More importantly, there are a lot of experts in our company; the first duty of these experts is to update the study system of our company day and night for all customers. By updating the study system of the AP-202 study materials, we can guarantee that our company can provide the newest information about the exam for all people. We believe that getting the newest information about the exam will help all customers pass the AP-202 Exam easily. If you purchase our study materials, you will have the opportunity to get the newest information about the AP-202 exam. More importantly, the updating system of our company is free for all customers. It means that you can enjoy the updating system of our company for free.

Salesforce B2B Commerce for Developers Accredited Professional Sample Questions (Q13-Q18):

NEW QUESTION # 13

Northern Trail Outfitters (NTO) has a requirement to schedule a reusable data import across multiple orgs for customer demo purposes. NTO also has a requirement to seed data of related objects-ProductCatalog, ProductCategory, Product2, and ProductCategoryProduct- while preserving its relationships and without purchasing additional licenses or using thirdparty tools. What is the recommended tool a developer should select to address the requirement?

- A. Dataloader.io
- B. Data Import Wizard
- C. Bulk Import Using Command Line Interface
- D. Commerce Product Data Import

Answer: D

Explanation:

n:The Commerce Product Data Import resource is the recommended tool for importing products for a B2B or B2C store using a .csv file. This resource supports importing data of related objects, such as ProductCatalog, ProductCategory, Product2, and ProductCategoryProduct, while preserving their relationships. It also does not require additional licenses or third-party tools. The other options are either not specific to Commerce products, or do not support importing data of related objects.Reference:
Commerce Product Import Resource
Import and Export Commerce Data
B2B and D2C Commerce Data Model

NEW QUESTION # 14

How do the REST APIs in Salesforce B2B Commerce support pass-through parameter handling

- A. Parameters are filtered out before the request is processed
- B. Parameters are separated, but unused
- C. Parameters are passed through the service handlers
- D. An exception is generated for unknown API keys

Answer: C

Explanation:

The REST APIs in Salesforce B2B Commerce support pass-through parameter handling by passing parameters through the service handlers. This means that any parameters that are not recognized by the REST API framework will be passed to the service handler class that implements the API logic. The service handler class can then use these parameters for custom logic or validation.

NEW QUESTION # 15

In which three different ways can a theme be enabled in Salesforce B2B Commerce? (3 answers)

- A. Dynamically through a hook
- B. Account
- C. A per user setting
- D. A Storefront setting
- E. An Account Group field value

Answer: A,D,E

Explanation:

A theme can be enabled in Salesforce B2B Commerce in three different ways:

A Storefront setting: The theme can be specified in the Storefront Configuration settings in CCAdmin. This will apply the theme to all users who access the storefront.

An Account Group field value: The theme can be specified in the Theme field of an Account Group record in Salesforce. This will apply the theme to all users who belong to that account group.

Dynamically through a hook: The theme can be specified dynamically by extending the cc_hk_theme hook. This hook allows changing the theme based on various factors, such as the user, cart, product, or storefront. For example, the hook can apply a different theme for a specific product category or for a specific user segment.

NEW QUESTION # 16

Which HTML element can be used as a root tag for a Lightning Web Component's HTML file?

- A. <body>
- B. <template>
- C. <html>
- D. <article>

Answer: B

Explanation:

In Lightning Web Components (LWC), the root tag for the component's HTML file must be <template>. This tag defines the markup structure for the component and is essential for the LWC framework to correctly render the component in the Salesforce

Lightning Experience. The <template> tag is unique to LWC and is not interchangeable with standard HTML tags like <body>, <article>, or <html>. For more information, see the Salesforce LWC documentation: [Salesforce LWC HTML Templates Documentation](#).

NEW QUESTION # 17

A Northern Trail Outfitters (NTO) developer made a tile component. To expose a click event and react to user input using the markup below, what should replace <CLICK_EVENT>?

- A. javascript:avoid(0);tileClick();
- B. {event:tileClick}
- C. {tileClick}
- D. tileClick()

Answer: D

Explanation:

To expose a click event and react to user input in a Lightning web component, the developer should use a method name as the value of the onclick attribute in the template. The method name should be followed by parentheses, as in tileClick(). This syntax indicates that the method is invoked when the element is clicked. The method should be defined in the JavaScript file of the component, and it can access the event object as a parameter. The other options are either invalid or incorrect. For example, {event:tileClick} is not a valid syntax for an onclick attribute, javascript:avoid(0);tileClick(); is unnecessary and outdated, and {tileClick} is a property binding expression, not a method invocation.
