最新的 Salesforce Architect Sharing-and-Visibility-Architect 免費考試真題 (Q57-Q62):

問題 #57

A Sales Rep at Universal Containers wants to create a dashboard to see how his sales numbers compare with his peers. Assuming a private model, which two permissions would the Sales Rep need to meet this requirement?

- A. Customize Application
- **B. Manage Dashboards**
- C. Manage Custom Report Types
- **D. View All Data**

答案: **B,D**

解題說明:

Explanation

According to this source, the Manage Dashboards permission allows users to create, edit, and delete dashboards in any folder they have access to, and the View All Data permission allows users to view all data in the org regardless of sharing settings. The other options are not necessary for creating a dashboard to compare sales numbers.

問題 #58

The sales manager in Japan have asked the sales manager in Australia to assist them with closing their deals. How are these requirements achieved?

- A. Assign the sales manager View All on the opportunity object.
- B. Use sharing set to give the sales manager access to the deals.
- C. Create ownership-based sharing rule.
- **D. Use opportunity teams to automatically add the sales manager as a team member.**

答案: **D**

問題 #59

A user posts a file to the Chatter feed for a record of an object that has a Private organization-wide default. Which statement accurately describes who can view the file by default?

- **A. The user who posted the file and users with access to the record**
- B. The user who posted the file and users with a shared chatter post link to the file
- C. Only the user who posted the file

答案: **A**

問題 #60

When you make changes to roles and groups Salesforce locks the entire group membership table, which makes it impossible to process group changes in multiple threads to increase throughput on updates.

答案:

解題說明:

Granular Locking

Explanation

The term that describes the situation when you make changes to roles and groups Salesforce locks the entire group membership table is Granular Locking. Granular Locking is a feature that improves the concurrency and performance of sharing operations by locking only the affected nodes in the role or territory hierarchy, instead of locking the entire hierarchy. This allows multiple sharing operations to run in parallel without causing lock contention or blocking each other.

問題 #61

Universal Containers would like to control access to records and objects according to the following business requirements:*

- * Sales users can view all Account records but only edit their own records.

- * Sales managers view all Account records but only edit records of the team.

- * Service users can view all Account records that are not marked with a RecordType of Prospect.

Which organization-wide default configuration should a Salesforce architect recommend to fulfill these requirements?

- A. Public Read/Transfer
- **B. Public Read Only**
- C. Private
- D. Public Read Write

答案： B

解題說明：

Explanation

Public Read Only is the best organization-wide default configuration to fulfill the requirements. Public Read Only means that all users can view all records, but only the owners and those above them in the role hierarchy can edit them. This matches the requirements for sales users and sales managers. For service users, a record type-based sharing rule can be created to restrict their access to accounts with a RecordType of Prospect.

Public Read Write, Private, and Public Read/Transfer are not suitable configurations for the requirements.
