Take the best decision of your professional career and enroll in the Salesforce Certified Data Architect (Data-Architect) certification exam and download Salesforce Certified Data Architect (Data-Architect) exam questions and start preparing today.

### Salesforce Certified Data Architect Sample Questions (Q165-Q170):

#### NEW QUESTION # 165

Universal Containers (UC) is implementing Salesforce Sales Cloud and Service Cloud. As part of their implementation, they are planning to create a new custom object (Shipments), which will have a lookup relationship to Opportunities. When creating shipment records, Salesforce users need to manually input a customer reference, which is provided by customers, and will be stored in the Customer\_Reference\_\_c text custom field. Support agents will likely use this customer reference to search for Shipment records when resolving shipping issues. UC is expecting to have around 5 million shipment records created per year. What is the recommended solution to ensure that support agents using global search and reports can quickly find shipment records?

- A. Implement an archiving process for shipment records created after three years.
- B. Set Customer-Reference\_\_c as an External ID (non-unique).

- C. Implement an archiving process for shipment records created after five years.
- D. Set Customer-Reference\_c as an External ID (unique).

**Answer: D**

#### NEW QUESTION # 166

Cloud Kicks stores Invoice records in a custom object. Invoice records are being sent to the Accounting department with missing States and incorrectly formatted Postal Codes.

Which two actions should Cloud Kicks take to improve data quality? (Choose two.)

- A. Write an Apex Trigger to require all fields to be populated.
- B. Change each address field to required on the Page Layout.
- C. Utilize a Validation Rule with a CONTAINS operator on address fields.
- D. Utilize a Validation Rule with a REGEX operator on Postal Code.

**Answer: C,D**

#### NEW QUESTION # 167

UC has a requirement to migrate 100 million order records from a legacy ERP application into the salesforce platform. UC does not have any requirements around reporting on the migrated data.

What should a data architect recommend to reduce the performance degradation of the platform?

- A. Implement a custom big object to store the data.
- B. Use a standard big object defined by salesforce.
- C. Create a custom object to store the data.
- D. Use the standard "Order" object to store the data.

**Answer: A**

Explanation:

Implementing a custom big object to store the data is the best recommendation to reduce the performance degradation of the platform, as it allows storing large volumes of data that do not need real-time access or reporting. Custom big objects can be defined using metadata API or developer console, and support up to 1 billion records per object. Creating a custom object or using the standard order object would consume a lot of storage space and impact the performance of queries and reports. Using a standard big object defined by salesforce would not be applicable for order records, as standard big objects are predefined for specific use cases such as audit trails or field history.

#### NEW QUESTION # 168

A large telecommunication provider that provides internet services to both residence and business has the following attributes:

A customer who purchases its services for their home will be created as an Account in Salesforce.

Individuals within the same house address will be created as Contact in Salesforce.

Businesses are created as Accounts in Salesforce.

Some of the customers have both services at their home and business.

What should a data architect recommend for a single view of these customers without creating multiple customer records?

- A. Customers are created as Accounts for Residence Account and use Parent Account to relate Business Account.
- B. Customers are created as Contacts and related to Business and Residential Accounts using the Account Contact Relationships.
- C. Customer are created as individual objects and relate with Accounts for Business and Residence accounts.
- D. Customers are created as Person Accounts and related to Business and Residential Accounts using the Account Contact relationship.

**Answer: B**

#### NEW QUESTION # 169

Ursa Major Solar has defined a new Data Quality Plan for their Salesforce data.

Which two approaches should an Architect recommend to enforce the plan throughout the organization?  
(Choose two.)

- A. Schedule a weekly dashboard displaying records that are missing information to be sent to managers for review.
- B. Schedule reports that will automatically catch duplicates and merge or delete the records every week.
- C. Ensure all data is stored in an external system and set up an integration to Salesforce for view-only access.
- D. Enforce critical business processes by using Workflow, Validation Rules, and Apex code.

**Answer: A,D**

Explanation:

Enforcing critical business processes by using Workflow, Validation Rules, and Apex code can help ensure data quality and consistency by applying rules and logic to the data entry and update<sup>3</sup>. Scheduling a weekly dashboard displaying records that are missing information to be sent to managers for review can help identify and fix data quality issues by providing visibility and accountability<sup>4</sup>.

## NEW QUESTION # 170

.....

Taking Data-Architect practice exams is also important because it helps you overcome your mistakes before the final attempt. When we talk about the Data-Architect certification exam, the Salesforce Data-Architect practice test holds more scoring power because it is all about how you can improve your Salesforce Certified Data Architect (Data-Architect) exam preparation.
