```

- A. Manually configure voice VLAN on the phone.
- **B. Delete phone ITL file.**
- C. Ensure that DHCP scope has option 150 configured.
- D. Update phone configuration in Cisco UCM with the correct MAC address.

Answer: B

Explanation:

The ITL file is used for certificate-based trust between the phone and the Cisco UCM TFTP server. If the ITL file is invalid or missing, the phone cannot securely communicate with the TFTP server to download its configuration.

To resolve this, the administrator must manually delete the ITL file from the phone. This forces the phone to request a new ITL file from the TFTP server during its next boot.

Steps to Delete the ITL File:

1. On the phone, go to Settings > Security Configuration > Trust List.
2. Select ITL File and delete it.
3. Restart the phone to allow it to re-download the correct ITL file and configuration.
