

Portworx-Enterprise-Professional Buch & Portworx-Enterprise-Professional Lernhilfe

Wir ZertSoft sind eine professionelle Website. Wir bieten jedem Teilnehmer guten Service, sowie Vor-Sales-Service und Nach-Sales-Service. Wenn Sie Pure Storage Portworx-Enterprise-Professional Zertifizierungsunterlagen von ZertSoft wollen, können Sie zuerst das kostenlose Demo benutzen. Sie können sich fühlen, ob die Unterlagen sehr geeignet sind. Damit können Sie die Qualität unserer Pure Storage Portworx-Enterprise-Professional Prüfungsunterlagen überprüfen und dann sich entscheiden für den Kauf. Falls Sie dabei durchgefallen wären, geben wir Ihnen voll Geld zurück. Oder Sie können wieder einjährige kostenlose Aktualisierung auswählen.

Pure Storage Portworx-Enterprise-Professional Prüfungsplan:

Thema	Einzelheiten
Thema 1	• Security: This section focuses on Security Engineers and Compliance Officers responsible for enforcing security measures in container storage environments. Topics include managing encryption, access control, and compliance policies to protect stored data.
Thema 2	• Business Continuity: This domain measures the skills of Disaster Recovery Planners and IT Continuity Managers in implementing backup, recovery, and failover strategies. It ensures candidates understand how to sustain business operations and data availability using Portworx features.
Thema 3	• Observability and Troubleshooting: This section assesses the expertise of Support Engineers and System Administrators in monitoring storage deployments and troubleshooting issues. Candidates learn to use observability tools and techniques to maintain system health and resolve performance problems effectively.
Thema 4	• Operations and Administration: This section of the exam measures the skills of Storage Administrators and Kubernetes Operators and covers managing cluster operations and administering container storage environments using Portworx. Candidates demonstrate the ability to efficiently manage and operate storage clusters in production environments.
Thema 5	• Deploy and Install: This domain targets DevOps Engineers and Infrastructure Specialists and focuses on deploying and installing Portworx storage solutions. It includes configuring and setting up storage clusters to support containerized applications reliably and securely.

Portworx-Enterprise-Professional Lernhilfe, Portworx-Enterprise-Professional Dumps

Wenn Sie sich noch Sorgen um die Pure Storage Portworx-Enterprise-Professional Prüfung machen, wählen Sie doch ZertSoft. Die Fragenkataloge zur Pure Storage Portworx-Enterprise-Professional Prüfung von ZertSoft sind zweifellos die besten. ZertSoft ist Ihre beste Wahl und garantiert Ihnen den 100% Erfolg in der Portworx-Enterprise-Professional Zertifizierungsprüfung. Komm doch, Sie werden der zukünftige beste IT-Expert.

Pure Storage Pure Certified Portworx Enterprise Professional (PEP) Exam Portworx-Enterprise-Professional Prüfungsfragen mit Lösungen (Q12-Q17):

12. Frage

What is the correct procedure to upgrade a Portworx cluster from version 3.0 to 3.1 using the Portworx Operator?

- A. No manual upgrade is needed as Portworx will automatically upgrade to the latest version.
- **B. Edit the StorageCluster CR and update the .spec.image parameter from portworx/oci-monitor:3.0 to portworx/oci-monitor:3.1.**
- C. Execute the 'pxctl cluster upgrade -version 3.1' command.

Antwort: B

Begründung:

Comprehensive and Detailed Explanation From Exact Extract:

Upgrading Portworx clusters managed by the Kubernetes Operator requires a declarative update to the StorageCluster Custom Resource Definition (CRD). Specifically, the administrator must edit the StorageCluster resource and update the .spec.image field to point to the new version image, such as changing portworx/oci-monitor:3.0 to portworx/oci-monitor:3.1. This change instructs the Operator to roll out the new image across the cluster nodes, performing a seamless upgrade with minimal downtime. The pxctl CLI does not perform upgrades in Operator-managed environments; it is primarily for direct cluster management. The Operator ensures orderly upgrade sequencing, node by node, handling pod restarts and health checks. Automatic upgrades without manual intervention are not currently supported to prevent unintentional disruptions. Official Portworx upgrade documentation details this procedure, emphasizing the importance of version pinning and controlled rollout for production stability and rollback capabilities during upgrades **【Pure Storage Portworx Upgrade Guide source】**.

13. Frage

What step is necessary to start using encrypted PVCs in Portworx?

