From related websites or books, you might also see some of the training materials, but ExamsReviews's information about ISQI Certification CTFL-AcT Exam is the most comprehensive, and can give you the best protection. Candidates who participate in the ISQI certification CTFL-AcT exam should select exam practice questions and answers of ExamsReviews, because ExamsReviews is the best choice for you.

ISQI ISTQB Foundation Level - Acceptance Testing Sample Questions (Q69-Q74):

NEW QUESTION # 69

Which of the following sentences explains BEST how business process and business rule modeling can be used for ATDD?

- A. In an ATDD approach, business process models replace acceptance criteria.
- B. In an ATDD approach, business process/rule models must be created before the project starts.
- C. In an ATDD approach, testers use business process and business rule models to generate acceptance tests.
- D. In an ATDD approach, process models are created for initial test design but are not maintained afterwards.

Answer: C

Explanation:

Acceptance Test-Driven Development (ATDD) is a collaborative approach in which acceptance criteria are defined early, often before implementation starts. Business process models (e.g., BPMN) and business rule models (e.g., DMN) are essential tools to formalize how the system should behave under various conditions.

In ATDD, these models provide a structured representation of system workflows and decision logic, which can then be used by testers and stakeholders to derive or generate acceptance tests. This ensures that testing is aligned with actual business processes and requirements.

Option C is correct because it aligns with the purpose of ATDD: to use business models as a foundation for deriving acceptance tests in collaboration with business analysts, testers, and developers.

Other options:

A is incorrect - models are created as part of the project, not necessarily before it starts.

B is incorrect - models support and clarify acceptance criteria; they do not replace them.

D is incorrect - models are maintained as living documentation, especially in agile and iterative approaches.

C). In an ATDD approach, testers use business process and business rule models to generate acceptance tests.

NEW QUESTION # 70

As an acceptance tester you are analyzing the following user story for a computer web-based mass multiplayer role-playing game:

As an unregistered player

I want to be able to register myself by defining my e-mail, login and password in a registration form so that I become a registered player Consider the following propositions of the acceptance criteria:

i. a registration form is displayed on the screen.

ii. the form is written in the Groovy language; the cursor is initially set on the 'login' field; after pushing the TAB button the cursor switches to 'password', 'repeat password', 'mail', and 'repeat mail' forms.

iii. I cannot register myself if the login I choose is used by another player.

iv. after successful registration process I am informed about it by an e-mail.

Which of the above statements would you consider as well-written acceptance criteria?

- A. only i), iii) and iv)
- B. only i) and iii)
- C. only ii) and iv)
- D. only ii)

Answer: A

NEW QUESTION # 71

Which one of the following statements regarding ATDD / BDD is true?

- A. With visual ATDD, acceptance test cases are obtained from a graphical representation of application
