## Exam Discount HPE7-A06 Voucher, HPE7-A06 Reliable Test Braindumps

To pass the HP HPE7-A06 Exam is a dream who are engaged in IT industry. If you want to change the dream into reality, you only need to choose the professional training. PracticeTorrent is a professional website that providing IT certification training materials.

Select PracticeTorrent, it will ensure your success. No matter how high your pursuit of the goal, PracticeTorrent will make your dreams become a reality.

## HPE Campus Access Switching Expert Written Exam Sample Questions (Q95-Q100):

### NEW QUESTION # 95

An OSPF router has learned a path to an external network by both an E1 and E2 advertisement, both routes having the same path cost.

Which path will the router prefer?

- A. The router will use both paths equally by means of ECMP.
- **B. The router will prefer the E1 path.**
- C. The router will prefer the E2 path.
- D. Both routes will be suppressed until the path conflict has been resolved.

**Answer: B**

Explanation:

When both OSPF E1 (External Type 1) and E2 (External Type 2) routes exist to the same destination with equal cost, the router always prefers the E1 path. This is because E1 routes include both the external cost and the internal OSPF cost to reach the ASBR, making them more accurate for path selection.

### NEW QUESTION # 96

Security administrators are complaining about the number of HPE Aruba Networking ClearPass Access Tracker events from the user 'radius-test'. Given the configuration below, how can the number of events be reduced?

```
radius-server tracking user-name radius-test password plaintext Aruba123!  
radius-server host 10.1.1.1 tracking enable
```

- A. Configure 'any' tracking mode.
- **B. Configure 'dead-only' tracking mode.**
- C. Decrease the tracking retries.
- D. Increase the tracking interval.

**Answer: B**

Explanation:

The configuration shown enables RADIUS server tracking using the test user radius-test. By default, this generates continuous Access Tracker events because every probe attempt is logged.

To reduce the number of events, the tracking mode should be changed to dead-only, which limits authentication probes to when the RADIUS server is marked as unreachable. This way, ClearPass only sees test authentications when a failure condition occurs, significantly reducing unnecessary log entries.

### NEW QUESTION # 97

Drag and Drop Question

Match the BGP connection states to the conditions that could have caused that state.

- active
- connect
- established
- idle

**Answer Area**

The last keepalive is less than 3 times the negotiated holddown timer.

The router has not received a response. The neighbor might be unreachable.

The router is waiting for an initial response from the neighbor.

The router starts listening for a connection.

**Answer:**

**Explanation:**

**Answer Area**

The last keepalive is less than 3 times the negotiated holddown timer. established

The router has not received a response. The neighbor might be unreachable. active

The router is waiting for an initial response from the neighbor. connect

The router starts listening for a connection. idle

**NEW QUESTION # 98**

Refer to the exhibit.

```

sw-8551(Config)# show vsx status
VSX Operational State
-----
ISL channel           : In-Sync
ISL mgmt channel     : operational
Config Sync Status   : sw_image_version_mismatch_error
NAE                   : sw_image_version_mismatch_error
HTTPS Server         : sw_image_version_mismatch_error

Attribute             Local                Peer
-----
ISL link              lag256              lag256
ISL version           2                   2
System MAC            02:00:00:00:00:01  02:00:00:00:00:01
Platform              8325                8325
Software Version     GL.10.09.0010       GL.10.11.1021
Device Role           primary              secondary
  
```

Based on the screenshot, what is required to bring the secondary switch MCLAG interfaces online?

- A. Use vsx-software-upgrade on the secondary.
- **B. Use the same CX OS version as on the primary.**
- C. Update the NAE agents on the secondary.
- D. Use the same ServiceOS version as on the primary.

**Answer: B**

**Explanation:**

The error messages (sw\_image\_version\_mismatch\_error) in the VSX status output indicate that the primary (GL.10.09.0010) and secondary (GL.10.11.1021) switches are running different AOS- CX software versions. For VSX peers to synchronize and bring

MCLAG interfaces online, both devices must run the same AOS-CX software version.

### NEW QUESTION # 99

A user cannot connect to the wired network using 802.1X with EAP-TLS. The user's device is configured correctly and the user has a valid certificate. The RADIUS server logs show that the user is authenticating successfully.

What could be the reason for this issue?

- A. The RADIUS server is not configured to use EAP-TLS.
- **B. There is an issue with the switch interface configuration.**
- C. The switch is not configured to use EAP-TLS.
- D. The user's device is not using the correct certificate authority.

**Answer: B**

Explanation:

Since the RADIUS logs show successful authentication with a valid certificate, EAP-TLS is functioning properly between the client and the RADIUS server. If the user still cannot connect, the issue is most likely with the switch interface configuration (e.g., missing VLAN assignment, incorrect role, or port-access settings), which prevents network access after successful authentication.

### NEW QUESTION # 100

.....

Do you want to pass your exam with the least time? If you do, then we will be your best choice. HPE7-A06 training materials are edited and verified by experienced experts in this field, therefore the quality and accuracy can be guaranteed. Besides HPE7-A06 exam materials contain both questions and answers, and it's convenient for you to have a check after practicing. We have online and offline chat service, if you have any questions about HPE7-A06 Training Materials, you can consult us, we will give you reply as quickly as possible.
