

# Free PDF Unparalleled VMware - 2V0-16.25 - Valid VMware vSphere Foundation 9.0 Administrator Test Review

P.S. Free & New 2V0-16.25 dumps are available on Google Drive shared by itPass4sure: <https://drive.google.com/open?id=1oXcjYZSUKahlg3-hF6UYlp9rgsI3S8dx>

Our 2V0-16.25 study materials boost the self-learning and self-evaluation functions so as to let the clients understand their learning results and learning process, then find the weak links to improve them. Through the self-learning function the learners can choose the learning methods by themselves and choose the contents which they think are important. Through the self-evaluation function the learners can evaluate their mastery degree of our 2V0-16.25 Study Materials and their learning process. The two functions can help the learners adjust their learning arrangements and schedules to efficiently prepare the exam.

## VMware 2V0-16.25 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> <li>VMware vSphere Foundation Fundamentals: This section of the exam measures the skills of Virtualization Engineers and focuses on the essentials of virtualization technology. It introduces the principles of virtualization, explores use cases, and highlights the value it brings to businesses. Candidates are expected to demonstrate knowledge of VMware compute components such as vCenter and ESX, cluster configuration, and lifecycle management of virtual machines. It also covers secure workload operations, encryption, and managing resources with content libraries. In addition, storage fundamentals are examined through configuring vSphere storage, deploying VMware vSAN clusters, defining storage policies, and ensuring data availability. Networking fundamentals are also introduced, requiring the ability to differentiate between VMware vSphere networking components.</li> </ul>
Topic 2	<ul style="list-style-type: none"> <li>IT Architectures, Technologies, Standards: This section of the exam measures the understanding of IT Infrastructure Architects and covers foundational concepts of architectures, emerging technologies, and industry standards. Although no testable objectives are listed here, it establishes the baseline knowledge needed to interpret and design VMware-related environments effectively.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>Plan and Design the VMware by Broadcom Solution: This section of the exam measures the ability of VMware Solution Architects to plan and design solutions. While there are no specific testable objectives included, the focus is on preparing professionals to design VMware-based solutions that align with organizational goals and best practices.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>Troubleshoot and Optimize the VMware Solution: This section of the exam measures the ability of Systems Engineers to troubleshoot and optimize VMware-based environments. While no explicit testable objectives are listed, candidates are expected to apply their problem-solving skills to diagnose, resolve, and enhance VMware solutions for improved reliability and performance.</li> </ul>

Topic 5	<ul style="list-style-type: none"> <li>• Deploy, Configure, and Operate VMware vSphere Foundation (VVF): This section of the exam measures the expertise of Data Center Administrators and emphasizes hands-on skills in deploying and configuring VMware vSphere Foundation environments. Candidates must understand the components of a VVF deployment, configure Supervisors within clusters, and manage identity, access control, licensing, and certificate management. The objectives also extend to lifecycle management within the vSphere Foundation. Furthermore, it explores operational tasks including monitoring and analyzing logs, configuring alerting, managing dashboards, and integrating with VMware Cloud Foundation (VCF) Operations. Candidates will also be tested on cost and pricing configuration, compliance monitoring, and security hardening practices. Finally, automation skills are validated through deploying services with Supervisors, running Kubernetes workloads, using VM services, and integrating VCF Operations Orchestrator to support enterprise automation.</li> </ul>

## Successfully Get the Quality VMware 2V0-16.25 Exam Questions

About VMware 2V0-16.25 Exam, each candidate is very confused. Everyone has their own different ideas. But the same idea is that this is a very difficult exam. We are all aware of VMware 2V0-16.25 exam is a difficult exam. But as long as we believe itPass4sure, this will not be a problem. itPass4sure's VMware 2V0-16.25 exam training materials is an essential product for each candidate. It is tailor-made for the candidates who will participate in the exam. You will absolutely pass the exam. If you do not believe, then take a look into the website of itPass4sure. You will be surprised, because its daily purchase rate is the highest. Do not miss it, and add to your shoppingcart quickly.

## VMware vSphere Foundation 9.0 Administrator Sample Questions (Q40-Q45):

### NEW QUESTION # 40

An administrator creates a cluster by joining a Medium sized VMware Cloud Foundation (VCF) Operations for Logs node to an existing Medium sized single-node deployment.

The secondary node of the cluster fails, degrading the functionality of VCF Operations for Logs.

What action should the administrator take to create a healthy active cluster?

- A. Scale up the VCF Operations for Logs primary and secondary node to size Large.
- B. Rebuild the VCF Operations for Logs cluster secondary node and add an additional node to the cluster.
- C. Scale up the VCF Operations for Logs primary and secondary node to size Extra Large.
- **D. Rebuild the VCF Operations for Logs cluster secondary node and place the cluster back into operation.**

**Answer: D**

Explanation:

In VMware Cloud Foundation (VCF) Operations for Logs, clusters require a minimum of three healthy nodes to function in a fully active and resilient state. When a cluster is deployed with only two nodes (primary + one secondary), the environment does not meet the minimum recommended requirement. If the secondary node fails, the cluster becomes degraded and functionality is reduced.

The correct remediation is:

\* Rebuild the failed secondary node so that the cluster can return to a healthy state.

\* After rebuilding, the node must be rejoined to the primary using the Management # Cluster workflow (secure token, IP/hostname of primary, etc.).

