Databricks-Certified-Data-Analyst-Associate Interactive EBook - Databricks-Certified-Data-Analyst-Associate Reliable Exam Cost

2026 Latest PrepAwayTest Databricks-Certified-Data-Analyst-Associate PDF Dumps and Databricks-Certified-Data-Analyst-Associate Exam Engine Free Share: https://drive.google.com/open?id=1VJ1mGVmcRo2IsQ40O07tFnvPC-Qh9KvZ

In addition to the free download of sample questions, we are also confident that candidates who use Databricks-Certified-Data-Analyst-Associate Test Guide will pass the exam at one go. Databricks Certified Data Analyst Associate Exam prep torrent is revised and updated according to the latest changes in the syllabus and the latest developments in theory and practice. After you pass the exam, if you want to cancel your account, contact us by email and we will delete all your relevant information. Second, the purchase process of Databricks Certified Data Analyst Associate Exam prep torrent is very safe and transactions are conducted through the most reliable guarantee platform.

PrepAwayTest offers updated and real Databricks Databricks-Certified-Data-Analyst-Associate Exam Dumps for Databricks Certified Data Analyst Associate Exam (Databricks-Certified-Data-Analyst-Associate) test takers who want to prepare quickly for the Databricks-Certified-Data-Analyst-Associate examination. These actual Databricks-Certified-Data-Analyst-Associate exam questions have been compiled by a team of professionals after a thorough analysis of past papers and current content of the Databricks-Certified-Data-Analyst-Associate test. If students prepare with these valid Databricks-Certified-Data-Analyst-Associate questions, they will surely become capable of clearing the Databricks-Certified-Data-Analyst-Associate examination within a few days.

Databricks-Certified-Data-Analyst-Associate Reliable Exam Cost - Dumps Databricks-Certified-Data-Analyst-Associate Free

In the past ten years, we have made many efforts to perfect our Databricks Databricks-Certified-Data-Analyst-Associate study materials. Our Databricks-Certified-Data-Analyst-Associate study questions cannot tolerate any small mistake. All staff has made great dedication to developing the Databricks Databricks-Certified-Data-Analyst-Associate Exam simulation. Our professional experts are devoting themselves on the compiling and updating the exam materials.

Databricks Certified Data Analyst Associate Exam Sample Questions (Q49-Q54):

NEW QUESTION # 49
A data engineering team has created a Structured Streaming pipeline that processes data in micro-batches and populates gold-level tables. The microbatches are triggered every 10 minutes.
A data analyst has created a dashboard based on this gold level dat
a. The project stakeholders want to see the results in the dashboard updated within 10 minutes or less of new data becoming available within the gold-level tables.

What is the ability to ensure the streamed data is included in the dashboard at the standard requested by the project stakeholders?

- A. A refresh schedule with an always-on SQL Warehouse (formerly known as SQL Endpoint
- B. A refresh schedule with an interval of 10 minutes or less
- C. A refresh schedule with a Structured Streaming cluster
- D. A refresh schedule with stakeholders included as subscribers

Answer: B

Explanation:
In this scenario, the data engineering team has configured a Structured Streaming pipeline that updates the gold-level tables every 10 minutes. To ensure that the dashboard reflects the most recent data, it is essential to set the dashboard's refresh schedule to an interval of 10 minutes or less. This synchronization ensures that stakeholders view the latest information shortly after it becomes available in the gold-level tables. Options B, C, and D do not directly address the requirement of aligning the dashboard refresh frequency with the data update interval.

NEW QUESTION # 50
Which of the following statements about a refresh schedule is incorrect?

- A. You must have workspace administrator privileges to configure a refresh schedule
- B. A refresh schedule is not the same as an alert.
- C. A query being refreshed on a schedule does not use a SQL Warehouse (formerly known as SQL Endpoint).
- D. A query can be refreshed anywhere from 1 minute lo 2 weeks
- E. Refresh schedules can be configured in the Query Editor.

Answer: C

Explanation:
Refresh schedules are used to rerun queries at specified intervals, and these queries typically require computational resources to execute. In the context of a cloud data service like Databricks, this would typically involve the use of a SQL Warehouse (or a SQL Endpoint, as they were formerly known) to provide the necessary computational resources. Therefore, the statement is incorrect because scheduled query refreshes would indeed use a SQL Warehouse/Endpoint to execute the query.

NEW QUESTION # 51
A data analyst created and is the owner of the managed table my_ table. They now want to change ownership of the table to a single other user using Data Explorer.
Which of the following approaches can the analyst use to complete the task?

- A. Edit the Owner field in the table page by selecting the Admins group
- B. Edit the Owner field in the table page by selecting All Users
- C. Edit the Owner field in the table page by removing all access
- D. Edit the Owner field in the table page by selecting the new owner's account
- E. Edit the Owner field in the table page by removing their own account

Answer: D

Explanation:
The Owner field in the table page shows the current owner of the table and allows the owner to change it to another user or group. To change the ownership of the table, the owner can click on the Owner field and select the new owner from the drop-down list. This will transfer the ownership of the table to the selected user or group and remove the previous owner from the list of table access control entries1. The other options are incorrect because:
A . Removing the owner's account from the Owner field will not change the ownership of the table, but will make the table ownerless2.
B . Selecting All Users from the Owner field will not change the ownership of the table, but will grant all users access to the table3.
D . Selecting the Admins group from the Owner field will not change the ownership of the table, but will grant the Admins group access to the table3.
E . Removing all access from the Owner field will not change the ownership of the table, but will revoke all access to the table4.
Reference:
1: Change table ownership

2: Ownerless tables
3: Table access control
4: Revoke access to a table

NEW QUESTION # 52
What is a benefit of using Databricks SQL for business intelligence (BI) analytics projects instead of using third-party BI tools?

- A. Advanced dashboarding capabilities
- B. Simultaneous multi-user support
- C. Computations, data, and analytical tools on the same platform
- D. Automated alerting systems

Answer: C

Explanation:
Databricks SQL offers a unified platform where computations, data storage, and analytical tools coexist seamlessly. This integration allows business intelligence (BI) analytics projects to be executed more efficiently, as users can perform data processing and analysis without the need to transfer data between disparate systems. By consolidating these components, Databricks SQL streamlines workflows, reduces latency, and enhances data governance. While third-party BI tools may offer advanced dashboarding capabilities, simultaneous multi-user support, and automated alerting systems, they often require integration with separate data processing platforms, which can introduce complexity and potential inefficiencies.

NEW QUESTION # 53
A data team has been given a series of projects by a consultant that need to be implemented in the Databricks Lakehouse Platform. Which of the following projects should be completed in Databricks SQL?

- A. Segmenting customers into like groups using a clustering algorithm
- B. Automating complex notebook-based workflows with multiple tasks
- C. Testing the quality of data as it is imported from a source
- D. Tracking usage of feature variables for machine learning projects
- E. Combining two data sources into a single, comprehensive dataset

Answer: E

Explanation:
Databricks SQL is a service that allows users to query data in the lakehouse using SQL and create visualizations and dashboards1. One of the common use cases for Databricks SQL is to combine data from different sources and formats into a single, comprehensive dataset that can be used for further analysis or reporting2. For example, a data analyst can use Databricks SQL to join data from a CSV file and a Parquet file, or from a Delta table and a JDBC table, and create a new table or view that contains the combined data3. This can help simplify the data management and governance, as well as improve the data quality and consistency. Reference:
