

CrowdStrike CCFA-200b Praxisprüfung & CCFA-200b Musterprüfungsfragen

Übrigens, Sie können die vollständige Version der Fast2test CCFA-200b Prüfungsfragen aus dem Cloud-Speicher herunterladen: https://drive.google.com/open?id=19fwROYgTBFMcT__4VCUAbBQ2dmdoV2Sd

Sind Sie IT-Fachmann? Wollen Sie Erfolg? Dann kaufen Sie die Schulungsunterlagen zur CrowdStrike CCFA-200b Zertifizierungsprüfung von Fast2test. Sie werden von der Praxis prüft. Sie werden Ihnen helfen, die CrowdStrike CCFA-200b Zertifizierungsprüfung zu bestehen. Ihre Berufsaussichten werden sich sicher verbessern. Sie werden ein hohes Gehalt beziehen. Sie können eine Karriere in der internationalen Gesellschaft machen. Wenn Sie spitze technischen Fähigkeiten haben, sollen Sie sich keine Sorgen machen. Die Schulungsunterlagen zur CrowdStrike CCFA-200b Zertifizierungsprüfung von Fast2test werden Ihren Traum verwirklichen. Wir werden mit Ihnen durch dick und dünn gehen und die Herausforderung mit Ihnen zusammen nehmen.

CrowdStrike CCFA-200b Prüfungsplan:

| Thema | Einzelheiten |
|---------|--|
| Thema 1 | <ul style="list-style-type: none"> • Workflows: This domain focuses on configuring automated workflows that execute predefined actions when specific triggers or conditions are met. |
| Thema 2 | <ul style="list-style-type: none"> • Group Creation: This domain covers assigning endpoints to appropriate groups for policy application and following best practices for managing host group structures. |
| Thema 3 | <ul style="list-style-type: none"> • Policy Application: This domain encompasses configuring prevention policies for security posture, sensor update policies, RTR audit policies, containment policies with IP exclusions, and managing quarantined files. |
| Thema 4 | <ul style="list-style-type: none"> • User Management: This domain covers determining appropriate roles for console access, creating and assigning roles with specific permissions, and managing API keys for platform access. |
| Thema 5 | <ul style="list-style-type: none"> • Host Management and Setup: This domain addresses filtering and organizing hosts, disabling detections and understanding their effects, managing Reduced Functionality Mode situations, locating inactive sensors and their retention, and utilizing relevant management reports. |
| Thema 6 | <ul style="list-style-type: none"> • Dashboards and Reports: This domain covers understanding different sensor report types and their use cases, and interpreting various audit logs for tracking platform activities. |

- Rules Configuration: This domain involves creating custom IOA rules, configuring exclusions to resolve false positives, managing IOC settings for threat detection, and configuring CID-wide General Settings.

CCFA-200b Der beste Partner bei Ihrer Vorbereitung der CrowdStrike Certified Falcon Administrator - 2024 Version

Als Anbieter des CrowdStrike CCFA-200b (CrowdStrike Certified Falcon Administrator - 2024 Version) IT-Prüfungskompendium bieten IT-Experten von Fast2test ständig die Produkte von guter Qualität. Sie bieten den Kunden kostenlosen Online-Service rund um die Uhr und aktualisieren CrowdStrike CCFA-200b (CrowdStrike Certified Falcon Administrator - 2024 Version) Prüfungsfragen und Antworten auch am schnellsten.

CrowdStrike Certified Falcon Administrator - 2024 Version CCFA-200b Prüfungsfragen mit Lösungen (Q51-Q56):

51. Frage

What best describes what happens to detections in the console after clicking "Enable Detections" for a host which previously had its detections disabled?

- A. Enables custom detections for the host
- B. New detections will start appearing in the console, and all retroactive stored detections will be restored to the console for that host
- C. New detections will start appearing in the console immediately. Previous detections will not be restored to the console for that host
- D. Preventions will be enabled for the host

Antwort: C

Begründung:

The option that best describes what happens to detections in the console after clicking "Enable Detections" for a host which previously had its detections disabled is that new detections will start appearing in the console immediately. Previous detections will not be restored to the console for that host. The "Enable Detections" feature allows you to enable or disable the detection and prevention capabilities of the Falcon sensor on a specific host. When you disable detections for a host, the sensor will stop sending any detection or prevention events to the Falcon console, and any existing events for that host will be removed from the console. When you enable detections for a host, the sensor will resume sending any new detection or prevention events to the Falcon console, but any previous events for that host will not be restored to the console.

52. Frage

When performing targeted filtering for a host on the Host Management Page, which filter bar attribute is NOT case-sensitive?

