SAP Certified Professional - SAP Enterprise Architect Sample Questions (Q28-Q33):

NEW QUESTION # 28

Demand and Supply Planning (SAP IBP) implementation has been identified as a quick win, based on feedback from a large cross section of Wanderlust stakeholders. As the Chief Enterprise Architect, you have now been asked to scope and contextualize the architecture project. Architecture principles have already been adopted. Which of the following activities should you to initiate to conclude the Statement of Architecture Work for the intended SAP IBP implementation initiative? Note: There are 3 correct answers to this question.

- A. Outline the aspirational Solution Concept to address the stakeholders' needs and business requirements.
- B. Conduct a Fit Gap Assessment to identify requirements that cannot be met
- C. Define the Solution Context for the architecture work.
- D. Conduct a technical Proof of Concept to understand features and functionalities of SAP IBP.
- E. Conduct a high-level Capability Assessment to identify areas of improvement (business and IT).

Answer: A,B,E

NEW QUESTION # 29

Which artifacts does SAP provide as part of the SAP Reference Business Architecture content?

- A. Business Capability Model/Business Process Model
- B. Business Process Model/Solution Process Model
- C. Business Capability Model/Business Data Model/Business Role Model/Product Map

Answer: A

Explanation:

Explanation

The SAP Reference Business Architecture content provides a set of artifacts that can be used to describe the business architecture of an organization. These artifacts include:

Business Capability Model: This model describes the capabilities that an organization needs to have in order to achieve its business goals.

Business Process Model: This model describes the processes that an organization uses to deliver its products and services.

Business Data Model: This model describes the data that an organization uses to support its business processes.

Business Role Model: This model describes the roles that people play in an organization.

Product Map: This map shows how the different products and services that an organization offers are related to each other.

The SAP Reference Business Architecture content is a valuable resource for organizations that are looking to improve their business architecture. It provides a common language and set of concepts that can be used to describe the business architecture of an organization.

However, it is important to note that the SAP Reference Business Architecture content is just a starting point.

Organizations will need to tailor the content to their specific needs.

NEW QUESTION # 30

For the next Architecture Board meeting, you need to determine the next steps required after the business, application/data and technology architecture designs have been created. What do you recommend?

- **A. Reviewing Business Application/Data and Technology Architecture artifacts with stakeholders and signing off on first versions. Using Transition Architectures to build the Architecture Roadmap. Creating first drafts of the required work packages and the Project/Rollout plan.**
- B. Finalizing the Business, Application/Data, and Technology Architecture artifacts. Building an Architecture Roadmap. Creating a first draft of the Project/Rollout Project plan.
- C. Establishing change management processes for the management of the business application/data and technology artifacts. Handing over the artifacts to the implementation partner and rolling out the project

Answer: A

Explanation:

After the business, application/data, and technology architecture designs have been created, it is vital to engage with stakeholders to review these artifacts and gain their sign-off, ensuring that the designs meet the business requirements and are aligned with the strategic direction of the company. Transition Architectures are an essential part of building the Architecture Roadmap as they provide interim 'target states' that enable the organization to move towards the final architecture in a controlled manner. Creating the initial drafts of the work packages and the project/rollout plan is necessary to commence the detailed planning for implementation. = This approach is documented within the SAP Enterprise Architecture development process, which underscores the importance of stakeholder engagement, Transition Architectures, and detailed planning for successful EA implementation. Relevant documents include "SAP Enterprise Architecture Framework" and "Transition Architecture Planning in SAP Environments."

NEW QUESTION # 31

Which of the following roles are missing from Wanderlust's current Enterprise Architecture practice structure? Note: There are 2 correct answers to this question.

- **A. Architecture Board**
- B. Business Architect
- **C. Data Architect**
- D. Application Architect

Answer: A,C

Explanation:

Explanation

Wanderlust's current Enterprise Architecture practice structure includes the following roles:

Business Architect: This role is responsible for understanding the business requirements and translating them into technical requirements.

Application Architect: This role is responsible for designing and implementing applications that meet the business requirements.

Technical Architect: This role is responsible for designing and implementing the underlying infrastructure that supports the applications.

However, the structure is missing the following roles:

Data Architect: This role is responsible for designing and managing the data architecture. This includes defining the data models, data warehouses, and data lakes.

Architecture Board: This role is responsible for overseeing the Enterprise Architecture practice and ensuring that it is aligned with the business goals.

The Architecture Board is responsible for setting the overall direction of the Enterprise Architecture practice and ensuring that it is aligned with the business goals. The Board also provides oversight and guidance to the other roles in the practice.

The Data Architect is responsible for designing and managing the data architecture. This includes defining the data models, data warehouses, and data lakes. The Data Architect also works with the Business Architect to ensure that the data architecture meets the business requirements.

The absence of these two roles in Wanderlust's current Enterprise Architecture practice structure suggests that the practice is not fully mature. The addition of these roles would help to ensure that the practice is more effective and aligned with the business goals.

NEW QUESTION # 32

While discussing the Smart Battery initiative in greater detail with the appropriate stakeholder, as Chief Enterprise Architect of Wanderlust, you discover that several key areas such as value proposition, cost structure, revenue streams, partners, and channels have been worked upon in isolation and therefore do not tally with each other. Which artifact would you recommend to bring all the

above key dimensions together in a single window, to have a unified, consistent, holistic view of the Smart Battery initiative?

- **A. Business Model Canvas**
- B. Statement of Architecture Work
- C. Business Strategy Map
- D. Architecture Principles

Answer: A

Explanation:

A Business Model Canvas is a strategic management and entrepreneurial tool that allows you to describe, design, challenge, invent, and pivot your business model. A Business Model Canvas consists of nine building blocks that cover the four main areas of a business: customers, offer, infrastructure, and financial viability². These building blocks are:

Value Proposition: The value that you deliver to your customers and the problem that you solve for them.

Customer Segments: The different groups of people or organizations that you aim to reach and serve.

Channels: The ways that you communicate with and deliver value to your customers.

Customer Relationships: The types of relationships that you establish and maintain with your customers.

Revenue Streams: The sources of income that you generate from your value proposition.

Key Resources: The most important assets that you need to create and deliver your value proposition.

Key Activities: The most important things that you do to create and deliver your value proposition.

Key Partnerships: The network of suppliers and partners that help you create and deliver your value proposition.

Cost Structure: The most significant costs that you incur to create and deliver your value proposition.

A Business Model Canvas is a useful artifact to bring all the key dimensions of the Smart Battery initiative together in a single window, to have a unified, consistent, holistic view of the initiative. By using a Business Model Canvas, you can:

Visualize the entire business model of the Smart Battery initiative on one page.

Identify the gaps, inconsistencies, or conflicts among the different elements of the business model.

Align the value proposition, cost structure, revenue streams, partners, and channels with the customer segments and their needs.

Test and validate your assumptions and hypotheses about the business model.

Iterate and improve your business model based on feedback and data.