Why not the other options?

\* A. Scale up to Extra Large ## Scaling up affects resource capacity (vCPU, RAM, disk) but does not solve the problem of missing nodes.

\* B. Scale up to Large ## Same reason as above, scaling up does not restore HA.

\* D. Rebuild the secondary and add an additional node ## While adding more nodes is a best practice (since HA clusters require three nodes), the minimum action required to restore a healthy active cluster is to rebuild the failed node. Adding more nodes is optional for increased resiliency.

Therefore, the immediate and verified answer is to rebuild the failed secondary node.

#### NEW QUESTION # 41

An administrator needs to ensure that only specific users can manage the virtual machines (VM) in a specific VMware vCenter folder.

Which three steps are required to accomplish this? (Choose three.)

- A. Create a new role in vCenter with VM management permissions.
- B. Add the identity source to vCenter.
- C. Create a datastore cluster.
- D. Apply the role to the specific vCenter folder.
- E. Assign the new role to the appropriate users/groups.

**Answer: A,D,E**

Explanation:

To ensure that only specific users can manage VMs in a specific VMware vCenter folder, the following three steps are required:

\* Create a new role in vCenter with VM management permissions(Answer B):You must define a custom role tailored to managing VMs, which includes permissions such as powering on/off VMs, editing VM settings, and accessing consoles. This role must include the appropriate privileges under the

"Virtual machine" category in vCenter permissions.

\* Apply the role to the specific vCenter folder(Answer C):The custom role needs to be applied directly to the target vCenter folder. This enables scope-based access control, where permissions are applied only to VMs within that folder.

\* Assign the new role to the appropriate users/groups(Answer A):After creating the role and applying it to the folder, the role must be associated with the correct users or groups. This step uses the vCenter Server's identity source integration to assign roles.

Why the other options are incorrect:

\* D. Add the identity source to vCenter:This is a prerequisite step for any role assignment but is not directly required in this specific scenario if the identity source is already configured.

\* E. Create a datastore cluster:This is unrelated to managing VM access. Datastore clusters pertain to storage management and are not involved in user permissions or role assignments.

VMware vSphere 9.0 PDF, section on vCenter Server Permissions Management.

#### NEW QUESTION # 42

An administrator has successfully deployed the VMware Cloud Foundation (VCF) Installer appliance to begin a new VMware vSphere Foundation (VVF) deployment. The VMware ESX hosts are powered on and meet all hardware and connectivity prerequisites.

What is the next step to begin deploying vSphere Foundation?

- A. Launch the VCF Installer deployment wizard.
- B. Enable SSH on all ESX hosts.
- C. Manually deploy the vCenter Server Appliance.
- D. Install SDDC Manager using the VCF Installer.

**Answer: A**

Explanation:

After successfully deploying the VCF Installer appliance, and ensuring ESXi hosts are powered on and meet prerequisites, the next steps to:

\* Launch the VCF Installer deployment wizard, which guides administrators through host onboarding, vCenter deployment, and cluster setup for vSphere Foundation.

Other options:

\* A. Enable SSH on all ESX hosts# Not required unless troubleshooting.

\* C. Install SDDC Manager using VCF Installer# Only applies to full Cloud Foundation, not vSphere Foundation deployment.

\* D. Manually deploy vCenter Server Appliance# The Installer wizard automates this.

References:

#### NEW QUESTION # 43

An administrator is tasked with deploying a VMware Cloud Foundation (VCF) Operations for Logs appliance into vSphere Foundation.

After downloading the .ova, which component does the administrator use to deploy the file?

- A. VCF Operations
- B. VCF Automation
- C. VCF Fleet Management
- **D. vSphere Client**

**Answer: D**

Explanation:

To deploy the VCF Operations for Logs OVA appliance:

- \* The vSphere Client is used to deploy .ova and .ovf templates directly into a vCenter environment.
- \* After deployment, the appliance can be configured and integrated with VCF.

Other options:

- \* A. VCF Fleet Management# Used for multi-instance management, not OVA deployment.
- \* C. VCF Automation# Provides automation workflows, not appliance deployment.
- \* D. VCF Operations# Monitoring and analytics platform, not used for OVA installs.

#### NEW QUESTION # 44

An administrator must configure identity access for VMware vSphere Foundation (VVF) to allow admin accounts from the enterprise Active Directory domain corp.local to log in using domain credentials. Security requires authentication to use the default Active Directory protocol, without federation.

Which configuration step is required to enable Active Directory users to authenticate to vCenter?

- A. Configure a trusted identity provider using OpenID Connect (OIDC).
- **B. Add Active Directory over LDAP as an identity source.**
- C. Configure Identity Federation using SAML with corp.local.
- D. Add the domain controller certificate to the Trusted Root store in vCenter.

**Answer: B**

Explanation:

To allow Active Directory domain users (corp.local) to authenticate in vCenter with domain credentials:

- \* The correct method is configuring Active Directory over LDAP as an identity source. (D)
- \* This uses the default AD protocol (LDAP/Kerberos) without requiring SAML or OIDC federation.

Other options:

- \* A. Adding domain controller certificate# Needed for LDAPS but not the main step.
- \* B. Identity Federation with SAML# Requires federation, not allowed per requirements.
- \* C. OpenID Connect (OIDC)# Used for external IdPs, not traditional AD auth.