- A. Configure IO profiles.
- B. StorageClass needs the following parameter: secure: enabled.
- **C. Select secret provider.**

Antwort: C

Begründung:

Comprehensive and Detailed Explanation From Exact Extract:

Using encrypted Persistent Volume Claims (PVCs) with Portworx requires that an administrator first configure a secret provider responsible for managing the encryption keys. The secret provider could be an external Key Management System (KMS) such as AWS KMS, Google Cloud KMS, Hashicorp Vault, or Kubernetes Secrets. This step is critical because encryption keys are essential to securely encrypt and decrypt data on volumes. Although enabling encryption in the StorageClass via parameters like secure: enabled is necessary to activate encryption on volumes, it is insufficient without a properly configured secret provider to manage the keys. The secret provider ensures keys are securely stored, rotated, and accessed, fulfilling compliance and security requirements. Portworx documentation stresses this as a foundational step to enable encrypted PVCs, highlighting that without a configured secret provider, encrypted volumes cannot be provisioned or used effectively **【Pure Storage Portworx Encryption Docs source】**.

14. Frage

What configuration steps should a Portworx Administrator perform to ensure that Portworx can use the S3 Object Store using a custom/3rd party (not signed by public CA) certificate?

- A. Create a secret containing the certificate and run `pxctl certificate import` command.
- **B. Create a Kubernetes secret containing the certificate and reference it in the storagecluster via env variable.**
- C. No additional configuration is necessary.

Antwort: B

Begründung:

Comprehensive and Detailed Explanation From Exact Extract:

When integrating Portworx with an S3 Object Store secured by a custom or third-party certificate that is not signed by a public Certificate Authority (CA), administrators must manually provide the relevant CA certificate to Portworx. This involves creating a Kubernetes secret that contains the custom CA certificate and referencing this secret in the StorageCluster manifest through environment variables. This allows Portworx components to trust the certificate during TLS handshake with the S3 endpoint, avoiding connection failures due to untrusted certificates. Without this step, Portworx cannot securely communicate with the object store. The Portworx security and installation documentation highlights this practice as essential for secure Object Store integration in private or regulated environments where internal or custom PKIs are used **【Pure Storage Portworx Security Guide source】**.

15. Frage

An administrator wants to check the size, availability, and usage of all pools in the cluster.

Which command should the administrator use?

- A. `pxctl cluster provision-status`
- B. `kubectl get storagecluster`
- **C. `pxctl service pool show`**

Antwort: C

Begründung:

Comprehensive and Detailed Explanation From Exact Extract:

To view detailed information about storage pools in a Portworx cluster-including size, availability, usage, and health-administrators should use the command `pxctl service pool show`. This CLI command provides a comprehensive overview of all storage pools configured on cluster nodes, including pool IDs, device names, pool sizes, free space, and status. It helps administrators monitor resource utilization, detect degraded pools, and plan capacity expansions. While `kubectl get storagecluster` shows the overall cluster CRD status and `pxctl cluster provision-status` shows provisioning status, neither provides detailed pool-level insights. Portworx's operational documentation recommends `pxctl service pool show` as the definitive command for monitoring pool resources and ensuring storage health across the cluster **【Pure Storage Portworx CLI Guide source】**.

16. Frage

Which command shows a summary of the Portworx cluster status?

- **A. `pxctl cluster status`**
- B. `helm list --px`
- C. `kubectl get pxstatus`

Antwort: A

Begründung:

Comprehensive and Detailed Explanation From Exact Extract:

The command `pxctl cluster status` provides a concise summary of the Portworx cluster's health and operational status. This includes node states, storage pool information, volume statuses, and quorum information. It is the primary CLI command for administrators to quickly assess cluster health and detect any issues affecting storage availability or performance. `helm list --px` is a Helm package management command unrelated to cluster status, and `kubectl get pxstatus` is not a valid Kubernetes or Portworx command. Portworx documentation recommends `pxctl cluster status` as an essential monitoring command during routine operations and troubleshooting to ensure the cluster is functioning properly and that all nodes are communicating and healthy **【Pure Storage Portworx CLI Guide source】**

17. Frage

.....

ZertSoft ist eine spezielle Website, die Schulungsunterlagen zur Pure Storage Portworx-Enterprise-Professional Zertifizierungsprüfung bietet. Hier werden Ihre Fachkenntnisse nicht nur befördert werden. Und Sie können auch die Prüfung einmalig bestehen. Die Schulungsunterlagen von ZertSoft werden von den erfahrungsreichen Fachleuten nach ihren Erfahrungen und Kenntnissen bearbeitet. Sie sind von guter Qualität und extrem genau. ZertSoft wird Ihnen helfen, nicht nur die Pure Storage Portworx-Enterprise-Professional Zertifizierungsprüfung zu bestehen, sondern auch Ihre Fachkenntnisse zu konsolidieren. Außerdem genießen Sie einen einjährigen Update-Service.