- A. Username
- B. Domain
- C. Hostname
- D. Model

Antwort: C

Begründung:

When performing targeted filtering for a host on the Host Management Page, the filter bar attribute that is not case-sensitive is Hostname. The Hostname attribute allows you to filter hosts by their computer name or DNS name. The Hostname filter is not case-sensitive, meaning that it will match hosts regardless of the capitalization of their names. For example, filtering by `hostname=DESKTOP-1234` will match hosts with names such as `DESKTOP-1234`, `desktop-1234`, or `Desktop-12342`.

53. Frage

What log would you use to investigate unusual activity invoked with a script interfacing with the Falcon platform?

- A. RTR session audit
- B. Falcon UI audit
- C. Prevention policy debug
- **D. API audit**

Antwort: D

Begründung:

A script interfacing with the Falcon platform typically uses API credentials, so the correct log is the API audit

. Falcon UI audit logs track actions performed through the web console. RTR session audit logs track Real Time Response sessions and commands executed on hosts. Prevention policy debug is not the right audit source for platform API activity. When investigating scripted or automated access, administrators must determine which API client or credential performed the action, when it occurred, and what endpoint or operation was invoked. The CCFA user management and audit topics emphasize separating console user activity from API-driven activity so that administrative investigation maps to the correct telemetry source.

API audit is therefore the correct answer.

54. Frage

You have 100 hashes that have been prohibited by management and need to be blocked within your organization. Using Falcon, what is the best way to accomplish this?

- A. Navigate to Configure > IOC Management. Add a custom Prevention Policy. Add the list of hashes. Set the action to Block. Verify the policy includes Custom Execution Blocking.
- B. Navigate to Configure > Prevention policies. Add an IOC Policy. Add the list of hashes as CSV file. Set the action to Block and Alert. Verify Custom Blocking inside Execution Blocking is active.
- C. Navigate to Configure > Prevention policies. Add an IOC Policy. Add the list of hashes as CSV file. Set the action to Block. Verify Custom Execution Blocking is active.
- **D. Navigate to Configure > IOC Management. Add a custom IOC. Add the list of hashes. Set the action to Block. Verify the prevention policy includes Custom Blocking under Execution Blocking.**

Antwort: D

Begründung:

The correct method is to use IOC Management , add the hashes as custom IOCs, set the action to Block , and ensure the applicable prevention policy has Custom Blocking enabled under Execution Blocking. Hash- based blocking is an IOC Management function. Prevention policies do not create "IOC Policies" in the way the distractors describe; instead, prevention policies must include the setting that enforces custom blocking.

Setting hashes to Block without enabling the relevant policy capability may fail to enforce the intended behavior on hosts. The CCFA rule configuration and policy application topics emphasize that IOC Management defines the custom indicators and actions, while prevention policy settings determine whether those actions are enforced on endpoints.

55. Frage

You are deploying the Falcon sensor to 500 hosts. Hosts in an Organizational Unit need a specific exclusion that was previously identified. This OU is expected to add members over the next quarter. What is the best way to create a host group for this OU?

- A. Create a dynamic group with an assignment rule that excludes the OU
- B. Create a Dynamic Group targeting Windows 10 OS in the domain
- **C. Create a dynamic group with an assignment rule that filters for the OU**

Antwort: C

Begründung:

The best approach is to create a dynamic group with an assignment rule that filters for the OU . Because the OU is expected to gain members over time, dynamic membership ensures that new hosts automatically enter the appropriate group when their Active Directory OU attribute matches the rule. Targeting only Windows 10 would be imprecise because it would include hosts outside the intended OU and miss non- Windows-10 systems in scope. Excluding the OU is the opposite of the requirement. CCFA group creation guidance emphasizes dynamic groups for membership that should follow changing attributes such as OU, OS version,

platform, tags, or host type. This supports scalable policy and exclusion assignment without manual updates.

56. Frage

.....

Jeder hat seinen eigenen Traum. Was ist Ihr Traum? Beförderungschance, mehr Gehalt und so weiter. Mein Traum ist es, die CrowdStrike CCFA-200b Zertifizierungsprüfung zu bestehen. Mit diesem Zertifikat können alle Probleme gelöst werden. Jedoch ist es schwierig, diese Zertifizierung zu bestehen. Aber es ist nicht wichtig. Ich wähle die Schulungsunterlagen zur CrowdStrike CCFA-200b Zertifizierungsprüfung von Fast2test, weil sie meinen Wunsch erfüllen können. Wenn Sie auch IT-Traum haben, dann verwirklichen Sie den Traum schnell. Wählen Sie doch die Schulungsunterlagen zur CrowdStrike CCFA-200b Zertifizierungsprüfung von Fast2test, sie sind eher zuverlässig.
