of residual pesticides for their control
- B. Diagnosis and control should be done by a physician
- C. Are poisonous

正解: B

解説:

Itch mites (e.g., scabies) and follicle mites (e.g., Demodex) affect humans and are medical concerns, not structural pest issues.

The General Pest Management: Guide for Commercial Applicators - Category 7A (Chapter 7: Mites) advises that diagnosis and control should be done by a physician, as these mites require medical treatment (e.g., prescription creams). Option A (are poisonous) is incorrect, as they are not poisonous but cause irritation. Option C (residual pesticides) is not appropriate, as these are human parasites, not structural pests.

質問 # 15
